- bool **operator>** (const [type\\_index](#) &\_\_rhs) const noexcept
- bool **operator>=** (const [type\\_index](#) &\_\_rhs) const noexcept

### 5.1071.1 Detailed Description

#### Class `type_index`

The class `type_index` provides a simple wrapper for `type_info` which can be used as an index type in associative containers (23.6) and in unordered associative containers (23.7).

Definition at line 52 of file `typeidindex`.

The documentation for this struct was generated from the following file:

- [typeidindex](#)

### 5.1072 `std::type_info` Class Reference

Inherited by `__cxxabiv1::__array_type_info`, `__cxxabiv1::__class_type_info`, `__cxxabiv1::__enum_type_info`, `__cxxabiv1::__function_type_info`, `__cxxabiv1::__fundamental_type_info`, and `__cxxabiv1::__pbase_type_info`.

#### Public Member Functions

- virtual `~type_info` ()
- virtual bool `__do_catch` (const `type_info` \* \_\_thr\_type, void \*\* \_\_thr\_obj, unsigned \_\_outer) const
- virtual bool `__do_upcast` (const `__cxxabiv1::__class_type_info` \* \_\_target, void \*\* \_\_obj\_ptr) const
- virtual bool `__is_function_p` () const
- virtual bool `__is_pointer_p` () const
- bool `before` (const `type_info` & \_\_arg) const noexcept
- size\_t `hash_code` () const noexcept
- const char \* `name` () const noexcept
- bool `operator!=` (const `type_info` & \_\_arg) const noexcept
- bool `operator==` (const `type_info` & \_\_arg) const noexcept

#### Protected Member Functions

- `type_info` (const char \* \_\_n)

#### Protected Attributes

- const char \* `__name`

### 5.1072.1 Detailed Description

Part of RTTI.

The `type_info` class describes type information generated by an implementation.

Definition at line 88 of file `typeinfo`.

## 5.1072.2 Constructor &amp; Destructor Documentation

## 5.1072.2.1 ~type\_info()

```
virtual std::type_info::~~type_info ( ) [virtual]
```

Destructor first. Being the first non-inline virtual function, this controls in which translation unit the vtable is emitted. The compiler makes use of that information to know where to emit the runtime-mandated type\_info structures in the new-abi.

## 5.1072.3 Member Function Documentation

## 5.1072.3.1 name()

```
const char* std::type_info::name ( ) const [inline], [noexcept]
```

Returns an *implementation-defined* byte string; this is not portable between compilers!

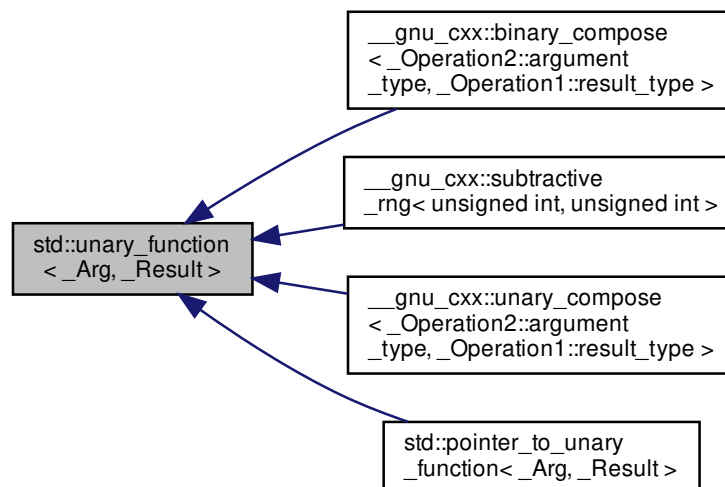

Definition at line 99 of file typeinfo.

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.1073 std::unary\_function&lt;\_Arg, \_Result&gt; Struct Template Reference

Inheritance diagram for std::unary\_function<\_Arg, \_Result>:

## Public Types

- typedef `_Arg` [argument\\_type](#)
- typedef `_Result` [result\\_type](#)

### 5.1073.1 Detailed Description

```
template<typename _Arg, typename _Result>
struct std::unary_function< _Arg, _Result >
```

This is one of the [functor base classes](#).

Definition at line 105 of file `stl_function.h`.

### 5.1073.2 Member Typedef Documentation

#### 5.1073.2.1 `argument_type`

```
template<typename _Arg, typename _Result>
typedef _Arg std::unary\_function< \_Arg, \_Result >::argument\_type
```

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

#### 5.1073.2.2 `result_type`

```
template<typename _Arg, typename _Result>
typedef _Result std::unary\_function< \_Arg, \_Result >::result\_type
```

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.1074 std::unary\_negate&lt; \_Predicate &gt; Class Template Reference

Inheritance diagram for std::unary\_negate< \_Predicate >:

## Public Types

- typedef `_Predicate::argument_type` [argument\\_type](#)
- typedef `bool` [result\\_type](#)

## Public Member Functions

- `_GLIBCXX14_CONSTEXPR` **unary\_negate** (`const _Predicate &__x`)
- `_GLIBCXX14_CONSTEXPR` `bool` **operator()** (`const typename _Predicate::argument_type &__x`) `const`

## Protected Attributes

- `_Predicate` **\_M\_pred**

## 5.1074.1 Detailed Description

```
template<typename _Predicate>
class std::unary_negate< _Predicate >
```

One of the [negation functors](#).

Definition at line 979 of file `stl_function.h`.

## 5.1074.2 Member Typedef Documentation

### 5.1074.2.1 `argument_type`

```
typedef _Predicate::argument_type std::unary_function< _Predicate::argument_type , bool >::argument_type  
[inherited]
```

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

### 5.1074.2.2 `result_type`

```
typedef bool std::unary_function< _Predicate::argument_type , bool >::result_type [inherited]
```

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.1075 `std::underflow_error` Class Reference

Inheritance diagram for `std::underflow_error`:

### Public Member Functions

- **`underflow_error`** (const [string](#) &\_\_arg) \_GLIBCXX\_TXN\_SAFE
- **`underflow_error`** (const char \*) \_GLIBCXX\_TXN\_SAFE
- virtual const char \* [what](#) () const \_GLIBCXX\_TXN\_SAFE\_DYN noexcept

## 5.1075.1 Detailed Description

Thrown to indicate arithmetic underflow.

Definition at line 252 of file `stdexcept`.

## 5.1075.2 Member Function Documentation

5.1075.2.1 `what()`

```
virtual const char* std::runtime_error::what ( ) const [virtual], [noexcept], [inherited]
```

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

5.1076 `std::underlying_type<_Tp>` Struct Template Reference

## Public Member Functions

- `typedef __underlying_type (_Tp) type`

## 5.1076.1 Detailed Description

```
template<typename _Tp>  
struct std::underlying_type<_Tp>
```

The underlying type of an enum.

Definition at line 2000 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

5.1077 `std::uniform_int_distribution<_IntType>` Class Template Reference

## Classes

- struct [param\\_type](#)

## Public Types

- typedef `_IntType` `result_type`

## Public Member Functions

void `__generate` (`result_type *__f, result_type *__t, _UniformRandomNumberGenerator &__urng, const param_type &__p`)
- `result_type a` () const
- `result_type b` () const
- `result_type max` () const
- `result_type min` () const
- template<typename `_UniformRandomNumberGenerator` >  
`result_type operator()` (`_UniformRandomNumberGenerator &__urng`)
- template<typename `_UniformRandomNumberGenerator` >  
`result_type operator()` (`_UniformRandomNumberGenerator &__urng, const param_type &__p`)
- `param_type param` () const
- void `param` (const `param_type` &\_\_param)
- void `reset` ()

## Friends

- bool `operator==` (const `uniform_int_distribution` &\_\_d1, const `uniform_int_distribution` &\_\_d2)

## 5.1077.1 Detailed Description

```
template<typename _IntType = int>
class std::uniform_int_distribution< _IntType >
```

Uniform discrete distribution for random numbers. A discrete random distribution on the range  $[min, max]$  with equal probability throughout the range.

Definition at line 58 of file `uniform_int_dist.h`.

## 5.1077.2 Member Typedef Documentation

### 5.1077.2.1 `result_type`

```
template<typename _IntType = int>
typedef _IntType std::uniform_int_distribution< _IntType >::result_type
```

The type of the range of the distribution.

Definition at line 61 of file `uniform_int_dist.h`.

## 5.1077.3 Constructor & Destructor Documentation

### 5.1077.3.1 `uniform_int_distribution()`

```
template<typename _IntType = int>
std::uniform_int_distribution< _IntType >::uniform_int_distribution (
    _IntType __a = 0,
    _IntType __b = std::numeric_limits<_IntType>::max() ) [inline], [explicit]
```

Constructs a uniform distribution object.

Definition at line 105 of file `uniform_int_dist.h`.

## 5.1077.4 Member Function Documentation

### 5.1077.4.1 `max()`

```
template<typename _IntType = int>
result_type std::uniform_int_distribution< _IntType >::max ( ) const [inline]
```

Returns the inclusive upper bound of the distribution range.

Definition at line 157 of file `uniform_int_dist.h`.

### 5.1077.4.2 `min()`

```
template<typename _IntType = int>
result_type std::uniform_int_distribution< _IntType >::min ( ) const [inline]
```

Returns the inclusive lower bound of the distribution range.

Definition at line 150 of file `uniform_int_dist.h`.

#### 5.1077.4.3 operator()

```
template<typename _IntType = int>
template<typename _UniformRandomNumberGenerator >
result_type std::uniform_int_distribution< _IntType >::operator() (
    _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.

Definition at line 165 of file uniform\_int\_dist.h.

#### 5.1077.4.4 param() [1/2]

```
template<typename _IntType = int>
param_type std::uniform_int_distribution< _IntType >::param ( ) const [inline]
```

Returns the parameter set of the distribution.

Definition at line 135 of file uniform\_int\_dist.h.

Referenced by std::operator>>().

#### 5.1077.4.5 param() [2/2]

```
template<typename _IntType = int>
void std::uniform_int_distribution< _IntType >::param (
    const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

##### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

Definition at line 143 of file uniform\_int\_dist.h.

#### 5.1077.4.6 reset()

```
template<typename _IntType = int>
void std::uniform_int_distribution< _IntType >::reset ( ) [inline]
```

Resets the distribution state.

Does nothing for the uniform integer distribution.

Definition at line 121 of file uniform\_int\_dist.h.

## 5.1077.5 Friends And Related Function Documentation

## 5.1077.5.1 operator==

```
template<typename _IntType = int>
bool operator== (
    const uniform_int_distribution< _IntType > & __d1,
    const uniform_int_distribution< _IntType > & __d2 ) [friend]
```

Return true if two uniform integer distributions have the same parameters.

Definition at line 200 of file uniform\_int\_dist.h.

The documentation for this class was generated from the following file:

- [uniform\\_int\\_dist.h](#)

## 5.1078 std::uniform\_int\_distribution&lt; \_IntType &gt;::param\_type Struct Reference

## Public Types

### Friends

- bool **operator==** (const [uniform\\_real\\_distribution](#) &\_\_d1, const [uniform\\_real\\_distribution](#) &\_\_d2)

### 5.1079.1 Detailed Description

```
template<typename _RealType = double>
class std::uniform_real_distribution< _RealType >
```

Uniform continuous distribution for random numbers.

A continuous random distribution on the range [min, max) with equal probability throughout the range. The URNG should be real-valued and deliver number in the range [0, 1).

Definition at line 1702 of file random.h.

## 5.1079.2 Member Typedef Documentation

5.1079.2.1 `result_type`

```
template<typename _RealType = double>
typedef _RealType std::uniform_real_distribution< _RealType >::result_type
```

The type of the range of the distribution.

Definition at line 1705 of file `random.h`.

## 5.1079.3 Constructor &amp; Destructor Documentation

5.1079.3.1 `uniform_real_distribution()`

```
template<typename _RealType = double>
std::uniform_real_distribution< _RealType >::uniform_real_distribution (
    _RealType __a = _RealType(0),
    _RealType __b = _RealType(1) ) [inline], [explicit]
```

Constructs a `uniform_real_distribution` object.

## Parameters

<code>↔</code> __a	[IN] The lower bound of the distribution.
<code>↔</code> __b	[IN] The upper bound of the distribution.

Definition at line 1753 of file `random.h`.

## 5.1079.4 Member Function Documentation

5.1079.4.1 `max()`

```
template<typename _RealType = double>
result_type std::uniform_real_distribution< _RealType >::max ( ) const [inline]
```

Returns the inclusive upper bound of the distribution range.

Definition at line 1805 of file `random.h`.

#### 5.1079.4.2 min()

```
template<typename _RealType = double>
result_type std::uniform_real_distribution< _RealType >::min ( ) const [inline]
```

Returns the inclusive lower bound of the distribution range.

Definition at line 1798 of file random.h.

#### 5.1079.4.3 operator>()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator >
result_type std::uniform_real_distribution< _RealType >::operator() (
    _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.

Definition at line 1813 of file random.h.

#### 5.1079.4.4 param() [1/2]

```
template<typename _RealType = double>
param_type std::uniform_real_distribution< _RealType >::param ( ) const [inline]
```

Returns the parameter set of the distribution.

Definition at line 1783 of file random.h.

Referenced by std::operator>>().

#### 5.1079.4.5 param() [2/2]

```
template<typename _RealType = double>
void std::uniform_real_distribution< _RealType >::param (
    const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

##### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

Definition at line 1791 of file random.h.

#### 5.1079.4.6 `reset()`

```
template<typename _RealType = double>
void std::uniform_real_distribution<_RealType>::reset ( ) [inline]
```

Resets the distribution state.

Does nothing for the uniform real distribution.

Definition at line 1769 of file `random.h`.

### 5.1079.5 Friends And Related Function Documentation

#### 5.1079.5.1 `operator==`

```
template<typename _RealType = double>
bool operator== (
    const uniform_real_distribution<_RealType> & __d1,
    const uniform_real_distribution<_RealType> & __d2 ) [friend]
```

Return true if two uniform real distributions have the same parameters.

Definition at line 1853 of file `random.h`.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

### 5.1080 `std::uniform_real_distribution<_RealType>::param_type` Struct Reference

#### Public Types

- typedef `uniform_real_distribution<_RealType>` **distribution\_type**

#### Public Member Functions

- void **unlock** ()

## 5.1081.1 Detailed Description

```
template<typename _Mutex>
class std::unique_lock< _Mutex >
```

A movable scoped lock type.

A `unique_lock` controls mutex ownership within a scope. Ownership of the mutex can be delayed until after construction and can be transferred to another `unique_lock` by move construction or move assignment. If a mutex lock is owned when the destructor runs ownership will be released.

Definition at line 185 of file `std_mutex.h`.

The documentation for this class was generated from the following file:

- [std\\_mutex.h](#)

### 5.1082.1 Detailed Description

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
class std::unique_ptr< _Tp, _Dp >
```

20.7.1.2 `unique_ptr` for single objects.

Definition at line 168 of file `unique_ptr.h`.

### 5.1082.2 Constructor & Destructor Documentation

#### 5.1082.2.1 `unique_ptr()` [1/7]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>>
constexpr std::unique_ptr< _Tp, _Dp >::unique_ptr ( ) [inline], [noexcept]
```

Default constructor, creates a `unique_ptr` that owns nothing.

Definition at line 194 of file `unique_ptr.h`.

#### 5.1082.2.2 `unique_ptr()` [2/7]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>>
std::unique_ptr< _Tp, _Dp >::unique_ptr (
    pointer __p ) [inline], [explicit], [noexcept]
```

Takes ownership of a pointer.

## Parameters

<a href="#"></a> <code>__p</code>	A pointer to an object of <code>element_type</code>
---	---

The deleter will be value-initialized.

Definition at line 207 of file `unique_ptr.h`.

## 5.1082.2.3 unique\_ptr() [3/7]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
std::unique_ptr< _Tp, _Dp >::unique_ptr (
    pointer __p,
    typename conditional< is_reference< deleter_type >::value, deleter_type, const deleter↵
_type & >::type __d ) [inline], [noexcept]
```

Takes ownership of a pointer.

## Parameters

<a href="#"></a> <code>__p</code>	A pointer to an object of <code>element_type</code>
<a href="#"></a> <code>__d</code>	A reference to a deleter.

The deleter will be initialized with `__d`

Definition at line 218 of file `unique_ptr.h`.

## 5.1082.2.4 unique\_ptr() [4/7]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
std::unique_ptr< _Tp, _Dp >::unique_ptr (
    pointer __p,
    typename remove_reference< deleter_type >::type && __d ) [inline], [noexcept]
```

Takes ownership of a pointer.

## Parameters

<a href="#"></a> <code>__p</code>	A pointer to an object of <code>element_type</code>
<a href="#"></a> <code>__d</code>	An rvalue reference to a deleter.

The deleter will be initialized with `std::move(__d)`

Definition at line 230 of file `unique_ptr.h`.

#### 5.1082.2.5 `unique_ptr()` [5/7]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>>
constexpr std::unique_ptr<_Tp, _Dp>::unique_ptr (
    nullptr_t ) [inline], [noexcept]
```

Creates a `unique_ptr` that owns nothing.

Definition at line 239 of file `unique_ptr.h`.

#### 5.1082.2.6 `unique_ptr()` [6/7]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
std::unique_ptr<_Tp, _Dp>::unique_ptr (
    unique_ptr<_Tp, _Dp> && __u ) [inline], [noexcept]
```

Move constructor.

Definition at line 244 of file `unique_ptr.h`.

#### 5.1082.2.7 `unique_ptr()` [7/7]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
template<typename _Up, typename _Ep, typename = _Require<__safe_conversion_up<_Up, _Ep>,
typename conditional<is_reference<_Dp>::value, is_same<_Ep, _Dp>, is_convertible<_Ep, _Dp>><
::type>>>
std::unique_ptr<_Tp, _Dp>::unique_ptr (
    unique_ptr<_Up, _Ep> && __u ) [inline], [noexcept]
```

Converting constructor from another type.

Requires that the pointer owned by `__u` is convertible to the type of pointer owned by this object, `__u` does not own an array, and `__u` has a compatible deleter type.

Definition at line 258 of file `unique_ptr.h`.

### 5.1082.2.8 ~unique\_ptr()

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
std::unique_ptr<_Tp, _Dp>::~~unique_ptr ( ) [inline], [noexcept]
```

Destructor, invokes the deleter if the stored pointer is not null.

Definition at line 273 of file unique\_ptr.h.

