

Ruby - Bug #11937

did_you_mean and other bundled gems are not installed by make install

01/01/2016 12:08 PM - Eregon (Benoit Daloze)

Status:	Closed	
Priority:	Normal	
Assignee:		
Target version:		
ruby -v:	ruby 2.4.0dev (2015-12-30 trunk 53388) [x86_64-linux]	Backport: 2.0.0: UNKNOWN, 2.1: UNKNOWN, 2.2: UNKNOWN, 2.3: UNKNOWN
Description did_you_mean and other bundled gems are not installed when doing a regular local build: <pre>autoconf ./configure --prefix=... make install .../bin/ruby -e 'require "did_you_mean"' => LoadError</pre> make update-gems before make install will make it work, but this should be automatic (if no gems in gems/, download them and when gems/bundled_gems change fetch the new ones) or at least documented.

Doesn't make up do it?

I guess it would, however I think there are two problems:

1. Why and when should I do a make up?
And where is it documented it should be part of the the build process? (make help does not mention it for instance)
2. It does currently not work for me:

```
$ make up
```

Network connection closed unexpectedly: Unable to connect to a repository at URL 'svn+ssh://svn@ci.ruby-lang.org/ruby': To better debug SSH connection problems, remove the -q option from 'ssh' in the [tunnels] section of your Subversion configuration file. at /usr/share/perl5/vendor_perl/Git/SVN.pm line 712.

```
Makefile:465: recipe for target 'up' failed
make: *** [up] Error 1
```

About 2) it's due to [#11876](#), so after updating the keys it seems to work.

make up is a trigger to update via the network.

Other targets would not access remote hosts, except for some necessary files (config.guess and config.sub).

And where is it documented it should be part of the the build process? (make help does not mention it for instance)

Thank you, I've missed it.