## 5.1082.3 Member Function Documentation

### 5.1082.3.1 get()

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
pointer std::unique_ptr<_Tp, _Dp>::get (
    void ) const [inline], [noexcept]
```

Return the stored pointer.

Definition at line 345 of file unique\_ptr.h.

Referenced by std::unique\_ptr<\_Result<\_Res>>::operator bool(), std::unique\_ptr<\_Tp[], \_Dp>::operator bool(), std::unique\_ptr<\_Result<\_Res>>::release(), and std::unique\_ptr<\_Tp[], \_Dp>::release().

### 5.1082.3.2 get\_deleter() [1/2]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
deleter_type& std::unique_ptr<_Tp, _Dp>::get_deleter ( ) [inline], [noexcept]
```

Return a reference to the stored deleter.

Definition at line 350 of file unique\_ptr.h.

Referenced by std::unique\_ptr<\_Result<\_Res>>::operator=(), std::unique\_ptr<\_Tp[], \_Dp>::operator=(), std::unique\_ptr<\_Result<\_Res>>::reset(), std::unique\_ptr<\_Tp[], \_Dp>::reset(), std::unique\_ptr<\_Result<\_Res>>::~~unique\_ptr(), and std::unique\_ptr<\_Tp[], \_Dp>::~~unique\_ptr().

### 5.1082.3.3 get\_deleter() [2/2]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
const deleter_type& std::unique_ptr<_Tp, _Dp>::get_deleter ( ) const [inline], [noexcept]
```

Return a reference to the stored deleter.

Definition at line 355 of file unique\_ptr.h.

#### 5.1082.3.4 operator bool()

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
std::unique_ptr<_Tp, _Dp>::operator bool ( ) const [inline], [explicit], [noexcept]
```

Return true if the stored pointer is not null.

Definition at line 359 of file unique\_ptr.h.

#### 5.1082.3.5 operator\*()

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
add_lvalue_reference<element_type>::type std::unique_ptr<_Tp, _Dp>::operator* ( ) const [inline]
```

Dereference the stored pointer.

Definition at line 329 of file unique\_ptr.h.

#### 5.1082.3.6 operator->()

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
pointer std::unique_ptr<_Tp, _Dp>::operator-> ( ) const [inline], [noexcept]
```

Return the stored pointer.

Definition at line 337 of file unique\_ptr.h.

#### 5.1082.3.7 operator=() [1/3]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
unique_ptr& std::unique_ptr<_Tp, _Dp>::operator= (
    unique_ptr<_Tp, _Dp> && __u ) [inline], [noexcept]
```

Move assignment operator.

##### Parameters

 <i>__u</i>	The object to transfer ownership from.
---	--

Invokes the deleter first if this object owns a pointer.

Definition at line 290 of file unique\_ptr.h.

## 5.1082.3.8 operator=() [2/3]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
template<typename _Up, typename _Ep >
enable_if< __and< __safe_conversion_up<_Up, _Ep>, is_assignable<deleter_type&, _Ep&&> >↵
::value, unique_ptr&>::type std::unique_ptr<_Tp, _Dp>::operator= (
    unique_ptr<_Up, _Ep> && __u ) [inline], [noexcept]
```

Assignment from another type.

## Parameters

<u>↵</u> <u>u</u>	The object to transfer ownership from, which owns a convertible pointer to a non-array object.
----------------------	--

Invokes the deleter first if this object owns a pointer.

Definition at line 310 of file unique\_ptr.h.

## 5.1082.3.9 operator=() [3/3]

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
unique_ptr& std::unique_ptr<_Tp, _Dp>::operator= (
    nullptr_t ) [inline], [noexcept]
```

Reset the unique\_ptr to empty, invoking the deleter if necessary.

Definition at line 319 of file unique\_ptr.h.

## 5.1082.3.10 release()

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
pointer std::unique_ptr<_Tp, _Dp>::release ( ) [inline], [noexcept]
```

Release ownership of any stored pointer.

Definition at line 366 of file unique\_ptr.h.

## 5.1082.3.11 reset()

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
void std::unique_ptr<_Tp, _Dp>::reset (
    pointer __p = pointer() ) [inline], [noexcept]
```

Replace the stored pointer.

## Parameters

<code>_p</code>	The new pointer to store.
-----------------	---------------------------

The deleter will be invoked if a pointer is already owned.

Definition at line 380 of file `unique_ptr.h`.

Referenced by `std::unique_ptr<_Result<_Res>>::operator=()`, and `std::unique_ptr<_Tp[],_Dp>::operator=()`.

5.1082.3.12 `swap()`

```
template<typename _Tp, typename _Dp = default_delete<_Tp>>
void std::unique_ptr<_Tp, _Dp>::swap (
    unique_ptr<_Tp, _Dp> & __u ) [inline], [noexcept]
```

Exchange the pointer and deleter with another object.

Definition at line 390 of file `unique_ptr.h`.

Referenced by `std::unique_ptr<_Result<_Res>>::reset()`, and `std::unique_ptr<_Tp[],_Dp>::reset()`.

The documentation for this class was generated from the following files:

- [unique\\_ptr.h](#)
- [auto\\_ptr.h](#)

5.1083 `std::unique_ptr<_Tp[],_Dp>` Class Template Reference

## 5.1083.1 Detailed Description

```
template<typename _Tp, typename _Dp>
class std::unique_ptr< _Tp[], _Dp >
```

20.7.1.3 [unique\\_ptr](#) for array objects with a runtime length

Definition at line 406 of file [unique\\_ptr.h](#).

## 5.1083.2 Constructor &amp; Destructor Documentation

**5.1083.2.1** `unique_ptr()` [1/6]

```
template<typename _Tp , typename _Dp >
template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>>
constexpr std::unique_ptr< _Tp[], _Dp >::unique_ptr ( ) [inline], [noexcept]
```

Default constructor, creates a `unique_ptr` that owns nothing.

Definition at line 460 of file `unique_ptr.h`.

**5.1083.2.2** `unique_ptr()` [2/6]

```
template<typename _Tp , typename _Dp >
template<typename _Up , typename _Vp = _Dp, typename = _DeleterConstraint<_Vp>, typename = typename
enable_if< __safe_conversion_raw<_Up>::value, bool>::type>
std::unique_ptr< _Tp[], _Dp >::unique_ptr (
    _Up __p ) [inline], [explicit], [noexcept]
```

Takes ownership of a pointer.

**Parameters**

<code>__p</code>	A pointer to an array of a type safely convertible to an array of <code>element_type</code>
------------------	---

The deleter will be value-initialized.

Definition at line 477 of file `unique_ptr.h`.

**5.1083.2.3** `unique_ptr()` [3/6]

```
template<typename _Tp , typename _Dp >
template<typename _Up , typename = typename enable_if< __safe_conversion_raw<_Up>::value, bool>::type>
std::unique_ptr< _Tp[], _Dp >::unique_ptr (
    _Up __p,
    typename conditional< is_reference< deleter_type >::value, deleter_type, const deleter<
_type & >::type __d ) [inline], [noexcept]
```

Takes ownership of a pointer.

**Parameters**

<code>__p</code>	A pointer to an array of a type safely convertible to an array of <code>element_type</code>
<code>__d</code>	A reference to a deleter.

The deleter will be initialized with `__d`

Definition at line 492 of file `unique_ptr.h`.

#### 5.1083.2.4 unique\_ptr() [4/6]

```
template<typename _Tp , typename _Dp >
template<typename _Up , typename = typename enable_if< __safe_conversion_raw<_Up>::value, bool>::type>
std::unique_ptr< _Tp[], _Dp >::unique_ptr (
    _Up __p,
    typename remove_reference< deleter_type >::type && __d ) [inline], [noexcept]
```

Takes ownership of a pointer.

##### Parameters

<code>__p</code>	A pointer to an array of a type safely convertible to an array of <code>element_type</code>
<code>__d</code>	A reference to a deleter.

The deleter will be initialized with `std::move(__d)`

Definition at line 508 of file `unique_ptr.h`.

#### 5.1083.2.5 unique\_ptr() [5/6]

```
template<typename _Tp , typename _Dp >
std::unique_ptr< _Tp[], _Dp >::unique_ptr (
    unique_ptr< _Tp[], _Dp > && __u ) [inline], [noexcept]
```

Move constructor.

Definition at line 515 of file `unique_ptr.h`.

#### 5.1083.2.6 unique\_ptr() [6/6]

```
template<typename _Tp , typename _Dp >
template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>>
constexpr std::unique_ptr< _Tp[], _Dp >::unique_ptr (
    nullptr_t ) [inline], [noexcept]
```

Creates a `unique_ptr` that owns nothing.

Definition at line 521 of file `unique_ptr.h`.

### 5.1083.2.7 ~unique\_ptr()

```
template<typename _Tp , typename _Dp >
std::unique_ptr< _Tp[], _Dp >::~~unique_ptr ( ) [inline]
```

Destructor, invokes the deleter if the stored pointer is not null.

Definition at line 533 of file unique\_ptr.h.

References `std::unique_ptr< _Tp, _Dp >::get_deleter()`.

## 5.1083.3 Member Function Documentation

### 5.1083.3.1 get()

```
template<typename _Tp , typename _Dp >
pointer std::unique_ptr< _Tp[], _Dp >::get (
    void ) const [inline], [noexcept]
```

Return the stored pointer.

Definition at line 597 of file unique\_ptr.h.

### 5.1083.3.2 get\_deleter() [1/2]

```
template<typename _Tp , typename _Dp >
deleter_type& std::unique_ptr< _Tp[], _Dp >::get_deleter ( ) [inline], [noexcept]
```

Return a reference to the stored deleter.

Definition at line 602 of file unique\_ptr.h.

### 5.1083.3.3 get\_deleter() [2/2]

```
template<typename _Tp , typename _Dp >
const deleter_type& std::unique_ptr< _Tp[], _Dp >::get_deleter ( ) const [inline], [noexcept]
```

Return a reference to the stored deleter.

Definition at line 607 of file unique\_ptr.h.

#### 5.1083.3.4 operator bool()

```
template<typename _Tp , typename _Dp >
std::unique_ptr< _Tp[], _Dp >::operator bool ( ) const [inline], [explicit], [noexcept]
```

Return `true` if the stored pointer is not null.

Definition at line 611 of file `unique_ptr.h`.

References `std::unique_ptr< _Tp, _Dp >::get()`.

#### 5.1083.3.5 operator=() [1/3]

```
template<typename _Tp , typename _Dp >
unique_ptr& std::unique_ptr< _Tp[], _Dp >::operator= (
    unique_ptr< _Tp[], _Dp > && __u ) [inline], [noexcept]
```

Move assignment operator.

##### Parameters

<code>__u</code>	The object to transfer ownership from.
------------------	--

Invokes the deleter first if this object owns a pointer.

Definition at line 550 of file `unique_ptr.h`.

References `std::unique_ptr< _Tp, _Dp >::get_deleter()`, and `std::unique_ptr< _Tp, _Dp >::reset()`.

#### 5.1083.3.6 operator=() [2/3]

```
template<typename _Tp , typename _Dp >
template<typename _Up , typename _Ep >
enable_if<__and<__safe_conversion_up<_Up, _Ep>, is_assignable<deleter_type&, _Ep&&> >::value,
unique_ptr&>::type std::unique_ptr< _Tp[], _Dp >::operator= (
    unique_ptr< _Up, _Ep > && __u ) [inline], [noexcept]
```

Assignment from another type.

##### Parameters

<code>__u</code>	The object to transfer ownership from, which owns a convertible pointer to an array object.
------------------	---

Invokes the deleter first if this object owns a pointer.

Definition at line 570 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp>::get_deleter()`, and `std::unique_ptr<_Tp, _Dp>::reset()`.

#### 5.1083.3.7 `operator=()` [3/3]

```
template<typename _Tp , typename _Dp >
unique_ptr& std::unique_ptr<_Tp[], _Dp>::operator= (
    nullptr_t ) [inline], [noexcept]
```

Reset the `unique_ptr` to empty, invoking the deleter if necessary.

Definition at line 579 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp>::reset()`.

#### 5.1083.3.8 `operator[]()`

```
template<typename _Tp , typename _Dp >
std::add_lvalue_reference<element_type>::type std::unique_ptr<_Tp[], _Dp>::operator[] (
    size_t __i ) const [inline]
```

Access an element of owned array.

Definition at line 589 of file `unique_ptr.h`.

#### 5.1083.3.9 `release()`

```
template<typename _Tp , typename _Dp >
pointer std::unique_ptr<_Tp[], _Dp>::release ( ) [inline], [noexcept]
```

Release ownership of any stored pointer.

Definition at line 618 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp>::get()`.

#### 5.1083.3.10 `reset()`

```
template<typename _Tp , typename _Dp >
template<typename _Up , typename = _Require<__or_<is_same<_Up, pointer>, __and_<is_same<pointer,
element_type*>, is_pointer<_Up>, is_convertible<typename remove_pointer<_Up>::type(*)[], element←
_type(*)[]>>>>>
void std::unique_ptr<_Tp[], _Dp>::reset (
    _Up __p ) [inline], [noexcept]
```

Replace the stored pointer.

## Parameters

<a href="#"><code>_p</code></a>	The new pointer to store.
---------------------------------	---------------------------

The deleter will be invoked if a pointer is already owned.

Definition at line 644 of file `unique_ptr.h`.

References `std::unique_ptr< _Tp, _Dp >::get_deleter()`, and `std::unique_ptr< _Tp, _Dp >::swap()`.

## 5.1083.3.11 swap()

```
template<typename _Tp , typename _Dp >
void std::unique_ptr< _Tp[], _Dp >::swap (
    unique_ptr< _Tp[], _Dp > & __u ) [inline], [noexcept]
```

Exchange the pointer and deleter with another object.

Definition at line 660 of file `unique_ptr.h`.

#### 5.1084.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc =  
allocator<std::pair<const _Key, _Tp>>>>  
class std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >
```

A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys.

## Template Parameters

<code>_Key</code>	Type of key objects.
<code>_Tp</code>	Type of mapped objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>std::allocator&lt;std::pair&lt;const _Key, _Tp&gt;&gt;</code> .

Meets the requirements of a [container](#), and [unordered associative container](#)

The resulting value type of the container is `std::pair<const _Key, _Tp>`.

Base is `_Hashtable`, dispatched at compile time via template alias `__umap_hashtable`.

Definition at line 102 of file `unordered_map.h`.

## 5.1084.2 Member Typedef Documentation

## 5.1084.2.1 allocator\_type

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::allocator_type std::unordered\_map< \_Key, \_Tp, \_Hash, \_Pred, \_Alloc >::allocator\_type
```

Public typedefs.

Definition at line 116 of file `unordered_map.h`.

## 5.1084.2.2 const\_iterator

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::const_iterator std::unordered\_map< \_Key, \_Tp, \_Hash, \_Pred, \_Alloc >::const\_iterator
```

Iterator-related typedefs.

Definition at line 126 of file `unordered_map.h`.

### 5.1084.2.3 const\_local\_iterator

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::const_local_iterator std::unordered\_map< _Key, _Tp, _Hash, _Pred, _Alloc >::const_local_iterator
```

Iterator-related typedefs.

Definition at line 128 of file unordered\_map.h.

### 5.1084.2.4 const\_pointer

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::const_pointer std::unordered\_map< _Key, _Tp, _Hash, _Pred, _Alloc >::const_pointer
```

Iterator-related typedefs.

Definition at line 122 of file unordered\_map.h.

### 5.1084.2.5 const\_reference

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::const_reference std::unordered\_map< _Key, _Tp, _Hash, _Pred, _Alloc >::const_reference
```

Iterator-related typedefs.

Definition at line 124 of file unordered\_map.h.

### 5.1084.2.6 difference\_type

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::difference_type std::unordered\_map< _Key, _Tp, _Hash, _Pred, _Alloc >::difference_type
```

Iterator-related typedefs.

Definition at line 130 of file unordered\_map.h.

#### 5.1084.2.7 hasher

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
typedef _Hashtable::hasher std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::hasher
```

Public typedefs.

Definition at line 114 of file unordered\_map.h.

#### 5.1084.2.8 iterator

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
typedef _Hashtable::iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::iterator
```

Iterator-related typedefs.

Definition at line 125 of file unordered\_map.h.

#### 5.1084.2.9 key\_equal

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
typedef _Hashtable::key_equal std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::key_equal
```

Public typedefs.

Definition at line 115 of file unordered\_map.h.

#### 5.1084.2.10 key\_type

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
typedef _Hashtable::key_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::key_type
```

Public typedefs.

Definition at line 111 of file unordered\_map.h.

#### 5.1084.2.11 local\_iterator

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::local_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::local_iterator
```

Iterator-related typedefs.

Definition at line 127 of file unordered\_map.h.

#### 5.1084.2.12 mapped\_type

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::mapped_type std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::mapped_type
```

Public typedefs.

Definition at line 113 of file unordered\_map.h.

#### 5.1084.2.13 pointer

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::pointer std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::pointer
```

Iterator-related typedefs.

Definition at line 121 of file unordered\_map.h.

#### 5.1084.2.14 reference

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::reference std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::reference
```

Iterator-related typedefs.

Definition at line 123 of file unordered\_map.h.

## 5.1084.2.15 size\_type

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
typedef _Hashtable::size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::size_type
```

Iterator-related typedefs.

Definition at line 129 of file unordered\_map.h.

## 5.1084.2.16 value\_type

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
typedef _Hashtable::value_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::value_type
```

Public typedefs.

Definition at line 112 of file unordered\_map.h.

## 5.1084.3 Constructor &amp; Destructor Documentation

## 5.1084.3.1 unordered\_map() [1/7]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map ( ) [default]
```

Default constructor.

## 5.1084.3.2 unordered\_map() [2/7]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (
    size_type __n,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline], [explicit]
```

Default constructor creates no elements.

## Parameters

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 151 of file `unordered_map.h`.

5.1084.3.3 `unordered_map()` [3/7]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename _InputIterator >
std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (
    _InputIterator __first,
    _InputIterator __last,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eqf = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an `unordered_map` from a range.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_map` consisting of copies of the elements from `[__first,__last)`. This is linear in N (where N is `distance(__first,__last)`).

Definition at line 172 of file `unordered_map.h`.

5.1084.3.4 `unordered_map()` [4/7]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (
    const unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > & ) [default]
```

Copy constructor.

## 5.1084.3.5 unordered\_map() [5/7]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (
    unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > && ) [default]
```

Move constructor.

## 5.1084.3.6 unordered\_map() [6/7]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (
    const allocator_type & __a ) [inline], [explicit]
```

Creates an unordered\_map with no elements.

## Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 191 of file unordered\_map.h.

## 5.1084.3.7 unordered\_map() [7/7]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map (
    initializer_list< value_type > __l,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an unordered\_map from an initializer\_list.

## Parameters

<code>__l</code>	An initializer_list.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq1</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_map` consisting of copies of the elements in the list. This is linear in  $N$  (where  $N$  is `__l.size()`).

Definition at line 226 of file `unordered_map.h`.

#### 5.1084.4 Member Function Documentation

##### 5.1084.4.1 `at()` [1/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
mapped_type& std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::at (
    const key_type & __k ) [inline]
```

Access to `unordered_map` data.

##### Parameters

<code>__k</code>	The key for which data should be retrieved.
------------------	---

##### Returns

A reference to the data whose key is equal to `__k`, if such a data is present in the `unordered_map`.

##### Exceptions

<code>std::out_of_range</code>	If no such data is present.
--------------------------------	-----------------------------

Definition at line 990 of file `unordered_map.h`.

##### 5.1084.4.2 `at()` [2/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
const mapped_type& std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::at (
    const key_type & __k ) const [inline]
```

Access to `unordered_map` data.

##### Parameters

<code>__k</code>	The key for which data should be retrieved.
------------------	---

**Returns**

A reference to the data whose key is equal to `__k`, if such a data is present in the `unordered_map`.

**Exceptions**

<code>std::out_of_range</code>	If no such data is present.
--------------------------------	-----------------------------

Definition at line 994 of file `unordered_map.h`.

**5.1084.4.3 begin()** [1/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]
```

Returns a read/write iterator that points to the first element in the `unordered_map`.

Definition at line 324 of file `unordered_map.h`.

**5.1084.4.4 begin()** [2/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the `unordered_map`.

Definition at line 333 of file `unordered_map.h`.

**5.1084.4.5 begin()** [3/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (
    size_type __n ) [inline]
```

Returns a read/write iterator pointing to the first bucket element.

**Parameters**

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read/write local iterator.

Definition at line 1035 of file unordered\_map.h.

**5.1084.4.6 begin()** [4/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

**Parameters**

<code>_↵</code>	The bucket index.
<code>_n</code>	

**Returns**

A read-only local iterator.

Definition at line 1046 of file unordered\_map.h.

**5.1084.4.7 bucket\_count()**

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::bucket_count ( ) const [inline],
[noexcept]
```

Returns the number of buckets of the unordered\_map.

Definition at line 1002 of file unordered\_map.h.

**5.1084.4.8 cbegin()** [1/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_map.

Definition at line 337 of file unordered\_map.h.

## 5.1084.4.9 cbegin() [2/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>_↵</code>	The bucket index.
<code>_n</code>	

## Returns

A read-only local iterator.

Definition at line 1050 of file unordered\_map.h.

## 5.1084.4.10 cend() [1/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cend ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the unordered\_map.

Definition at line 359 of file unordered\_map.h.

## 5.1084.4.11 cend() [2/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::cend (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

## Parameters

<code>_↵</code>	The bucket index.
<code>_n</code>	

**Returns**

A read-only local iterator.

Definition at line 1076 of file unordered\_map.h.

**5.1084.4.12 clear()**

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
void std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]
```

Erases all elements in an unordered\_map. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 842 of file unordered\_map.h.

**5.1084.4.13 count()**

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
size_type std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::count (
    const key_type & __x ) const [inline]
```

Finds the number of elements.

**Parameters**

<code>__x</code>	Key to count.
------------------	---------------

**Returns**

Number of elements with specified key.

This function only makes sense for unordered\_multimap; for unordered\_map the result will either be 0 (not present) or 1 (present).

Definition at line 938 of file unordered\_map.h.

5.1084.4.14 `emplace()`

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename... _Args>
std::pair<iterator, bool> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace (
    _Args &&... __args ) [inline]
```

Attempts to build and insert a `std::pair` into the `unordered_map`.

## Parameters

<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).
---------------------	--

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to build and insert a (key, value) pair into the `unordered_map`. An `unordered_map` relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the `unordered_map`.

Insertion requires amortized constant time.

Definition at line 387 of file `unordered_map.h`.

5.1084.4.15 `emplace_hint()`

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename... _Args>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace_hint (
    const_iterator __pos,
    _Args &&... __args ) [inline]
```

Attempts to build and insert a `std::pair` into the `unordered_map`.

## Parameters

<code>__pos</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).

## Returns

An iterator that points to the element with key of the `std::pair` built from `__args` (may or may not be that `std::pair`).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `emplace()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 418 of file `unordered_map.h`.

#### 5.1084.4.16 `empty()`

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
bool std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::empty ( ) const [inline], [noexcept]
```

Returns true if the `unordered_map` is empty.

Definition at line 304 of file `unordered_map.h`.

#### 5.1084.4.17 `end()` [1/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::end ( ) [inline], [noexcept]
```

Returns a read/write iterator that points one past the last element in the `unordered_map`.

Definition at line 346 of file `unordered_map.h`.

#### 5.1084.4.18 `end()` [2/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::end ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_map`.

Definition at line 355 of file `unordered_map.h`.

#### 5.1084.4.19 `end()` [3/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
local_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::end (
    size_type __n ) [inline]
```

Returns a read/write iterator pointing to one past the last bucket elements.

## Parameters

<code>_↵</code>	The bucket index.
<code>_n</code>	

## Returns

A read/write local iterator.

Definition at line 1061 of file unordered\_map.h.

## 5.1084.4.20 end() [4/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_local_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::end (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

## Parameters

<code>_↵</code>	The bucket index.
<code>_n</code>	

## Returns

A read-only local iterator.

Definition at line 1072 of file unordered\_map.h.

## 5.1084.4.21 equal\_range() [1/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::pair<iterator, iterator> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::equal_range
(
    const key_type & __x ) [inline]
```

Finds a subsequence matching given key.

**Parameters**

<code>_↵</code>	Key to be located.
<code>_X</code>	

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for `unordered_multimap`.

Definition at line 951 of file `unordered_map.h`.

**5.1084.4.22 `equal_range()`** [2/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
std::pair<const_iterator, const_iterator> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc
>::equal_range (
    const key_type & __x ) const [inline]
```

Finds a subsequence matching given key.

**Parameters**

<code>_↵</code>	Key to be located.
<code>_X</code>	

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for `unordered_multimap`.

Definition at line 955 of file `unordered_map.h`.

**5.1084.4.23 `erase()`** [1/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (
    const_iterator __position ) [inline]
```

Erases an element from an `unordered_map`.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_map`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 792 of file `unordered_map.h`.

5.1084.4.24 `erase()` [2/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (
    iterator __position ) [inline]
```

Erases an element from an `unordered_map`.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_map`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 797 of file `unordered_map.h`.

5.1084.4.25 `erase()` [3/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (
    const key_type & __x ) [inline]
```

Erases elements according to the provided key.

**Parameters**

<code>_↵</code>	Key of element to be erased.
<code>_X</code>	

**Returns**

The number of elements erased.

This function erases all the elements located by the given key from an `unordered_map`. For an `unordered_map` the result of this function can only be 0 (not present) or 1 (present). Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 814 of file `unordered_map.h`.

**5.1084.4.26 erase()** [4/4]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (
    const_iterator __first,
    const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an `unordered_map`.

**Parameters**

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

**Returns**

The iterator `__last`.

This function erases a sequence of elements from an `unordered_map`. Note that this function only erases the elements, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 832 of file `unordered_map.h`.

**5.1084.4.27** find() [1/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) [inline]
```

Tries to locate an element in an unordered\_map.

**Parameters**

<code>_↵</code>	Key to be located.
<code>_X</code>	

**Returns**

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 920 of file `unordered_map.h`.

**5.1084.4.28 find()** [2/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) const [inline]
```

Tries to locate an element in an `unordered_map`.

**Parameters**

<code>_↵</code>	Key to be located.
<code>_X</code>	

**Returns**

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 924 of file `unordered_map.h`.

**5.1084.4.29 get\_allocator()**

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
allocator_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::get_allocator ( ) const
[inline], [noexcept]
```

Returns the allocator object used by the `unordered_map`.

Definition at line 297 of file `unordered_map.h`.

## 5.1084.4.30 hash\_function()

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
hasher std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]
```

Returns the hash functor object with which the unordered\_map was constructed.

Definition at line 896 of file unordered\_map.h.

## 5.1084.4.31 insert() [1/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::pair<iterator, bool> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    const value_type & __x ) [inline]
```

Attempts to insert a std::pair into the unordered\_map.

## Parameters

<code>__x</code>	Pair to be inserted (see std::make_pair for easy creation of pairs).
------------------	--

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the unordered\_map. An unordered\_map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the unordered\_map.

Insertion requires amortized constant time.

Definition at line 579 of file unordered\_map.h.

## 5.1084.4.32 insert() [2/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::pair<iterator, bool> std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    value_type && __x ) [inline]
```

Attempts to insert a std::pair into the unordered\_map.

**Parameters**

<code>_↵</code> <code>_X</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).
------------------------------------	---

**Returns**

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the `unordered_map`. An `unordered_map` relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the `unordered_map`.

Insertion requires amortized constant time.

Definition at line 585 of file `unordered_map.h`.

**5.1084.4.33 insert()** [3/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename _Pair >
__enable_if_t<is_constructible<value_type, _Pair&&>::value, pair<iterator, bool> > std::unordered_map<
_Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    _Pair && __x ) [inline]
```

Attempts to insert a `std::pair` into the `unordered_map`.

**Parameters**

<code>_↵</code> <code>_X</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).
------------------------------------	---

**Returns**

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the `unordered_map`. An `unordered_map` relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the `unordered_map`.

Insertion requires amortized constant time.

Definition at line 591 of file `unordered_map.h`.

## 5.1084.4.34 insert() [4/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    const value_type & __x ) [inline]
```

Attempts to insert a std::pair into the unordered\_map.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see std::make_pair for easy creation of pairs).

## Returns

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 618 of file unordered\_map.h.

## 5.1084.4.35 insert() [5/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    value_type && __x ) [inline]
```

Attempts to insert a std::pair into the unordered\_map.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see std::make_pair for easy creation of pairs).

**Returns**

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 624 of file `unordered_map.h`.

**5.1084.4.36 insert()** [6/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename _Pair >
__enable_if_t<is_constructible<value_type, _Pair&&>::value, iterator> std::unordered_map< _Key,
_Tp, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    _Pair && __x ) [inline]
```

Attempts to insert a `std::pair` into the `unordered_map`.

**Parameters**

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).

**Returns**

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 629 of file `unordered_map.h`.

**5.1084.4.37 insert()** [7/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename _InputIterator >
void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

A template function that attempts to insert a range of elements.

**Parameters**

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 644 of file unordered\_map.h.

**5.1084.4.38 insert()** [8/8]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    initializer_list< value_type > __l ) [inline]
```

Attempts to insert a list of elements into the unordered\_map.

**Parameters**

<code>↵</code> <code>↵</code> <code>↵</code> <code>↵</code> <code>/</code>	A std::initializer_list<value_type> of elements to be inserted.
--	---

Complexity similar to that of the range constructor.

Definition at line 655 of file unordered\_map.h.

**5.1084.4.39 key\_eq()**

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
key_equal std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]
```

Returns the key comparison object with which the `unordered_map` was constructed.

Definition at line 902 of file `unordered_map.h`.

#### 5.1084.4.40 `load_factor()`

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
float std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline],
[noexcept]
```

Returns the average number of elements per bucket.

Definition at line 1084 of file `unordered_map.h`.

#### 5.1084.4.41 `max_bucket_count()`

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const [inline],
[noexcept]
```

Returns the maximum number of buckets of the `unordered_map`.

Definition at line 1007 of file `unordered_map.h`.

#### 5.1084.4.42 `max_load_factor()` [1/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
float std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline],
[noexcept]
```

Returns a positive number that the `unordered_map` tries to keep the load factor less than or equal to.

Definition at line 1090 of file `unordered_map.h`.

#### 5.1084.4.43 `max_load_factor()` [2/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor (
    float __z ) [inline]
```

Change the `unordered_map` maximum load factor.

## Parameters

<code>_Z</code>	The new maximum load factor.
-----------------	------------------------------

Definition at line 1098 of file unordered\_map.h.

## 5.1084.4.44 max\_size()

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::max_size ( ) const [inline],
[noexcept]
```

Returns the maximum size of the unordered\_map.

Definition at line 314 of file unordered\_map.h.

## 5.1084.4.45 operator=() [1/3]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
unordered_map& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (
    const unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > & ) [default]
```

Copy assignment operator.

## 5.1084.4.46 operator=() [2/3]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
unordered_map& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (
    unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > && ) [default]
```

Move assignment operator.

## 5.1084.4.47 operator=() [3/3]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
unordered_map& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (
    initializer_list< value_type > & __l ) [inline]
```

Unordered\_map list assignment operator.

## Parameters

$\leftarrow$	An initializer_list.
$\_ \leftarrow$	
$\leftarrow$	
$\_ \leftarrow$	
$/$	

This function fills an unordered\_map with copies of the elements in the initializer list  $\_ /$ .

Note that the assignment completely changes the unordered\_map and that the resulting unordered\_map's size is the same as the number of elements assigned.

Definition at line 289 of file unordered\_map.h.

## 5.1084.4.48 operator[]() [1/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
mapped_type& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator[] (
    const key_type & __k ) [inline]
```

Subscript (  $[]$  ) access to unordered\_map data.

## Parameters

$\_ \leftarrow$ $\_ k$	The key for which data should be retrieved.
---------------------------	---

## Returns

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript (  $[]$  ) operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires constant time.

Definition at line 973 of file unordered\_map.h.

## 5.1084.4.49 operator[]() [2/2]

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
mapped_type& std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator[] (
    key_type && __k ) [inline]
```

Subscript (  $[]$  ) access to unordered\_map data.

## Parameters

<code>↵ _k</code>	The key for which data should be retrieved.
-----------------------	---

## Returns

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript ( [] )operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires constant time.

Definition at line 977 of file unordered\_map.h.

## 5.1084.4.50 rehash()

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::rehash (
    size_type __n ) [inline]
```

May rehash the unordered\_map.

## Parameters

<code>↵ _n</code>	The new number of buckets.
-----------------------	----------------------------

Rehash will occur only if the new number of buckets respect the unordered\_map maximum load factor.

Definition at line 1109 of file unordered\_map.h.

## 5.1084.4.51 reserve()

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::reserve (
    size_type __n ) [inline]
```

Prepare the unordered\_map for a specified number of elements.

**Parameters**

<code>_↵</code> <code>_n</code>	Number of elements required.
------------------------------------	------------------------------

Same as `rehash(ceil(n / max_load_factor()))`.

Definition at line 1120 of file `unordered_map.h`.

**5.1084.4.52 `size()`**

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
size_type std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::size ( ) const    [inline], [noexcept]
```

Returns the size of the `unordered_map`.

Definition at line 309 of file `unordered_map.h`.

**5.1084.4.53 `swap()`**

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_↵
_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
void std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::swap (
    unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > & __x )    [inline], [noexcept]
```

Swaps data with another `unordered_map`.

**Parameters**

<code>_↵</code> <code>_X</code>	An <code>unordered_map</code> of the same element and allocator types.
------------------------------------	--

This exchanges the elements between two `unordered_map` in constant time. Note that the global `std::swap()` function is specialized such that `std::swap(m1,m2)` will feed to this function.

Definition at line 856 of file `unordered_map.h`.

The documentation for this class was generated from the following file:

#### 5.1085.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc =
allocator<std::pair<const _Key, _Tp>>>>
class std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc>
```

A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.

### Template Parameters

<code>_Key</code>	Type of key objects.
<code>_Tp</code>	Type of mapped objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>std::allocator&lt;std::pair&lt;const _Key, _Tp&gt;&gt;</code> .

Meets the requirements of a `container`, and `unordered associative container`

The resulting value type of the container is `std::pair<const _Key, _Tp>`.

Base is `_Hashtable`, dispatched at compile time via template alias `__ummap_hashtable`.

Definition at line 73 of file `unordered_map.h`.

## 5.1085.2 Member Typedef Documentation

### 5.1085.2.1 `allocator_type`

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::allocator_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >↵
::allocator_type
```

Public typedefs.

Definition at line 1247 of file `unordered_map.h`.

### 5.1085.2.2 `const_iterator`

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
typedef _Hashtable::const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >↵
::const_iterator
```

Iterator-related typedefs.

Definition at line 1257 of file `unordered_map.h`.

### 5.1085.2.3 const\_local\_iterator

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::const_local_iterator std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc  
>::const_local_iterator
```

Iterator-related typedefs.

Definition at line 1259 of file unordered\_map.h.

### 5.1085.2.4 const\_pointer

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::const_pointer std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >↵  
::const_pointer
```

Iterator-related typedefs.

Definition at line 1253 of file unordered\_map.h.

### 5.1085.2.5 const\_reference

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::const_reference std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >↵  
::const_reference
```

Iterator-related typedefs.

Definition at line 1255 of file unordered\_map.h.

### 5.1085.2.6 difference\_type

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::difference_type std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >↵  
::difference_type
```

Iterator-related typedefs.

Definition at line 1261 of file unordered\_map.h.

#### 5.1085.2.7 hasher

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::hasher std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::hasher
```

Public typedefs.

Definition at line 1245 of file unordered\_map.h.

#### 5.1085.2.8 iterator

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::iterator
```

Iterator-related typedefs.

Definition at line 1256 of file unordered\_map.h.

#### 5.1085.2.9 key\_equal

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::key_equal std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::key_equal
```

Public typedefs.

Definition at line 1246 of file unordered\_map.h.

#### 5.1085.2.10 key\_type

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::key_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::key_type
```

Public typedefs.

Definition at line 1242 of file unordered\_map.h.

### 5.1085.2.11 local\_iterator

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >↵  
::local_iterator
```

Iterator-related typedefs.

Definition at line 1258 of file unordered\_map.h.

### 5.1085.2.12 mapped\_type

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::mapped_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >↵  
::mapped_type
```

Public typedefs.

Definition at line 1244 of file unordered\_map.h.

### 5.1085.2.13 pointer

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::pointer std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::pointer
```

Iterator-related typedefs.

Definition at line 1252 of file unordered\_map.h.

### 5.1085.2.14 reference

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::reference std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::reference
```

Iterator-related typedefs.

Definition at line 1254 of file unordered\_map.h.

### 5.1085.2.15 size\_type

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::size_type
```

Iterator-related typedefs.

Definition at line 1260 of file unordered\_map.h.

### 5.1085.2.16 value\_type

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
typedef _Hashtable::value_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::value_type
```

Public typedefs.

Definition at line 1243 of file unordered\_map.h.

## 5.1085.3 Constructor & Destructor Documentation

### 5.1085.3.1 unordered\_multimap() [1/7]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap ( ) [default]
```

Default constructor.

### 5.1085.3.2 unordered\_multimap() [2/7]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (   
    size_type __n,  
    const hasher & __hf = hasher(),  
    const key_equal & __eq1 = key_equal(),  
    const allocator_type & __a = allocator_type() ) [inline], [explicit]
```

Default constructor creates no elements.

## Parameters

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 1281 of file `unordered_map.h`.

## 5.1085.3.3 unordered\_multimap() [3/7]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename _InputIterator >
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (
    _InputIterator __first,
    _InputIterator __last,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eqf = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an `unordered_multimap` from a range.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_multimap` consisting of copies of the elements from `[__first,__last)`. This is linear in N (where N is `distance(__first,__last)`).

Definition at line 1302 of file `unordered_map.h`.

## 5.1085.3.4 unordered\_multimap() [4/7]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (
    const unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > & ) [default]
```

Copy constructor.

**5.1085.3.5 unordered\_multimap()** [5/7]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (
    unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > && ) [default]
```

Move constructor.

**5.1085.3.6 unordered\_multimap()** [6/7]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (
    const allocator_type & __a ) [inline], [explicit]
```

Creates an unordered\_multimap with no elements.

**Parameters**

<code>↵</code>	An allocator object.
<code>_a</code>	

Definition at line 1321 of file unordered\_map.h.

**5.1085.3.7 unordered\_multimap()** [7/7]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap (
    initializer_list< value_type > __l,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an unordered\_multimap from an initializer\_list.

**Parameters**

<code>__l</code>	An initializer_list.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq1</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an unordered\_multimap consisting of copies of the elements in the list. This is linear in N (where N is `__l.size()`).

Definition at line 1356 of file unordered\_map.h.

#### 5.1085.4 Member Function Documentation

##### 5.1085.4.1 begin() [1/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]
```

Returns a read/write iterator that points to the first element in the unordered\_multimap.

Definition at line 1454 of file unordered\_map.h.

##### 5.1085.4.2 begin() [2/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_multimap.

Definition at line 1463 of file unordered\_map.h.

##### 5.1085.4.3 begin() [3/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (
    size_type __n ) [inline]
```

Returns a read/write iterator pointing to the first bucket element.

#### Parameters

<code>__↔ __n</code>	The bucket index.
--------------------------	-------------------

**Returns**

A read/write local iterator.

Definition at line 1868 of file unordered\_map.h.

**5.1085.4.4 begin()** [4/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin (   
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

**Parameters**

<code>_↵ __n</code>	The bucket index.
-------------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1879 of file unordered\_map.h.

**5.1085.4.5 bucket\_count()**

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::bucket_count ( ) const  
[inline], [noexcept]
```

Returns the number of buckets of the unordered\_multimap.

Definition at line 1835 of file unordered\_map.h.

**5.1085.4.6 cbegin()** [1/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline],  
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_multimap.

Definition at line 1467 of file unordered\_map.h.

**5.1085.4.7 cbegin()** [2/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cbegin (   
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

**Parameters**

<code>_↵</code>	The bucket index.
<code>_n</code>	

**Returns**

A read-only local iterator.

Definition at line 1883 of file unordered\_map.h.

**5.1085.4.8 cend()** [1/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cend ( ) const [inline],  
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the unordered\_multimap.

Definition at line 1489 of file unordered\_map.h.

**5.1085.4.9 cend()** [2/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::cend (   
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

<code>_↵</code>	The bucket index.
<code>_n</code>	

**Returns**

A read-only local iterator.

Definition at line 1909 of file unordered\_map.h.

**5.1085.4.10 clear()**

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]
```

Erases all elements in an unordered\_multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1718 of file unordered\_map.h.

**5.1085.4.11 count()**

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::count (
    const key_type & __x ) const [inline]
```

Finds the number of elements.

**Parameters**

<code>_↔</code>	Key to count.
<code>_X</code>	

**Returns**

Number of elements with specified key.

Definition at line 1812 of file unordered\_map.h.

**5.1085.4.12 emplace()**

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename... _Args>
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace (
    _Args &&... __args ) [inline]
```

Attempts to build and insert a std::pair into the unordered\_multimap.

## Parameters

<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).
---------------------	--

## Returns

An iterator that points to the inserted pair.

This function attempts to build and insert a (key, value) pair into the `unordered_multimap`.

Insertion requires amortized constant time.

Definition at line 1512 of file `unordered_map.h`.

5.1085.4.13 `emplace_hint()`

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
template<typename... _Args>
iterator std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::emplace_hint (
    const_iterator __pos,
    _Args &&... __args ) [inline]
```

Attempts to build and insert a `std::pair` into the `unordered_multimap`.

## Parameters

<code>__pos</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).

## Returns

An iterator that points to the element with key of the `std::pair` built from `__args`.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.↵associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.↵associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1539 of file `unordered_map.h`.

**5.1085.4.14** `empty()`

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
bool std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]
```

Returns true if the `unordered_multimap` is empty.

Definition at line 1434 of file `unordered_map.h`.

**5.1085.4.15** `end()` [1/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]
```

Returns a read/write iterator that points one past the last element in the `unordered_multimap`.

Definition at line 1476 of file `unordered_map.h`.

**5.1085.4.16** `end()` [2/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end ( ) const [inline],  
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_multimap`.

Definition at line 1485 of file `unordered_map.h`.

**5.1085.4.17** `end()` [3/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end (   
    size_type __n ) [inline]
```

Returns a read/write iterator pointing to one past the last bucket elements.

**Parameters**

<code>_↵</code>	The bucket index.
<code>_n</code>	

**Returns**

A read/write local iterator.

Definition at line 1894 of file unordered\_map.h.

**5.1085.4.18 end()** [4/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

<b>↵</b> <b>_n</b>	The bucket index.
-----------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1905 of file unordered\_map.h.

**5.1085.4.19 equal\_range()** [1/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
std::pair<iterator, iterator> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::equal_↵
_range (
    const key_type & __x ) [inline]
```

Finds a subsequence matching given key.

**Parameters**

<b>↵</b> <b>_x</b>	Key to be located.
-----------------------	--------------------

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1823 of file unordered\_map.h.

#### 5.1085.4.20 equal\_range() [2/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
std::pair<const_iterator, const_iterator> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _↵  
Alloc >::equal_range (   
    const key_type & __x ) const [inline]
```

Finds a subsequence matching given key.

##### Parameters

<code>_↵</code>	Key to be located.
<code>__x</code>	

##### Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1827 of file unordered\_map.h.

#### 5.1085.4.21 erase() [1/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (   
    const_iterator __position ) [inline]
```

Erases an element from an unordered\_multimap.

##### Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

##### Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an unordered\_multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1668 of file unordered\_map.h.

#### 5.1085.4.22 erase() [2/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (   
    iterator __position ) [inline]
```

Erases an element from an unordered\_multimap.

##### Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

##### Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an unordered\_multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1673 of file unordered\_map.h.

#### 5.1085.4.23 erase() [3/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (   
    const key_type & __x ) [inline]
```

Erases elements according to the provided key.

##### Parameters

<code>__x</code>	Key of elements to be erased.
------------------	-------------------------------

**Returns**

The number of elements erased.

This function erases all the elements located by the given key from an `unordered_multimap`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1689 of file `unordered_map.h`.

**5.1085.4.24** `erase()` [4/4]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::erase (
    const_iterator __first,
    const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an `unordered_multimap`.

**Parameters**

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

**Returns**

The iterator `__last`.

This function erases a sequence of elements from an `unordered_multimap`. Note that this function only erases the elements, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1708 of file `unordered_map.h`.

**5.1085.4.25** `find()` [1/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) [inline]
```

Tries to locate an element in an `unordered_multimap`.

## Parameters

<code>_↔</code>	Key to be located.
<code>_X</code>	

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 1798 of file `unordered_map.h`.

## 5.1085.4.26 find() [2/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) const [inline]
```

Tries to locate an element in an `unordered_multimap`.

## Parameters

<code>_↔</code>	Key to be located.
<code>_X</code>	

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 1802 of file `unordered_map.h`.

## 5.1085.4.27 get\_allocator()

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↔
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
allocator_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::get_allocator ( )
const [inline], [noexcept]
```

Returns the allocator object used by the `unordered_multimap`.

Definition at line 1427 of file `unordered_map.h`.

**5.1085.4.28** `hash_function()`

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
hasher std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]
```

Returns the hash functor object with which the `unordered_multimap` was constructed.

Definition at line 1774 of file `unordered_map.h`.

**5.1085.4.29** `insert()` [1/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (   
    const value_type & __x ) [inline]
```

Inserts a `std::pair` into the `unordered_multimap`.

**Parameters**

<code>↵ __x</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).
------------------------	---

**Returns**

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1553 of file `unordered_map.h`.

**5.1085.4.30** `insert()` [2/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>  
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (   
    value_type && __x ) [inline]
```

Inserts a `std::pair` into the `unordered_multimap`.

**Parameters**

<code>↵ __x</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).
------------------------	---

**Returns**

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1557 of file unordered\_map.h.

**5.1085.4.31 insert()** [3/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
template<typename _Pair >
__enable_if_t<is_constructible<value_type, _Pair&&>::value, iterator> std::unordered_multimap<
_Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    _Pair && __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

**Parameters**

<b>↵ __x</b>	Pair to be inserted (see std::make_pair for easy creation of pairs).
------------------	--

**Returns**

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1562 of file unordered\_map.h.

**5.1085.4.32 insert()** [4/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
iterator std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    const value_type & __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

**Parameters**

<b>__hint</b>	An iterator that serves as a hint as to where the pair should be inserted.
<b>__x</b>	Pair to be inserted (see std::make_pair for easy creation of pairs).

**Returns**

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1587 of file `unordered_map.h`.

**5.1085.4.33 insert()** [5/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    value_type && __x ) [inline]
```

Inserts a `std::pair` into the `unordered_multimap`.

**Parameters**

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).

**Returns**

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1593 of file `unordered_map.h`.

## 5.1085.4.34 insert() [6/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
template<typename _Pair >
__enable_if_t<is_constructible<value_type, _Pair&&>::value, iterator> std::unordered_multimap<
_Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    _Pair && __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see std::make_pair for easy creation of pairs).

## Returns

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.↵associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.↵associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1598 of file unordered\_map.h.

## 5.1085.4.35 insert() [7/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
template<typename _InputIterator >
void std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

A template function that attempts to insert a range of elements.

## Parameters

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 1613 of file unordered\_map.h.

#### 5.1085.4.36 insert() [8/8]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert (
    initializer_list< value_type > __l ) [inline]
```

Attempts to insert a list of elements into the unordered\_multimap.

##### Parameters

↵	A std::initializer_list<value_type> of elements to be inserted.
_↵	
↵	
_↵	
/	

Complexity similar to that of the range constructor.

Definition at line 1625 of file unordered\_map.h.

#### 5.1085.4.37 key\_eq()

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
key_equal std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]
```

Returns the key comparison object with which the unordered\_multimap was constructed.

Definition at line 1780 of file unordered\_map.h.

#### 5.1085.4.38 load\_factor()

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
float std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline],
[noexcept]
```

Returns the average number of elements per bucket.

Definition at line 1917 of file unordered\_map.h.

**5.1085.4.39 max\_bucket\_count()**

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
size_type std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const
[inline], [noexcept]
```

Returns the maximum number of buckets of the unordered\_multimap.

Definition at line 1840 of file unordered\_map.h.

**5.1085.4.40 max\_load\_factor()** [1/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
float std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline],
[noexcept]
```

Returns a positive number that the unordered\_multimap tries to keep the load factor less than or equal to.

Definition at line 1923 of file unordered\_map.h.

**5.1085.4.41 max\_load\_factor()** [2/2]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
void std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::max_load_factor (
    float __z ) [inline]
```

Change the unordered\_multimap maximum load factor.

**Parameters**

<b>_↵</b> <b>_z</b>	The new maximum load factor.
------------------------	------------------------------

Definition at line 1931 of file unordered\_map.h.

**5.1085.4.42 max\_size()**

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>>
size_type std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::max_size ( ) const [inline],
[noexcept]
```

Returns the maximum size of the unordered\_multimap.

Definition at line 1444 of file unordered\_map.h.

#### 5.1085.4.43 operator=() [1/3]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
unordered_multimap& std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (
    const unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > & ) [default]
```

Copy assignment operator.

#### 5.1085.4.44 operator=() [2/3]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
unordered_multimap& std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (
    unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > && ) [default]
```

Move assignment operator.

#### 5.1085.4.45 operator=() [3/3]

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
unordered_multimap& std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::operator= (
    initializer_list< value_type > __l ) [inline]
```

Unordered\_multimap list assignment operator.

#### Parameters

↵	An initializer_list.
_↵	
↵	
_↵	
/	

This function fills an unordered\_multimap with copies of the elements in the initializer list \_\_l.

Note that the assignment completely changes the unordered\_multimap and that the resulting unordered\_multimap's size is the same as the number of elements assigned.

Definition at line 1419 of file unordered\_map.h.

#### 5.1085.4.46 rehash()

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::rehash (   
    size_type __n ) [inline]
```

May rehash the unordered\_multimap.

##### Parameters

<code>↵ __n</code>	The new number of buckets.
------------------------	----------------------------

Rehash will occur only if the new number of buckets respect the unordered\_multimap maximum load factor.

Definition at line 1942 of file unordered\_map.h.

#### 5.1085.4.47 reserve()

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>  
void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::reserve (   
    size_type __n ) [inline]
```

Prepare the unordered\_multimap for a specified number of elements.

##### Parameters

<code>↵ __n</code>	Number of elements required.
------------------------	------------------------------

Same as rehash(ceil(n / max\_load\_factor())).

Definition at line 1953 of file unordered\_map.h.

#### 5.1085.4.48 size()

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵  
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
```

```
size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::size ( ) const [inline],
[noexcept]
```

Returns the size of the unordered\_multimap.

Definition at line 1439 of file unordered\_map.h.

#### 5.1085.4.49 swap()

```
template<typename _Key , typename _Tp , typename _Hash = hash<_Key>, typename _Pred = equal_↵
to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>>
void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::swap (
    unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > & __x ) [inline], [noexcept]
```

Swaps data with another unordered\_multimap.

##### Parameters

<a href="#">↵</a>	An unordered_multimap of the same element and allocator types.
<a href="#">_X</a>	

This exchanges the elements between two unordered\_multimap in constant time. Note that the global std::swap() function is specialized such that std::swap(m1,m2) will feed to this function.

Definition at line 1732 of file unordered\_map.h.

bool operator== (const unordered\_multiset< _Value1, _Hash1, _Pred1, _Alloc1 > &, const unordered\_multiset< _Value1, _Hash1, _Pred1, _Alloc1 > &)`

#### 5.1086.1 Detailed Description

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc =
allocator<_Value>>
class std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >
```

A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.

#### Template Parameters

<code>_Value</code>	Type of key objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_Key&gt;</code> .

Meets the requirements of a [container](#), and [unordered associative container](#)

Base is `_Hashtable`, dispatched at compile time via template alias `__umset_hashtable`.

Definition at line 70 of file `unordered_set.h`.

## 5.1086.2 Member Typedef Documentation

### 5.1086.2.1 `allocator_type`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::allocator_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >↵
::allocator_type
```

Public typedefs.

Definition at line 908 of file `unordered_set.h`.

### 5.1086.2.2 `const_iterator`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >↵
::const_iterator
```

Iterator-related typedefs.

Definition at line 918 of file `unordered_set.h`.

### 5.1086.2.3 `const_local_iterator`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc
>::const_local_iterator
```

Iterator-related typedefs.

Definition at line 920 of file `unordered_set.h`.

#### 5.1086.2.4 const\_pointer

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>

typedef _Hashtable::size_type std::unordered\_multiset< _Value, _Hash, _Pred, _Alloc >::size_type
```

Iterator-related typedefs.

Definition at line 921 of file unordered\_set.h.

#### 5.1086.2.15 value\_type

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::value_type std::unordered\_multiset< _Value, _Hash, _Pred, _Alloc >::value_type
```

Public typedefs.

Definition at line 905 of file unordered\_set.h.

### 5.1086.3 Constructor & Destructor Documentation

**5.1086.3.1 unordered\_multiset()** [1/7]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset ( ) [default]
```

Default constructor.

**5.1086.3.2 unordered\_multiset()** [2/7]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (
    size_type __n,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline], [explicit]
```

Default constructor creates no elements.

**Parameters**

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq1</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 942 of file unordered\_set.h.

**5.1086.3.3 unordered\_multiset()** [3/7]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename _InputIterator >
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (
    _InputIterator __first,
    _InputIterator __last,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an unordered\_multiset from a range.

**Parameters**

<code>__first</code>	An input iterator.
----------------------	--------------------

## Parameters

<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq1</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_multiset` consisting of copies of the elements from `[__first,__last)`. This is linear in `N` (where `N` is `distance(__first,__last)`).

Definition at line 963 of file `unordered_set.h`.

## 5.1086.3.4 unordered\_multiset() [4/7]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (
    const unordered_multiset< _Value, _Hash, _Pred, _Alloc > & ) [default]
```

Copy constructor.

## 5.1086.3.5 unordered\_multiset() [5/7]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (
    unordered_multiset< _Value, _Hash, _Pred, _Alloc > && ) [default]
```

Move constructor.

## 5.1086.3.6 unordered\_multiset() [6/7]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (
    initializer_list< value_type > __l,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an `unordered_multiset` from an `initializer_list`.

**Parameters**

<code>__l</code>	An initializer_list.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_multiset` consisting of copies of the elements in the list. This is linear in N (where N is `__l.size()`).

Definition at line 988 of file `unordered_set.h`.

**5.1086.3.7 unordered\_multiset()** [7/7]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset (
    const allocator_type & __a ) [inline], [explicit]
```

Creates an `unordered_multiset` with no elements.

**Parameters**

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 1009 of file `unordered_set.h`.

**5.1086.4 Member Function Documentation****5.1086.4.1 begin()** [1/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the `unordered_multiset`.

Definition at line 1116 of file `unordered_set.h`.

#### 5.1086.4.2 begin() [2/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_multiset.

Definition at line 1120 of file unordered\_set.h.

#### 5.1086.4.3 begin() [3/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin (
    size_type __n ) [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

##### Parameters

$\_n$	The bucket index.
-------	-------------------

##### Returns

A read-only local iterator.

Definition at line 1502 of file unordered\_set.h.

#### 5.1086.4.4 begin() [4/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

##### Parameters

$\_n$	The bucket index.
-------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1506 of file unordered\_set.h.

**5.1086.4.5 bucket\_count()**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::bucket_count ( ) const [inline],
[noexcept]
```

Returns the number of buckets of the unordered\_multiset.

Definition at line 1468 of file unordered\_set.h.

**5.1086.4.6 cbegin()** [1/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_multiset.

Definition at line 1143 of file unordered\_set.h.

**5.1086.4.7 cbegin()** [2/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cbegin (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

**Parameters**

	The bucket index.
<code>__n</code>	

**Returns**

A read-only local iterator.

Definition at line 1510 of file unordered\_set.h.

**5.1086.4.8 cend()** [1/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cend ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the unordered\_multiset.

Definition at line 1151 of file unordered\_set.h.

**5.1086.4.9 cend()** [2/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::cend (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

$\_n$	The bucket index.
-------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1530 of file unordered\_set.h.

**5.1086.4.10 clear()**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]
```

Erases all elements in an unordered\_multiset.

Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1352 of file `unordered_set.h`.

#### 5.1086.4.11 `count()`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::count (
    const key_type & __x ) const [inline]
```

Finds the number of elements.

##### Parameters

<code>__x</code>	Element to located.
------------------	---------------------

##### Returns

Number of elements with specified key.

Definition at line 1445 of file `unordered_set.h`.

#### 5.1086.4.12 `emplace()`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename... _Args>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::emplace (
    _Args &&... __args ) [inline]
```

Builds and insert an element into the `unordered_multiset`.

##### Parameters

<code>__args</code>	Arguments used to generate an element.
---------------------	--

##### Returns

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1165 of file unordered\_set.h.

#### 5.1086.4.13 `emplace_hint()`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename... _Args>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::emplace_hint (
    const_iterator __pos,
    _Args &&... __args ) [inline]
```

Inserts an element into the `unordered_multiset`.

##### Parameters

<code>__pos</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__args</code>	Arguments used to generate the element to be inserted.

##### Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.↵html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.↵html#containers.associative.insert_hints)

Insertion requires amortized constant time.

Definition at line 1187 of file unordered\_set.h.

#### 5.1086.4.14 `empty()`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
bool std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]
```

Returns true if the `unordered_multiset` is empty.

Definition at line 1095 of file unordered\_set.h.

**5.1086.4.15** `end()` [1/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_multiset`.

Definition at line 1130 of file `unordered_set.h`.

**5.1086.4.16** `end()` [2/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_multiset`.

Definition at line 1134 of file `unordered_set.h`.

**5.1086.4.17** `end()` [3/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end (
    size_type __n ) [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1522 of file `unordered_set.h`.

**5.1086.4.18** end() [4/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

<code>_↵</code>	The bucket index.
<code>_n</code>	

**Returns**

A read-only local iterator.

Definition at line 1526 of file unordered\_set.h.

**5.1086.4.19** equal\_range() [1/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::pair<iterator, iterator> std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::equal_↵
range (
    const key_type & __x ) [inline]
```

Finds a subsequence matching given key.

**Parameters**

<code>_↵</code>	Key to be located.
<code>_x</code>	

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1456 of file unordered\_set.h.

**5.1086.4.20** equal\_range() [2/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
```

```
std::pair<const_iterator, const_iterator> std::unordered_multiset< _Value, _Hash, _Pred, _Alloc
>::equal_range (
    const key_type & __x ) const    [inline]
```

Finds a subsequence matching given key.

#### Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

#### Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1460 of file unordered\_set.h.

#### 5.1086.4.21 erase() [1/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (
    const_iterator __position )    [inline]
```

Erases an element from an unordered\_multiset.

#### Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

#### Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an unordered\_multiset.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1298 of file unordered\_set.h.

## 5.1086.4.22 erase() [2/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (  
    iterator __position ) [inline]
```

Erases an element from an unordered\_multiset.

**Parameters**

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

**Returns**

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_multiset`.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1303 of file `unordered_set.h`.

**5.1086.4.23 erase()** [3/4]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (  
    const key_type & __x ) [inline]
```

Erases elements according to the provided key.

**Parameters**

<code>__x</code>	Key of element to be erased.
------------------	------------------------------

**Returns**

The number of elements erased.

This function erases all the elements located by the given key from an `unordered_multiset`.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1321 of file `unordered_set.h`.

**5.1086.4.24** erase() [ 4/4 ]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::erase (  
    const_iterator __first,  
    const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an `unordered_multiset`.

**Parameters**

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

**Returns**

The iterator `__last`.

This function erases a sequence of elements from an `unordered_multiset`.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1341 of file `unordered_set.h`.

**5.1086.4.25 find() [1/2]**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) [inline]
```

Tries to locate an element in an `unordered_multiset`.

**Parameters**

<code>__x</code>	Element to be located.
------------------	------------------------

**Returns**

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 1431 of file `unordered_set.h`.

**5.1086.4.26 find() [2/2]**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) const [inline]
```

Tries to locate an element in an `unordered_multiset`.

## Parameters

<code>_↵</code>	Element to be located.
<code>_X</code>	

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 1435 of file `unordered_set.h`.

## 5.1086.4.27 get\_allocator()

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
allocator_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::get_allocator ( ) const
[inline], [noexcept]
```

Returns the allocator object used by the `unordered_multiset`.

Definition at line 1088 of file `unordered_set.h`.

## 5.1086.4.28 hash\_function()

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
hasher std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]
```

Returns the hash functor object with which the `unordered_multiset` was constructed.

Definition at line 1407 of file `unordered_set.h`.

## 5.1086.4.29 insert() [1/6]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (
    const value_type & __x ) [inline]
```

Inserts an element into the `unordered_multiset`.

**Parameters**

	Element to be inserted.
<code>_X</code>	

**Returns**

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1199 of file `unordered_set.h`.

**5.1086.4.30 insert()** [2/6]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (  
    value_type && __x ) [inline]
```

Inserts an element into the `unordered_multiset`.

**Parameters**

	Element to be inserted.
<code>_X</code>	

**Returns**

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1203 of file `unordered_set.h`.

**5.1086.4.31 insert()** [3/6]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (  
    const_iterator __hint,  
    const value_type & __x ) [inline]
```

Inserts an element into the `unordered_multiset`.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

## Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 1225 of file unordered\_set.h.

## 5.1086.4.32 insert() [4/6]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    value_type && __x ) [inline]
```

Inserts an element into the unordered\_multiset.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

## Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 1229 of file unordered\_set.h.

**5.1086.4.33 insert()** [ 5/6]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename _InputIterator >
void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

A template function that inserts a range of elements.

**Parameters**

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 1243 of file unordered\_set.h.

**5.1086.4.34 insert()** [ 6/6]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert (
    initializer_list< value_type > __l ) [inline]
```

Inserts a list of elements into the unordered\_multiset.

**Parameters**

<code>↩</code>	A std::initializer_list<value_type> of elements to be inserted.
<code>__</code> ↩	
<code>↩</code>	
<code>__</code> ↩	
<code>/</code>	

Complexity similar to that of the range constructor.

Definition at line 1254 of file unordered\_set.h.

**5.1086.4.35 key\_eq()**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
key_equal std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]
```

Returns the key comparison object with which the unordered\_multiset was constructed.

Definition at line 1413 of file unordered\_set.h.

#### 5.1086.4.36 load\_factor()

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
float std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline],
[noexcept]
```

Returns the average number of elements per bucket.

Definition at line 1538 of file unordered\_set.h.

#### 5.1086.4.37 max\_bucket\_count()

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const
[inline], [noexcept]
```

Returns the maximum number of buckets of the unordered\_multiset.

Definition at line 1473 of file unordered\_set.h.

#### 5.1086.4.38 max\_load\_factor() [1/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
float std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline],
[noexcept]
```

Returns a positive number that the unordered\_multiset tries to keep the load factor less than or equal to.

Definition at line 1544 of file unordered\_set.h.

#### 5.1086.4.39 max\_load\_factor() [2/2]

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_load_factor (
    float __z ) [inline]
```

Change the unordered\_multiset maximum load factor.

**Parameters**

<code>_Z</code>	The new maximum load factor.
-----------------	------------------------------

Definition at line 1552 of file `unordered_set.h`.

**5.1086.4.40 `max_size()`**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_size ( ) const [inline],
[noexcept]
```

Returns the maximum size of the `unordered_multiset`.

Definition at line 1105 of file `unordered_set.h`.

**5.1086.4.41 `operator=()` [1/3]**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= (
    const unordered_multiset< _Value, _Hash, _Pred, _Alloc > & ) [default]
```

Copy assignment operator.

**5.1086.4.42 `operator=()` [2/3]**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= (
    unordered_multiset< _Value, _Hash, _Pred, _Alloc > && ) [default]
```

Move assignment operator.

**5.1086.4.43 `operator=()` [3/3]**

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= (
    initializer_list< value_type > __l ) [inline]
```

Unordered\_multiset list assignment operator.

## Parameters

$\leftrightarrow$	An initializer_list.
$\_ \leftrightarrow$	
$\leftrightarrow$	
$\_ \leftrightarrow$	
$\_ /$	

This function fills an unordered\_multiset with copies of the elements in the initializer list  $\_ /$ .

Note that the assignment completely changes the unordered\_multiset and that the resulting unordered\_multiset's size is the same as the number of elements assigned.

Definition at line 1080 of file unordered\_set.h.

## 5.1086.4.44 rehash()

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::rehash (
    size_type __n ) [inline]
```

May rehash the unordered\_multiset.

## Parameters

$\_ \leftrightarrow$	The new number of buckets.
$\_ n$	

Rehash will occur only if the new number of buckets respect the unordered\_multiset maximum load factor.

Definition at line 1563 of file unordered\_set.h.

## 5.1086.4.45 reserve()

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::reserve (
    size_type __n ) [inline]
```

Prepare the unordered\_multiset for a specified number of elements.

## Parameters

$\_ \leftrightarrow$	Number of elements required.
$\_ n$	

Same as `rehash(ceil(n / max_load_factor()))`.

Definition at line 1574 of file `unordered_set.h`.

#### 5.1086.4.46 `size()`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::size ( ) const [inline],
[noexcept]
```

Returns the size of the `unordered_multiset`.

Definition at line 1100 of file `unordered_set.h`.

#### 5.1086.4.47 `swap()`

```
template<typename _Value , typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::swap (
    unordered_multiset< _Value, _Hash, _Pred, _Alloc > & __x ) [inline], [noexcept]
```

Swaps data with another `unordered_multiset`.

##### Parameters

<code>__x</code>	An <code>unordered_multiset</code> of the same element and allocator types.
------------------	---

This exchanges the elements between two sets in constant time. Note that the global `std::swap()` function is specialized such that `std::swap(s1,s2)` will feed to this function.

Definition at line 1365 of file `unordered_set.h`.

The documentation for this class was generated from the following file:

#### 5.1087.1 Detailed Description

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc =
allocator<_Value>>
class std::unordered_set< _Value, _Hash, _Pred, _Alloc >
```

A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves.

### Template Parameters

<code>_Value</code>	Type of key objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_Key&gt;</code> .

Meets the requirements of a [container](#), and [unordered associative container](#)

Base is `_Hashtable`, dispatched at compile time via template alias `__uset_hashtable`.

Definition at line 97 of file `unordered_set.h`.

## 5.1087.2 Member Typedef Documentation

### 5.1087.2.1 `allocator_type`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::allocator_type std::unordered\_set<\_Value, \_Hash, \_Pred, \_Alloc>::allocator\_type
```

Public typedefs.

Definition at line 110 of file `unordered_set.h`.

### 5.1087.2.2 `const_iterator`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::const_iterator std::unordered\_set<\_Value, \_Hash, \_Pred, \_Alloc>::const\_iterator
```

Iterator-related typedefs.

Definition at line 120 of file `unordered_set.h`.

### 5.1087.2.3 `const_local_iterator`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::const_local_iterator std::unordered\_set<\_Value, \_Hash, \_Pred, \_Alloc>↵  
::const\_local\_iterator
```

Iterator-related typedefs.

Definition at line 122 of file `unordered_set.h`.

#### 5.1087.2.4 const\_pointer

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::const_pointer std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::const\_pointer
```

Iterator-related typedefs.

Definition at line 116 of file unordered\_set.h.

#### 5.1087.2.5 const\_reference

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::const_reference std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::const\_reference
```

Iterator-related typedefs.

Definition at line 118 of file unordered\_set.h.

#### 5.1087.2.6 difference\_type

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::difference_type std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::difference\_type
```

Iterator-related typedefs.

Definition at line 124 of file unordered\_set.h.

#### 5.1087.2.7 hasher

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::hasher std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::hasher
```

Public typedefs.

Definition at line 108 of file unordered\_set.h.

#### 5.1087.2.8 iterator

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::iterator std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::iterator
```

Iterator-related typedefs.

Definition at line 119 of file unordered\_set.h.

#### 5.1087.2.9 key\_equal

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::key_equal std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::key_equal
```

Public typedefs.

Definition at line 109 of file unordered\_set.h.

#### 5.1087.2.10 key\_type

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::key_type std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::key_type
```

Public typedefs.

Definition at line 106 of file unordered\_set.h.

#### 5.1087.2.11 local\_iterator

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
typedef _Hashtable::local_iterator std::unordered\_set< _Value, _Hash, _Pred, _Alloc >::local_iterator
```

Iterator-related typedefs.

Definition at line 121 of file unordered\_set.h.

#### 5.1087.2.12 pointer

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::pointer std::unordered\_set< \_Value, \_Hash, \_Pred, \_Alloc >::pointer
```

Iterator-related typedefs.

Definition at line 115 of file unordered\_set.h.

#### 5.1087.2.13 reference

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::reference std::unordered\_set< \_Value, \_Hash, \_Pred, \_Alloc >::reference
```

Iterator-related typedefs.

Definition at line 117 of file unordered\_set.h.

#### 5.1087.2.14 size\_type

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::size_type std::unordered\_set< \_Value, \_Hash, \_Pred, \_Alloc >::size\_type
```

Iterator-related typedefs.

Definition at line 123 of file unordered\_set.h.

#### 5.1087.2.15 value\_type

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,  
typename _Alloc = allocator<_Value>>  
typedef _Hashtable::value_type std::unordered\_set< \_Value, \_Hash, \_Pred, \_Alloc >::value\_type
```

Public typedefs.

Definition at line 107 of file unordered\_set.h.

### 5.1087.3 Constructor & Destructor Documentation

**5.1087.3.1 unordered\_set()** [1/7]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set ( ) [default]
```

Default constructor.

**5.1087.3.2 unordered\_set()** [2/7]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (
    size_type __n,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline], [explicit]
```

Default constructor creates no elements.

**Parameters**

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq1</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 145 of file unordered\_set.h.

**5.1087.3.3 unordered\_set()** [3/7]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename _InputIterator >
std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (
    _InputIterator __first,
    _InputIterator __last,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an unordered\_set from a range.

**Parameters**

<code>__first</code>	An input iterator.
----------------------	--------------------

## Parameters

<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_set` consisting of copies of the elements from `[__first,__last)`. This is linear in `N` (where `N` is `distance(__first,__last)`).

Definition at line 166 of file `unordered_set.h`.

## 5.1087.3.4 unordered\_set() [4/7]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (
    const unordered_set< _Value, _Hash, _Pred, _Alloc > & ) [default]
```

Copy constructor.

## 5.1087.3.5 unordered\_set() [5/7]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (
    unordered_set< _Value, _Hash, _Pred, _Alloc > && ) [default]
```

Move constructor.

## 5.1087.3.6 unordered\_set() [6/7]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (
    const allocator_type & __a ) [inline], [explicit]
```

Creates an `unordered_set` with no elements.

## Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 185 of file unordered\_set.h.

### 5.1087.3.7 unordered\_set() [7/7]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::unordered_set< _Value, _Hash, _Pred, _Alloc >::unordered_set (
    initializer_list< value_type > __l,
    size_type __n = 0,
    const hasher & __hf = hasher(),
    const key_equal & __eq1 = key_equal(),
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds an unordered\_set from an initializer\_list.

#### Parameters

<code>__l</code>	An initializer_list.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq1</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an unordered\_set consisting of copies of the elements in the list. This is linear in N (where N is `__l.size()`).

Definition at line 220 of file unordered\_set.h.

## 5.1087.4 Member Function Documentation

### 5.1087.4.1 begin() [1/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin ( ) [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_set.

Definition at line 319 of file unordered\_set.h.

#### 5.1087.4.2 begin() [2/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_set.

Definition at line 323 of file unordered\_set.h.

#### 5.1087.4.3 begin() [3/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin (
    size_type __n ) [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

##### Parameters

$\_n$	The bucket index.
-------	-------------------

##### Returns

A read-only local iterator.

Definition at line 726 of file unordered\_set.h.

#### 5.1087.4.4 begin() [4/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::begin (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

##### Parameters

$\_n$	The bucket index.
-------	-------------------

**Returns**

A read-only local iterator.

Definition at line 730 of file unordered\_set.h.

**5.1087.4.5 bucket\_count()**

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::bucket_count ( ) const [inline],
[noexcept]
```

Returns the number of buckets of the unordered\_set.

Definition at line 692 of file unordered\_set.h.

**5.1087.4.6 cbegin()** [1/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cbegin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_set.

Definition at line 346 of file unordered\_set.h.

**5.1087.4.7 cbegin()** [2/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cbegin (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

**Parameters**

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 734 of file unordered\_set.h.

**5.1087.4.8 cend()** [1/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cend ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the unordered\_set.

Definition at line 354 of file unordered\_set.h.

**5.1087.4.9 cend()** [2/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::cend (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 754 of file unordered\_set.h.

**5.1087.4.10 clear()**

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]
```

Erases all elements in an `unordered_set`. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 572 of file `unordered_set.h`.

#### 5.1087.4.11 `count()`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::count (
    const key_type & __x ) const [inline]
```

Finds the number of elements.

##### Parameters

<code>__x</code>	Element to located.
------------------	---------------------

##### Returns

Number of elements with specified key.

This function only makes sense for `unordered_multisets`; for `unordered_set` the result will either be 0 (not present) or 1 (present).

Definition at line 667 of file `unordered_set.h`.

#### 5.1087.4.12 `emplace()`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename... _Args>
std::pair<iterator, bool> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::emplace (
    _Args &&... __args ) [inline]
```

Attempts to build and insert an element into the `unordered_set`.

##### Parameters

<code>__args</code>	Arguments used to generate an element.
---------------------	--

**Returns**

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to build and insert an element into the unordered\_set. An unordered\_set relies on unique keys and thus an element is only inserted if it is not already present in the unordered\_set.

Insertion requires amortized constant time.

Definition at line 376 of file unordered\_set.h.

**5.1087.4.13   emplace\_hint()**

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename... _Args>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::emplace_hint (
    const_iterator __pos,
    _Args &&... __args ) [inline]
```

Attempts to insert an element into the unordered\_set.

**Parameters**

<code>__pos</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__args</code>	Arguments used to generate the element to be inserted.

**Returns**

An iterator that points to the element with key equivalent to the one generated from `__args` (may or may not be the element itself).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `emplace()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints)

Insertion requires amortized constant time.

Definition at line 402 of file unordered\_set.h.

**5.1087.4.14** `empty()`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
bool std::unordered_set< _Value, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]
```

Returns true if the `unordered_set` is empty.

Definition at line 298 of file `unordered_set.h`.

**5.1087.4.15** `end()` [1/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_set`.

Definition at line 333 of file `unordered_set.h`.

**5.1087.4.16** `end()` [2/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_set`.

Definition at line 337 of file `unordered_set.h`.

**5.1087.4.17** `end()` [3/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end (
    size_type __n ) [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 746 of file unordered\_set.h.

**5.1087.4.18 end()** [4/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_local_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::end (
    size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

$\_n$	The bucket index.
-------	-------------------

**Returns**

A read-only local iterator.

Definition at line 750 of file unordered\_set.h.

**5.1087.4.19 equal\_range()** [1/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::pair<iterator, iterator> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::equal_range (
    const key_type & __x ) [inline]
```

Finds a subsequence matching given key.

**Parameters**

$\_x$	Key to be located.
-------	--------------------

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for multisets.

Definition at line 680 of file unordered\_set.h.

#### 5.1087.4.20 equal\_range() [2/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::pair<const_iterator, const_iterator> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::
::equal_range (
    const key_type & __x ) const [inline]
```

Finds a subsequence matching given key.

##### Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

##### Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for multisets.

Definition at line 684 of file unordered\_set.h.

#### 5.1087.4.21 erase() [1/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (
    const_iterator __position ) [inline]
```

Erases an element from an unordered\_set.

##### Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

##### Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_set`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 522 of file unordered\_set.h.

#### 5.1087.4.22 erase() [2/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (
    iterator __position ) [inline]
```

Erases an element from an unordered\_set.

##### Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

##### Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an unordered\_set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 527 of file unordered\_set.h.

#### 5.1087.4.23 erase() [3/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (
    const key_type & __x ) [inline]
```

Erases elements according to the provided key.

##### Parameters

<code>__x</code>	Key of element to be erased.
------------------	------------------------------

##### Returns

The number of elements erased.

This function erases all the elements located by the given key from an unordered\_set. For an unordered\_set the result of this function can only be 0 (not present) or 1 (present). Note that this function only erases the element, and that

if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 544 of file `unordered_set.h`.

#### 5.1087.4.24 `erase()` [4/4]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::erase (
    const_iterator __first,
    const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an `unordered_set`.

##### Parameters

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

##### Returns

The iterator `__last`.

This function erases a sequence of elements from an `unordered_set`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 562 of file `unordered_set.h`.

#### 5.1087.4.25 `find()` [1/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) [inline]
```

Tries to locate an element in an `unordered_set`.

##### Parameters

<code>__x</code>	Element to be located.
------------------	------------------------

**Returns**

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( end() ) iterator.

Definition at line 649 of file unordered\_set.h.

**5.1087.4.26 find()** [2/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
const_iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::find (
    const key_type & __x ) const [inline]
```

Tries to locate an element in an unordered\_set.

**Parameters**

$\_x$	Element to be located.
-------	------------------------

**Returns**

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( end() ) iterator.

Definition at line 653 of file unordered\_set.h.

**5.1087.4.27 get\_allocator()**

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
allocator_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::get_allocator ( ) const [inline],
[noexcept]
```

Returns the allocator object used by the unordered\_set.

Definition at line 291 of file unordered\_set.h.

**5.1087.4.28** `hash_function()`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
hasher std::unordered_set< _Value, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]
```

Returns the hash functor object with which the `unordered_set` was constructed.

Definition at line 625 of file `unordered_set.h`.

**5.1087.4.29** `insert()` [1/6]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::pair<iterator, bool> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (
    const value_type & __x ) [inline]
```

Attempts to insert an element into the `unordered_set`.

**Parameters**

<code>__x</code>	Element to be inserted.
------------------	-------------------------

**Returns**

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a `bool` that is true if the element was actually inserted.

This function attempts to insert an element into the `unordered_set`. An `unordered_set` relies on unique keys and thus an element is only inserted if it is not already present in the `unordered_set`.

Insertion requires amortized constant time.

Definition at line 420 of file `unordered_set.h`.

**5.1087.4.30** `insert()` [2/6]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
std::pair<iterator, bool> std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (
    value_type && __x ) [inline]
```

Attempts to insert an element into the `unordered_set`.

## Parameters

<code>__x</code>	Element to be inserted.
------------------	-------------------------

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the unordered\_set. An unordered\_set relies on unique keys and thus an element is only inserted if it is not already present in the unordered\_set.

Insertion requires amortized constant time.

Definition at line 424 of file unordered\_set.h.

## 5.1087.4.31 insert() [3/6]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    const value_type & __x ) [inline]
```

Attempts to insert an element into the unordered\_set.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

## Returns

An iterator that points to the element with key of `__x` (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 449 of file unordered\_set.h.

**5.1087.4.32 insert()** [4/6]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
iterator std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (
    const_iterator __hint,
    value_type && __x ) [inline]
```

Attempts to insert an element into the `unordered_set`.

**Parameters**

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

**Returns**

An iterator that points to the element with key of `__x` (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 453 of file `unordered_set.h`.

**5.1087.4.33 insert()** [5/6]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
template<typename _InputIterator >
void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

A template function that attempts to insert a range of elements.

**Parameters**

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 468 of file unordered\_set.h.

#### 5.1087.4.34 insert() [6/6]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert (
    initializer_list< value_type > __l ) [inline]
```

Attempts to insert a list of elements into the unordered\_set.

##### Parameters

↩	A std::initializer_list<value_type> of elements to be inserted.
↩	
↩	
↩	
↩	
↩	

Complexity similar to that of the range constructor.

Definition at line 479 of file unordered\_set.h.

#### 5.1087.4.35 key\_eq()

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
key_equal std::unordered_set< _Value, _Hash, _Pred, _Alloc >::key_eq ( ) const [inline]
```

Returns the key comparison object with which the unordered\_set was constructed.

Definition at line 631 of file unordered\_set.h.

#### 5.1087.4.36 load\_factor()

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
float std::unordered_set< _Value, _Hash, _Pred, _Alloc >::load_factor ( ) const [inline], [noexcept]
```

Returns the average number of elements per bucket.

Definition at line 762 of file unordered\_set.h.

**5.1087.4.37** `max_bucket_count()`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_bucket_count ( ) const [inline],
[noexcept]
```

Returns the maximum number of buckets of the `unordered_set`.

Definition at line 697 of file `unordered_set.h`.

**5.1087.4.38** `max_load_factor()` [1/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
float std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_load_factor ( ) const [inline],
[noexcept]
```

Returns a positive number that the `unordered_set` tries to keep the load factor less than or equal to.

Definition at line 768 of file `unordered_set.h`.

**5.1087.4.39** `max_load_factor()` [2/2]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_load_factor (
    float __z ) [inline]
```

Change the `unordered_set` maximum load factor.

**Parameters**

<code>__z</code>	The new maximum load factor.
------------------	------------------------------

Definition at line 776 of file `unordered_set.h`.

**5.1087.4.40** `max_size()`

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::max_size ( ) const [inline], [noexcept]
```

Returns the maximum size of the unordered\_set.

Definition at line 308 of file unordered\_set.h.

#### 5.1087.4.41 operator=() [1/3]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
unordered_set& std::unordered_set< _Value, _Hash, _Pred, _Alloc >::operator= (
    const unordered_set< _Value, _Hash, _Pred, _Alloc > & ) [default]
```

Copy assignment operator.

#### 5.1087.4.42 operator=() [2/3]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
unordered_set& std::unordered_set< _Value, _Hash, _Pred, _Alloc >::operator= (
    unordered_set< _Value, _Hash, _Pred, _Alloc > && ) [default]
```

Move assignment operator.

#### 5.1087.4.43 operator=() [3/3]

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
unordered_set& std::unordered_set< _Value, _Hash, _Pred, _Alloc >::operator= (
    initializer_list< value_type > __l ) [inline]
```

Unordered\_set list assignment operator.

##### Parameters

↩	An initializer_list.
↩	
↩	
↩	
/	

This function fills an unordered\_set with copies of the elements in the initializer list \_\_l.

Note that the assignment completely changes the unordered\_set and that the resulting unordered\_set's size is the same as the number of elements assigned.

Definition at line 283 of file unordered\_set.h.

#### 5.1087.4.44 rehash()

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::rehash (
    size_type __n ) [inline]
```

May rehash the unordered\_set.

##### Parameters

<code><math>\leftarrow</math></code> <code>__n</code>	The new number of buckets.
--	----------------------------

Rehash will occur only if the new number of buckets respect the unordered\_set maximum load factor.

Definition at line 787 of file unordered\_set.h.

#### 5.1087.4.45 reserve()

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::reserve (
    size_type __n ) [inline]
```

Prepare the unordered\_set for a specified number of elements.

##### Parameters

<code><math>\leftarrow</math></code> <code>__n</code>	Number of elements required.
--	------------------------------

Same as rehash(ceil(n / max\_load\_factor())).

Definition at line 798 of file unordered\_set.h.

#### 5.1087.4.46 size()

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::size ( ) const [inline], [noexcept]
```

Returns the size of the unordered\_set.

Definition at line 303 of file unordered\_set.h.

#### 5.1087.4.47 swap()

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>>
void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::swap (
    unordered_set< _Value, _Hash, _Pred, _Alloc > & __x ) [inline], [noexcept]
```

Swaps data with another unordered\_set.

#### Parameters

<code>__x</code>	An unordered_set of the same element and allocator types.
------------------	---

This exchanges the elements between two sets in constant time. Note that the global std::swap() function is specialized such that std::swap(s1,s2) will feed to this function.

Definition at line 585 of file unordered\_set.h.

The documentation for this class was generated from the following file:

## 5.1088 std::uses\_allocator<\_Tp, \_Alloc > Struct Template Reference

Inherits type<\_Tp, \_Alloc >.

### 5.1088.1 Detailed Description

```
template<typename _Tp, typename _Alloc>
struct std::uses_allocator<_Tp, _Alloc >
```

Declare uses\_allocator so it can be specialized in <queue> etc.

[allocator.uses.trait]

Definition at line 72 of file memoryfwd.h.

The documentation for this struct was generated from the following file:

- [memoryfwd.h](#)

## 5.1089 std::uses\_allocator< tuple< \_Types... >, \_Alloc > Struct Template Reference

Inheritance diagram for std::uses\_allocator< tuple< \_Types... >, \_Alloc >:

### Public Types

- typedef [integral\\_constant](#)< \_Tp, \_\_v > **type**

## Friends

- `class _Array<_Tp>`

## 5.1090.1 Detailed Description

```
template<class _Tp>
class std::valarray<_Tp>
```

Smart array designed to support numeric processing.

A valarray is an array that provides constraints intended to allow for effective optimization of numeric array processing by reducing the aliasing that can result from pointer representations. It represents a one-dimensional array from which different multidimensional subsets can be accessed and modified.

## Template Parameters

<code>_Tp</code>	Type of object in the array.
------------------	------------------------------

Definition at line 78 of file valarray.

## 5.1090.2 Constructor &amp; Destructor Documentation

5.1090.2.1 `valarray()`

```
template<class _Tp>
std::valarray<_Tp>::valarray (
    const _Tp * __restrict__,
    size_t )
```

Construct an array initialized to the first  $n$  elements of  $t$ .

The documentation for this class was generated from the following file:

- [valarray](#)

## 5.1091.1 Detailed Description

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
class std::vector<_Tp, _Alloc>
```

A standard container which offers fixed time access to individual elements in any order.

## Template Parameters

<code>_Tp</code>	Type of element.
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_Tp&gt;</code> .

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `push_front` and `pop_front`.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

Definition at line 339 of file `stl_vector.h`.

## 5.1091.2 Constructor &amp; Destructor Documentation

5.1091.2.1 `vector()` [1/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector<_Tp, _Alloc>::vector ( ) [inline], [noexcept]
```

Creates a vector with no elements.

Definition at line 391 of file `stl_vector.h`.

5.1091.2.2 `vector()` [2/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector<_Tp, _Alloc>::vector (
    const allocator_type & __a ) [inline], [explicit], [noexcept]
```

Creates a vector with no elements.

## Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 402 of file `stl_vector.h`.

#### 5.1091.2.3 `vector()` [3/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector< _Tp, _Alloc >::vector (
    size_type __n,
    const allocator_type & __a = allocator_type() ) [inline], [explicit]
```

Creates a vector with default constructed elements.

##### Parameters

<code>__n</code>	The number of elements to initially create.
<code>__a</code>	An allocator.

This constructor fills the vector with `__n` default constructed elements.

Definition at line 415 of file `stl_vector.h`.

#### 5.1091.2.4 `vector()` [4/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector< _Tp, _Alloc >::vector (
    size_type __n,
    const value_type & __value,
    const allocator_type & __a = allocator_type() ) [inline]
```

Creates a vector with copies of an exemplar element.

##### Parameters

<code>__n</code>	The number of elements to initially create.
<code>__value</code>	An element to copy.
<code>__a</code>	An allocator.

This constructor fills the vector with `__n` copies of `__value`.

Definition at line 427 of file `stl_vector.h`.

## 5.1091.2.5 vector() [5/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector< _Tp, _Alloc >::vector (
    const vector< _Tp, _Alloc > & __x ) [inline]
```

Vector copy constructor.

## Parameters

	A vector of identical element and allocator types.
<code>__x</code>	

All the elements of `__x` are copied, but any unused capacity in `__x` will not be copied (i.e. `capacity() == size()` in the new vector).

The newly-created vector uses a copy of the allocator object used by `__x` (unless the allocator traits dictate a different object).

Definition at line 458 of file `stl_vector.h`.

## 5.1091.2.6 vector() [6/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector< _Tp, _Alloc >::vector (
    vector< _Tp, _Alloc > && __x ) [inline], [noexcept]
```

Vector move constructor.

## Parameters

	A vector of identical element and allocator types.
<code>__x</code>	

The newly-created vector contains the exact contents of `__x`. The contents of `__x` are a valid, but unspecified vector.

Definition at line 476 of file `stl_vector.h`.

## 5.1091.2.7 vector() [7/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector< _Tp, _Alloc >::vector (
    const vector< _Tp, _Alloc > & __x,
    const allocator_type & __a ) [inline]
```

Copy constructor with alternative allocator.

Definition at line 480 of file `stl_vector.h`.

**5.1091.2.8** `vector()` [8/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector< _Tp, _Alloc >::vector (
    vector< _Tp, _Alloc > && __rv,
    const allocator_type & __m ) [inline], [noexcept]
```

Move constructor with alternative allocator.

Definition at line 490 of file `stl_vector.h`.

**5.1091.2.9** `vector()` [9/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector< _Tp, _Alloc >::vector (
    initializer_list< value_type > __l,
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds a vector from an initializer list.

**Parameters**

<code>__l</code>	An initializer_list.
<code>__a</code>	An allocator.

Create a vector consisting of copies of the elements in the initializer\_list `__l`.

This will call the element type's copy constructor N times (where N is `__l.size()`) and do no memory reallocation.

Definition at line 515 of file `stl_vector.h`.

**5.1091.2.10** `vector()` [10/10]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator , typename = std::RequireInputIter<_InputIterator>>
std::vector< _Tp, _Alloc >::vector (
    _InputIterator __first,
    _InputIterator __last,
    const allocator_type & __a = allocator_type() ) [inline]
```

Builds a vector from a range.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__a</code>	An allocator.

Create a vector consisting of copies of the elements from `[first,last)`.

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor  $N$  times (where  $N$  is `distance(first,last)`) and do no memory reallocation. But if only input iterators are used, then this will do at most  $2N$  calls to the copy constructor, and  $\log N$  memory reallocations.

Definition at line 543 of file `std_vector.h`.

#### 5.1091.2.11 `~vector()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::vector<_Tp, _Alloc>::~~vector ( ) [inline], [noexcept]
```

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 565 of file `std_vector.h`.

### 5.1091.3 Member Function Documentation

#### 5.1091.3.1 `_M_allocate_and_copy()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _ForwardIterator >
pointer std::vector<_Tp, _Alloc>::_M_allocate_and_copy (
    size_type __n,
    _ForwardIterator __first,
    _ForwardIterator __last ) [inline], [protected]
```

Memory expansion handler. Uses the member allocation function to obtain  $n$  bytes of memory, and then copies `[first,last)` into it.

Definition at line 1395 of file `std_vector.h`.

#### 5.1091.3.2 `_M_range_check()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::_M_range_check (
    size_type __n ) const [inline], [protected]
```

Safety check used only from `at()`.

Definition at line 957 of file `std_vector.h`.

Referenced by `std::vector< sub_match<_Bi_iter>, allocator< sub_match<_Bi_iter>>>::at()`.

#### 5.1091.3.3 `assign()` [1/3]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::assign (
    size_type __n,
    const value_type & __val ) [inline]
```

Assigns a given value to a vector.

**Parameters**

<code>__n</code>	Number of elements to be assigned.
<code>__val</code>	Value to be assigned.

This function fills a vector with `__n` copies of the given value. Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 636 of file `stl_vector.h`.

**5.1091.3.4 `assign()`** [2/3]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
void std::vector<_Tp, _Alloc>::assign (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Assigns a range to a vector.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.

This function fills a vector with copies of the elements in the range `[__first,__last)`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 655 of file `stl_vector.h`.

**5.1091.3.5 `assign()`** [3/3]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::assign (
    initializer_list<value_type> __l ) [inline]
```

Assigns an initializer list to a vector.

## Parameters

<code>↩</code>	An initializer_list.
<code>↩</code>	
<code>↩</code>	
<code>↩</code>	
<code>/</code>	

This function fills a vector with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 681 of file `stl_vector.h`.

5.1091.3.6 `at()` [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::vector<_Tp, _Alloc>::at (
    size_type __n ) [inline]
```

Provides access to the data contained in the vector.

## Parameters

<code>↩</code>	The index of the element for which data should be accessed.
<code>__n</code>	

## Returns

Read/write reference to data.

## Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws `out_of_range` if the check fails.

Definition at line 979 of file `stl_vector.h`.

5.1091.3.7 `at()` [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::vector<_Tp, _Alloc>::at (
    size_type __n ) const [inline]
```

Provides access to the data contained in the vector.

## Parameters

<code>↵</code> <code>_n</code>	The index of the element for which data should be accessed.
-----------------------------------	---

## Returns

Read-only (constant) reference to data.

## Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws `out_of_range` if the check fails.

Definition at line 997 of file `stl_vector.h`.

5.1091.3.8 `back()` [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::vector<_Tp, _Alloc>::back ( ) [inline], [noexcept]
```

Returns a read/write reference to the data at the last element of the vector.

Definition at line 1030 of file `stl_vector.h`.

Referenced by `std::piecewise_constant_distribution<_RealType>::max()`, and `std::piecewise_linear_distribution<↵_RealType>::max()`.

5.1091.3.9 `back()` [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::vector<_Tp, _Alloc>::back ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the vector.

Definition at line 1041 of file `stl_vector.h`.

**5.1091.3.10 begin()** [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
iterator std::vector< _Tp, _Alloc >::begin ( ) [inline], [noexcept]
```

Returns a read/write iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 698 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::crend()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::empty()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::erase()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::insert()`, `std::operator<()`, `std::operator==()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::rend()`, and `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::vector()`.

**5.1091.3.11 begin()** [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
const_iterator std::vector< _Tp, _Alloc >::begin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 707 of file `stl_vector.h`.

**5.1091.3.12 capacity()**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
size_type std::vector< _Tp, _Alloc >::capacity ( ) const [inline], [noexcept]
```

Returns the total number of elements that the vector can hold before needing to allocate more memory.

Definition at line 885 of file `stl_vector.h`.

**5.1091.3.13 cbegin()**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
const_iterator std::vector< _Tp, _Alloc >::cbegin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 771 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::erase()`, and `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::insert()`.

#### 5.1091.3.14 `cend()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::vector< _Tp, _Alloc >::cend ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 780 of file `stl_vector.h`.

#### 5.1091.3.15 `clear()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector< _Tp, _Alloc >::clear ( ) [inline], [noexcept]
```

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1385 of file `stl_vector.h`.

#### 5.1091.3.16 `crbegin()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::vector< _Tp, _Alloc >::crbegin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 789 of file `stl_vector.h`.

#### 5.1091.3.17 `crend()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::vector< _Tp, _Alloc >::crend ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 798 of file `stl_vector.h`.

**5.1091.3.18 data()**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
_Tp* std::vector<_Tp, _Alloc>::data ( ) [inline], [noexcept]
```

Returns a pointer such that [data(), data() + size()) is a valid range. For a non-empty vector, data() == &front().

Definition at line 1055 of file stl\_vector.h.

Referenced by std::regex\_traits<\_CharType>::transform\_primary().

**5.1091.3.19 emplace()**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename... _Args>
iterator std::vector<_Tp, _Alloc>::emplace (
    const_iterator __position,
    _Args &&... __args ) [inline]
```

Inserts an object in vector before specified iterator.

**Parameters**

<code>__position</code>	A const_iterator into the vector.
<code>__args</code>	Arguments.

**Returns**

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1135 of file stl\_vector.h.

**5.1091.3.20 empty()**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
bool std::vector<_Tp, _Alloc>::empty ( ) const [inline], [noexcept]
```

Returns true if the vector is empty. (Thus begin() would equal end().)

Definition at line 894 of file stl\_vector.h.

Referenced by std::piecewise\_constant\_distribution<\_RealType>::densities(), std::piecewise\_linear\_distribution<\_RealType>::densities(), std::piecewise\_constant\_distribution<\_RealType>::intervals(), std::piecewise\_linear\_distribution<\_RealType>::intervals(), std::discrete\_distribution<\_IntType>::max(), std::piecewise\_constant\_distribution<\_RealType>::max(), std::piecewise\_linear\_distribution<\_RealType>::max(), std::piecewise\_constant\_distribution<\_RealType>::min(), std::piecewise\_linear\_distribution<\_RealType>::min(), and std::discrete\_distribution<\_IntType>::probabilities().

**5.1091.3.21 end()** [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::end ( ) [inline], [noexcept]
```

Returns a read/write iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 716 of file `std_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::cbegin()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::empty()`, `std::operator<()`, `std::operator==()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::rbegin()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::resize()`, and `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::vector()`.

**5.1091.3.22 end()** [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_iterator std::vector< _Tp, _Alloc >::end ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 725 of file `std_vector.h`.

**5.1091.3.23 erase()** [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::erase (
    const_iterator __position ) [inline]
```

Remove element at given position.

**Parameters**

<code>__position</code>	Iterator pointing to element to be erased.
-------------------------	--

**Returns**

An iterator pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1317 of file `stl_vector.h`.

#### 5.1091.3.24 `erase()` [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::erase (
    const_iterator __first,
    const_iterator __last ) [inline]
```

Remove a range of elements.

##### Parameters

<code>__first</code>	Iterator pointing to the first element to be erased.
<code>__last</code>	Iterator pointing to one past the last element to be erased.

##### Returns

An iterator pointing to the element pointed to by `__last` prior to erasing (or `end()`).

This function will erase the elements in the range `[__first,__last)` and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1344 of file `stl_vector.h`.

#### 5.1091.3.25 `front()` [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::vector< _Tp, _Alloc >::front ( ) [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the vector.

Definition at line 1008 of file `stl_vector.h`.

Referenced by `std::piecewise_constant_distribution< _RealType >::min()`, and `std::piecewise_linear_distribution< _RealType >::min()`.

**5.1091.3.26** `front()` [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::vector<_Tp, _Alloc>::front ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the vector.

Definition at line 1019 of file `std_vector.h`.

**5.1091.3.27** `get_allocator()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
allocator_type std::_Vector_base<_Tp, _Alloc>::get_allocator [inline], [noexcept]
```

Get a copy of the memory allocation object.

Definition at line 245 of file `std_vector.h`.

**5.1091.3.28** `insert()` [1/5]

```
template<typename _Tp , typename _Alloc >
vector<_Tp, _Alloc>::iterator vector::insert (
    const_iterator __position,
    const value_type & __x )
```

Inserts given value into vector before specified iterator.

**Parameters**

<code>__position</code>	A <code>const_iterator</code> into the vector.
<code>__x</code>	Data to be inserted.

**Returns**

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 120 of file `vector.tcc`.

**5.1091.3.29** `insert()` [2/5]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::insert (
    const_iterator __position,
    value_type && __x ) [inline]
```

Inserts given rvalue into vector before specified iterator.

**Parameters**

<code>__position</code>	A const_iterator into the vector.
<code>__x</code>	Data to be inserted.

**Returns**

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1180 of file `stl_vector.h`.

**5.1091.3.30** `insert()` [3/5]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::insert (
    const_iterator __position,
    initializer_list< value_type > __l ) [inline]
```

Inserts an `initializer_list` into the vector.

**Parameters**

<code>__position</code>	An iterator into the vector.
<code>__l</code>	An <code>initializer_list</code> .

This function will insert copies of the data in the `initializer_list l` into the vector before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1197 of file `stl_vector.h`.

**5.1091.3.31 insert()** [4/5]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::insert (
    const_iterator __position,
    size_type __n,
    const value_type & __x ) [inline]
```

Inserts a number of copies of given data into the vector.

**Parameters**

<code>__position</code>	A const_iterator into the vector.
<code>__n</code>	Number of elements to be inserted.
<code>__x</code>	Data to be inserted.

**Returns**

An iterator that points to the inserted data.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1222 of file `stl_vector.h`.

**5.1091.3.32 insert()** [5/5]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>>>
iterator std::vector< _Tp, _Alloc >::insert (
    const_iterator __position,
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Inserts a range into the vector.

**Parameters**

<code>__position</code>	A const_iterator into the vector.
<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.

**Returns**

An iterator that points to the inserted data.

This function will insert copies of the data in the range `[__first,__last)` into the vector before the location specified by *pos*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1266 of file `stl_vector.h`.

**5.1091.3.33 `max_size()`**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
size_type std::vector< _Tp, _Alloc >::max_size ( ) const [inline], [noexcept]
```

Returns the `size()` of the largest possible vector.

Definition at line 810 of file `stl_vector.h`.

**5.1091.3.34 `operator=()` [1/3]**

```
template<typename _Tp , typename _Alloc >
vector< _Tp, _Alloc > & vector::operator= (
    const vector< _Tp, _Alloc > & __x )
```

Vector assignment operator.

**Parameters**

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

All the elements of `__x` are copied, but any unused capacity in `__x` will not be copied.

Whether the allocator is copied depends on the allocator traits.

Definition at line 187 of file `vector.tcc`.

**5.1091.3.35 `operator=()` [2/3]**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
vector& std::vector< _Tp, _Alloc >::operator= (
    vector< _Tp, _Alloc > && __x ) [inline], [noexcept]
```

Vector move assignment operator.

## Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

The contents of `__x` are moved into this vector (without copying, if the allocators permit it). Afterwards `__x` is a valid, but unspecified vector.

Whether the allocator is moved depends on the allocator traits.

Definition at line 596 of file `std_vector.h`.

## 5.1091.3.36 operator=() [3/3]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
vector& std::vector< _Tp, _Alloc >::operator= (
    initializer_list< value_type > __l ) [inline]
```

Vector list assignment operator.

## Parameters

<code>__l</code>	An <code>initializer_list</code> .
------------------	------------------------------------

This function fills a vector with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 617 of file `std_vector.h`.

## 5.1091.3.37 operator[]() [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reference std::vector< _Tp, _Alloc >::operator[] (
    size_type __n ) [inline], [noexcept]
```

Subscript access to the data contained in the vector.

**Parameters**

 <code>_n</code>	The index of the element for which data should be accessed.
--	---

**Returns**

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 930 of file `stl_vector.h`.

**5.1091.3.38 operator[]()** [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reference std::vector< _Tp, _Alloc >::operator[] (
    size_type __n ) const [inline], [noexcept]
```

Subscript access to the data contained in the vector.

**Parameters**

 <code>_n</code>	The index of the element for which data should be accessed.
--	---

**Returns**

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 948 of file `stl_vector.h`.

**5.1091.3.39 pop\_back()**

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector< _Tp, _Alloc >::pop_back ( ) [inline], [noexcept]
```

Removes last element.

This is a typical stack operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before `pop_back()` is called.

Definition at line 1112 of file `stl_vector.h`.

5.1091.3.40 `push_back()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::push_back (
    const value_type & __x ) [inline]
```

Add data to the end of the vector.

## Parameters

<code>__x</code>	Data to be added.
------------------	-------------------

This is a typical stack operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

Definition at line 1074 of file `std_vector.h`.

5.1091.3.41 `rbegin()` [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reverse_iterator std::vector<_Tp, _Alloc>::rbegin ( ) [inline], [noexcept]
```

Returns a read/write reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 734 of file `std_vector.h`.

5.1091.3.42 `rbegin()` [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::vector<_Tp, _Alloc>::rbegin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 743 of file `std_vector.h`.

5.1091.3.43 `rend()` [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
reverse_iterator std::vector<_Tp, _Alloc>::rend ( ) [inline], [noexcept]
```

Returns a read/write reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 752 of file `std_vector.h`.

**5.1091.3.44** `rend()` [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::vector< _Tp, _Alloc >::rend ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 761 of file `stl_vector.h`.

**5.1091.3.45** `reserve()`

```
template<typename _Tp , typename _Alloc >
void vector::reserve (
    size_type __n )
```

Attempt to preallocate enough memory for specified number of elements.

**Parameters**

<code>__n</code>	Number of elements required.
------------------	------------------------------

**Exceptions**

<code>std::length_error</code>	If <code>n</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

Definition at line 67 of file `vector.tcc`.

**5.1091.3.46** `resize()` [1/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector< _Tp, _Alloc >::resize (
    size_type __new_size ) [inline]
```

Resizes the vector to the specified number of elements.

## Parameters

<code>__new_size</code>	Number of elements the vector should contain.
-------------------------	---

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise default constructed elements are appended.

Definition at line 824 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink_and_double()`.

5.1091.3.47 `resize()` [2/2]

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::resize (
    size_type __new_size,
    const value_type & __x ) [inline]
```

Resizes the vector to the specified number of elements.

## Parameters

<code>__new_size</code>	Number of elements the vector should contain.
<code>__x</code>	Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

Definition at line 844 of file `stl_vector.h`.

5.1091.3.48 `shrink_to_fit()`

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::shrink_to_fit ( ) [inline]
```

A non-binding request to reduce `capacity()` to `size()`.

Definition at line 876 of file `stl_vector.h`.

### 5.1091.3.49 size()

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
size_type std::vector< _Tp, _Alloc >::size ( ) const [inline], [noexcept]
```

Returns the number of elements in the vector.

Definition at line 805 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink()`, `__gnu_parallel::__shrink_and_double()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::M_range_check()`, `__gnu_parallel::list_partition()`, `std::discrete_distribution< _IntType >::max()`, `std::operator==()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::resize()`, and `std::regex_traits< _CharType >::transform_primary()`.

### 5.1091.3.50 swap()

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>>
void std::vector< _Tp, _Alloc >::swap (
    vector< _Tp, _Alloc > & __x ) [inline], [noexcept]
```

Swaps data with another vector.

#### Parameters

<code>__x</code>	A vector of the same element and allocator types.
------------------	---

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(v1,v2)` will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 1367 of file `stl_vector.h`.

The documentation for this class was generated from the following files:

- [stl\\_vector.h](#)
- [vector.tcc](#)

#### 5.1092.1 Detailed Description

```
template<typename _Alloc>
class std::vector< bool, _Alloc >
```

A specialization of vector for booleans which offers fixed time access to individual elements in any order.

#### Template Parameters

<code>_Alloc</code>	Allocator type.
---------------------	-----------------

Note that `vector<bool>` does not actually meet the requirements for being a container. This is because the reference and pointer types are not really references and pointers to `bool`. See DR96 for details.

#### See also

`vector` for function documentation.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

Definition at line 588 of file `stl_bvector.h`.

The documentation for this class was generated from the following files:

- [stl\\_bvector.h](#)
- [vector.tcc](#)

### 5.1093.1 Detailed Description

```
template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
class std::wbuffer_convert< _Codecvt, _Elem, _Tr >
```

Buffer conversions.

Definition at line 321 of file locale\_conv.h.

### 5.1093.2 Member Typedef Documentation

#### 5.1093.2.1 \_\_streambuf\_type

```
typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _Elem , _Tr >::__streambuf_type
[inherited]
```

This is a non-standard type.

Definition at line 140 of file streambuf.

#### 5.1093.2.2 char\_type

```
typedef _Elem std::basic_streambuf< _Elem , _Tr >::char_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 131 of file streambuf.

#### 5.1093.2.3 int\_type

```
typedef traits_type::int_type std::basic_streambuf< _Elem , _Tr >::int_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 133 of file streambuf.

#### 5.1093.2.4 off\_type

```
typedef traits_type::off_type std::basic_streambuf< _Elem , _Tr >::off_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 135 of file streambuf.

#### 5.1093.2.5 pos\_type

```
typedef traits_type::pos_type std::basic_streambuf< _Elem , _Tr >::pos_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 134 of file streambuf.

#### 5.1093.2.6 traits\_type

```
typedef _Tr std::basic_streambuf< _Elem , _Tr >::traits_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 132 of file streambuf.

### 5.1093.3 Constructor & Destructor Documentation

#### 5.1093.3.1 wbuffer\_convert()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert (
    streambuf * __bytebuf = 0,
    _Codecvt * __pcvt = new _Codecvt,
    state_type __state = state_type() ) [inline], [explicit]
```

Default constructor.

##### Parameters

<code>__bytebuf</code>	The underlying byte stream buffer.
<code>__pcvt</code>	The facet to use for conversions.
<code>__state</code>	Initial conversion state.

Takes ownership of `__pcvt` and will delete it in the destructor.

Definition at line 337 of file `locale_conv.h`.

References `std::basic_streambuf<_Elem, _Tr>::setg()`, and `std::basic_streambuf<_Elem, _Tr>::setp()`.

#### 5.1093.4 Member Function Documentation

##### 5.1093.4.1 eback()

```
char_type* std::basic_streambuf<_Elem, _Tr>::eback ( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 489 of file `streambuf`.

##### 5.1093.4.2 egptr()

```
char_type* std::basic_streambuf<_Elem, _Tr>::egptr ( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 495 of file `streambuf`.

#### 5.1093.4.3 epptr()

```
char_type* std::basic_streambuf< _Elem , _Tr >::epptr ( ) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

#### 5.1093.4.4 gbump()

```
void std::basic_streambuf< _Elem , _Tr >::gbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the read position.

##### Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

Definition at line 505 of file streambuf.

#### 5.1093.4.5 getloc()

```
locale std::basic_streambuf< _Elem , _Tr >::getloc ( ) const [inline], [inherited]
```

Locale access.

##### Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file streambuf.

## 5.1093.4.6 gptr()

```
char_type* std::basic_streambuf<_Elem, _Tr>::gptr ( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

## 5.1093.4.7 imbue()

```
virtual void std::basic_streambuf<_Elem, _Tr>::imbue (
    const locale &__loc __attribute__((unused)) ) [inline], [protected], [virtual],
[inherited]
```

Changes translations.

## Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

## Note

Base class version does nothing.

Definition at line 583 of file streambuf.

## 5.1093.4.8 in\_avail()

```
streamsize std::basic_streambuf<_Elem, _Tr>::in_avail ( ) [inline], [inherited]
```

Looking ahead into the stream.

**Returns**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file `streambuf`.

**5.1093.4.9 overflow()**

```
virtual int_type std::basic_streambuf<_Elem, _Tr>::overflow (
    int_type __c __attribute__((unused)) = traits_type::eof() ) [inline], [protected],
[virtual], [inherited]
```

Consumes data from the buffer; writes to the controlled sequence.

**Parameters**

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

**Returns**

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note**

Base class version does nothing, returns `eof()`.

Definition at line 775 of file `streambuf`.

**5.1093.4.10 pbackfail()**

```
virtual int_type std::basic_streambuf<_Elem, _Tr>::pbackfail (
    int_type __c __attribute__((unused)) = traits_type::eof() ) [inline], [protected],
[virtual], [inherited]
```

Tries to back up the input sequence.

## Parameters

<code>_↵</code>	The character to be inserted back into the sequence.
<code>_C</code>	

## Returns

`eof()` on failure, *some other value* on success

## Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

## Note

Base class version does nothing, returns `eof()`.

Definition at line 731 of file `streambuf`.

## 5.1093.4.11 pbase()

```
char_type* std::basic_streambuf< _Elem , _Tr >::pbase ( ) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

## 5.1093.4.12 pbump()

```
void std::basic_streambuf< _Elem , _Tr >::pbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the write position.

**Parameters**

<code>_↵</code>	The delta by which to move.
<code>_n</code>	

This just advances the write position without returning any data.

Definition at line 552 of file streambuf.

**5.1093.4.13 pptr()**

```
char_type* std::basic_streambuf<_Elem, _Tr>::pptr ( ) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

**5.1093.4.14 pubimbue()**

```
locale std::basic_streambuf<_Elem, _Tr>::pubimbue (
    const locale & __loc ) [inline], [inherited]
```

Entry point for imbue().

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls the derived imbue(\_\_loc).

Definition at line 216 of file streambuf.

## 5.1093.4.15 pubseekoff()

```
pos_type std::basic_streambuf< _Elem , _Tr >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

## Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual seekoff function.

Definition at line 258 of file streambuf.

## 5.1093.4.16 pubseekpos()

```
pos_type std::basic_streambuf< _Elem , _Tr >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

## Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual seekpos function.

Definition at line 270 of file streambuf.

## 5.1093.4.17 pubsetbuf()

```
basic_streambuf* std::basic_streambuf< _Elem , _Tr >::pubsetbuf (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file streambuf.

**5.1093.4.18 pubsync()**

```
int std::basic_streambuf< _Elem , _Tr >::pubsync ( ) [inline], [inherited]
```

Calls virtual sync function.

Definition at line 278 of file streambuf.

**5.1093.4.19 sbumpc()**

```
int_type std::basic_streambuf< _Elem , _Tr >::sbumpc ( ) [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file streambuf.

**5.1093.4.20 seekoff()**

```
virtual pos_type std::basic_streambuf< _Elem , _Tr >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual],
[inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 609 of file streambuf.

#### 5.1093.4.21 `seekpos()`

```
virtual pos_type std::basic_streambuf<_Elem, _Tr>::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual],
[inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

##### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 621 of file `streambuf`.

#### 5.1093.4.22 `setbuf()`

```
virtual basic_streambuf<char_type, _Tr>* std::basic_streambuf<_Elem, _Tr>::setbuf (
    char_type * ,
    streamsize ) [inline], [protected], [virtual], [inherited]
```

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

##### Note

Base class version does nothing, returns `this`.

Definition at line 598 of file `streambuf`.

#### 5.1093.4.23 `setg()`

```
void std::basic_streambuf<_Elem, _Tr>::setg (
    char_type * __gbeg,
    char_type * __gnext,
    char_type * __gend ) [inline], [protected], [inherited]
```

Setting the three read area pointers.

**Parameters**

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

**Postcondition**

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file `streambuf`.

**5.1093.4.24 setp()**

```
void std::basic_streambuf<_Elem, _Tr>::setp (
    char_type * __pbeg,
    char_type * __pend) [inline], [protected], [inherited]
```

Setting the three write area pointers.

**Parameters**

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

**Postcondition**

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file `streambuf`.

**5.1093.4.25 sgetc()**

```
int_type std::basic_streambuf<_Elem, _Tr>::sgetc ( ) [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or `eof`.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

## 5.1093.4.26 sgetn()

```
streamsize std::basic_streambuf< _Elem , _Tr >::sgetn (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry point for xsgetn.

## Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

## 5.1093.4.27 showmanyc()

```
virtual streamsize std::basic_streambuf< _Elem , _Tr >::showmanyc ( ) [inline], [protected],
[virtual], [inherited]
```

Investigating the data available.

## Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1*

## Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Definition at line 656 of file `streambuf`.

**5.1093.4.28** `snextc()`

```
int_type std::basic_streambuf< _Elem , _Tr >::snextc ( ) [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

**5.1093.4.29** `sputbackc()`

```
int_type std::basic_streambuf< _Elem , _Tr >::sputbackc (
    char_type __c ) [inline], [inherited]
```

Pushing characters back into the input stream.

**Parameters**

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

**5.1093.4.30** `sputc()`

```
int_type std::basic_streambuf< _Elem , _Tr >::sputc (
    char_type __c ) [inline], [inherited]
```

Entry point for all single-character output functions.

## Parameters

<code>__c</code>	A character to output.
------------------	------------------------

## Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 431 of file `streambuf`.

## 5.1093.4.31 sputn()

```
streamsize std::basic_streambuf< _Elem , _Tr >::sputn (
    const char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry point for all single-character output functions.

## Parameters

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xputn(__s,__n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

## 5.1093.4.32 state()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
state_type std::wbuffer_convert< _Codecvt, _Elem, _Tr >::state ( ) const [inline], [noexcept]
```

The conversion state following the last conversion.

Definition at line 373 of file `locale_conv.h`.

### 5.1093.4.33 `sungetc()`

```
int_type std::basic_streambuf< _Elem , _Tr >::sungetc ( ) [inline], [inherited]
```

Moving backwards in the input stream.

#### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbckfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

### 5.1093.4.34 `sync()`

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
int std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync (
    void ) [inline], [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

#### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

#### Note

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf< _Elem, _Tr >`.

Definition at line 377 of file `locale_conv.h`.

References `std::basic_streambuf< _CharT, _Traits >::pubsync()`.

#### 5.1093.4.35 uflow()

```
virtual int_type std::basic_streambuf< _Elem , _Tr >::uflow ( ) [inline], [protected], [virtual],  
[inherited]
```

Fetches more data from the controlled sequence.

##### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Definition at line 707 of file `streambuf`.

#### 5.1093.4.36 underflow()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>  
_Wide_streambuf::int_type std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow ( ) [inline],  
[protected], [virtual]
```

Fetches more data from the controlled sequence.

##### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

##### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _Elem, _Tr >`.

Definition at line 391 of file `locale_conv.h`.

References `std::basic_streambuf< _Elem, _Tr >::egptr()`, and `std::basic_streambuf< _Elem, _Tr >::gptr()`.

#### 5.1093.4.37 xsgetn()

```
streamsize std::basic_streambuf< _Elem , _Tr >::xsgetn (   
    char_type * __s,  
    streamsize __n ) [protected], [virtual], [inherited]
```

Multiple character extraction.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Definition at line 46 of file `streambuf.tcc`.

**5.1093.4.38 xspn()**

```
streamsize std::basic_streambuf<_Elem, _Tr>::xspn (
    const char_type * __s,
    streamsize __n ) [protected], [virtual], [inherited]
```

Multiple character insertion.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Definition at line 80 of file `streambuf.tcc`.

**5.1093.5 Member Data Documentation**

#### 5.1093.5.1 \_M\_buf\_locale

`locale std::basic_streambuf<_Elem, _Tr>::_M_buf_locale` [protected], [inherited]

Current locale setting.

Definition at line 199 of file streambuf.

#### 5.1093.5.2 \_M\_in\_beg

`char_type* std::basic_streambuf<_Elem, _Tr>::_M_in_beg` [protected], [inherited]

Start of get area.

Definition at line 191 of file streambuf.

#### 5.1093.5.3 \_M\_in\_cur

`char_type* std::basic_streambuf<_Elem, _Tr>::_M_in_cur` [protected], [inherited]

Current read area.

Definition at line 192 of file streambuf.

#### 5.1093.5.4 \_M\_in\_end

`char_type* std::basic_streambuf<_Elem, _Tr>::_M_in_end` [protected], [inherited]

End of get area.

Definition at line 193 of file streambuf.

#### 5.1093.5.5 \_M\_out\_beg

`char_type* std::basic_streambuf<_Elem, _Tr>::_M_out_beg` [protected], [inherited]

Start of put area.

Definition at line 194 of file streambuf.

5.1093.5.6 `_M_out_cur`

```
char_type* std::basic_streambuf< _Elem , _Tr >::_M_out_cur [protected], [inherited]
```

Current put area.

Definition at line 195 of file `streambuf`.

5.1093.5.7 `_M_out_end`

```
char_type* std::basic_streambuf< _Elem , _Tr >::_M_out_end [protected], [inherited]
```

End of put area.

Definition at line 196 of file `streambuf`.

### 5.1095.1 Detailed Description

```
template<typename _RealType = double>
class std::weibull_distribution< _RealType >
```

A weibull\_distribution random number distribution.

The formula for the normal probability density function is:

$$p(x|\alpha, \beta) = \frac{\alpha}{\beta} \left(\frac{x}{\beta}\right)^{\alpha-1} \exp\left(-\left(\frac{x}{\beta}\right)^\alpha\right)$$

Definition at line 4758 of file random.h.

### 5.1095.2 Member Typedef Documentation

#### 5.1095.2.1 result\_type

```
template<typename _RealType = double>
typedef _RealType std::weibull_distribution< _RealType >::result_type
```

The type of the range of the distribution.

Definition at line 4761 of file random.h.

### 5.1095.3 Member Function Documentation

#### 5.1095.3.1 a()

```
template<typename _RealType = double>
_RealType std::weibull_distribution< _RealType >::a ( ) const [inline]
```

Return the *a* parameter of the distribution.

Definition at line 4821 of file random.h.

Referenced by `std::operator<<()`.

### 5.1095.3.2 `b()`

```
template<typename _RealType = double>
_RealType std::weibull_distribution<_RealType>::b ( ) const [inline]
```

Return the  $b$  parameter of the distribution.

Definition at line 4828 of file `random.h`.

Referenced by `std::operator<<()`.

### 5.1095.3.3 `max()`

```
template<typename _RealType = double>
result_type std::weibull_distribution<_RealType>::max ( ) const [inline]
```

Returns the least upper bound value of the distribution.

Definition at line 4857 of file `random.h`.

References `std::numeric_limits<_Tp>::max()`.

### 5.1095.3.4 `min()`

```
template<typename _RealType = double>
result_type std::weibull_distribution<_RealType>::min ( ) const [inline]
```

Returns the greatest lower bound value of the distribution.

Definition at line 4850 of file `random.h`.

### 5.1095.3.5 `operator()()`

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator >
result_type std::weibull_distribution<_RealType>::operator() (
    _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.

Definition at line 4865 of file `random.h`.

**5.1095.3.6** `param()` [1/2]

```
template<typename _RealType = double>
param_type std::weibull_distribution< _RealType >::param ( ) const [inline]
```

Returns the parameter set of the distribution.

Definition at line 4835 of file random.h.

Referenced by `std::operator>>()`.

**5.1095.3.7** `param()` [2/2]

```
template<typename _RealType = double>
void std::weibull_distribution< _RealType >::param (
    const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

**Parameters**

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

Definition at line 4843 of file random.h.

**5.1095.3.8** `reset()`

```
template<typename _RealType = double>
void std::weibull_distribution< _RealType >::reset ( ) [inline]
```

Resets the distribution state.

Definition at line 4814 of file random.h.

**5.1095.4 Friends And Related Function Documentation****5.1095.4.1** `operator==`

```
template<typename _RealType = double>
bool operator== (
    const weibull_distribution< _RealType > & __d1,
    const weibull_distribution< _RealType > & __d2 ) [friend]
```

Return true if two Weibull distributions have the same parameters.

Definition at line 4900 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

## 5.1097.1 Detailed Description

```
template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc =
allocator<char>>>
class std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >
```

String conversions.

Definition at line 169 of file locale\_conv.h.

## 5.1097.2 Constructor &amp; Destructor Documentation

5.1097.2.1 [wstring\\_convert](#)() [1/3]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>>
std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (
    _Codecvt * __pcvt = new _Codecvt() ) [inline], [explicit]
```

Default constructor.

**Parameters**

<code>__pcvt</code>	The facet to use for conversions.
---------------------	-----------------------------------

Takes ownership of `__pcvt` and will delete it in the destructor.

Definition at line 184 of file `locale_conv.h`.

**5.1097.2.2 wstring\_convert()** [2/3]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (
    _Codecvt * __pcvt,
    state_type __state ) [inline]
```

Construct with an initial conversion state.

**Parameters**

<code>__pcvt</code>	The facet to use for conversions.
<code>__state</code>	Initial conversion state.

Takes ownership of `__pcvt` and will delete it in the destructor. The object's conversion state will persist between conversions.

Definition at line 198 of file `locale_conv.h`.

**5.1097.2.3 wstring\_convert()** [3/3]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (
    const byte_string & __byte_err,
    const wide_string & __wide_err = wide_string() ) [inline], [explicit]
```

Construct with error strings.

**Parameters**

<code>__byte_err</code>	A string to return on failed conversions.
<code>__wide_err</code>	A wide string to return on failed conversions.

Definition at line 211 of file `locale_conv.h`.

### 5.1097.3 Member Function Documentation

#### 5.1097.3.1 converted()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>>
size_t std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::converted ( ) const
[inline], [noexcept]
```

The number of elements successfully converted in the last conversion.

Definition at line 301 of file locale\_conv.h.

#### 5.1097.3.2 from\_bytes() [1/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>>
wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes (
    char __byte ) [inline]
```

Convert from bytes.

Definition at line 230 of file locale\_conv.h.

Referenced by std::wstring\_convert< \_Codecvt, \_Elem, \_Wide\_alloc, \_Byte\_alloc >::from\_bytes().

#### 5.1097.3.3 from\_bytes() [2/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>>
wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes (
    const char * __ptr ) [inline]
```

Convert from bytes.

Definition at line 237 of file locale\_conv.h.

References std::wstring\_convert< \_Codecvt, \_Elem, \_Wide\_alloc, \_Byte\_alloc >::from\_bytes().

## 5.1097.3.4 from\_bytes() [3/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes (
    const byte_string & __str ) [inline]
```

Convert from bytes.

Definition at line 241 of file locale\_conv.h.

References std::basic\_string< \_CharT, \_Traits, \_Alloc >::data(), std::wstring\_convert< \_Codecvt, \_Elem, \_Wide\_alloc, \_Byte\_alloc >::from\_bytes(), and std::basic\_string< \_CharT, \_Traits, \_Alloc >::size().

## 5.1097.3.5 from\_bytes() [4/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes (
    const char * __first,
    const char * __last ) [inline]
```

Convert from bytes.

Definition at line 248 of file locale\_conv.h.

References std::basic\_string< \_CharT, \_Traits, \_Alloc >::get\_allocator().

## 5.1097.3.6 state()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
state_type std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::state ( ) const
[inline]
```

The final conversion state of the last conversion.

Definition at line 304 of file locale\_conv.h.

## 5.1097.3.7 to\_bytes() [1/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
byte_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes (
    _Elem __wchar ) [inline]
```

Convert to bytes.

Definition at line 264 of file locale\_conv.h.

Referenced by std::wstring\_convert< \_Codecvt, \_Elem, \_Wide\_alloc, \_Byte\_alloc >::to\_bytes().

**5.1097.3.8 to\_bytes()** [2/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
byte_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes (
    const _Elem * __ptr ) [inline]
```

Convert to bytes.

Definition at line 271 of file locale\_conv.h.

References `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes()`.

**5.1097.3.9 to\_bytes()** [3/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
byte_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes (
    const wide_string & __wstr ) [inline]
```

Convert to bytes.

Definition at line 277 of file locale\_conv.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::size()`, and `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes()`.

**5.1097.3.10 to\_bytes()** [4/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
byte_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes (
    const _Elem * __first,
    const _Elem * __last ) [inline]
```

Convert to bytes.

Definition at line 284 of file locale\_conv.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::get_allocator()`.

### 6.1.1 Detailed Description

Parallel STL function calls corresponding to the `stl_algo.h` header.

The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

_last)`

#### 6.6.1 Detailed Description

This is a TS C++ Library header.

## 6.6.2 Function Documentation

## 6.6.2.1 sample()

```
template<typename _PopulationIterator , typename _SampleIterator , typename _Distance , typename
_UniformRandomNumberGenerator >
_SampleIterator std::experimental::fundamentals_v2::sample (
    _PopulationIterator __first,
    _PopulationIterator __last,
    _SampleIterator __out,
    _Distance __n,
    _UniformRandomNumberGenerator && __g )
```

Take a random sample from a population.

### 6.7.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<algorithm>`.

## 6.8 `algorithmfwd.h` File Reference

### Namespaces

### 6.29.1 Detailed Description

Implementation of a dynamically load-balanced parallel quicksort.

It works in-place and needs only logarithmic extra memory. The algorithm is similar to the one proposed in

P. Tsigas and Y. Zhang. A simple, fast parallel implementation of quicksort and its performance evaluation on SUN enterprise 10000. In 11th Euromicro Conference on Parallel, Distributed and Network-Based Processing, page 372, 2003.

This file is a GNU parallel extension to the Standard C++ Library.

bool \_\_gnu\_cxx::operator== (const bitmap_allocator< _Tp1 > &, const bitmap_allocator< _Tp2 > &) throw ()`

### 6.43.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

### 6.43.2 Macro Definition Documentation

#### 6.43.2.1 [\\_BALLOC\\_ALIGN\\_BYTES](#)

```
#define \_BALLOC\_ALIGN\_BYTES
```

The constant in the expression below is the alignment required in bytes.

Definition at line 43 of file `bitmap_allocator.h`.

- `#define PB_DS_RANGED_HASH_FN_C_DEC`

## 6.60.1 Detailed Description

Contains an implementation class for `cc_ht_map_`.

## 6.61 ccomplex File Reference

## Macros

- `#define _GLIBCXX_CCOMPLEX`

## 6.61.1 Detailed Description

This is a Standard C++ Library header.

## 6.62 ccomplex File Reference

## Macros

- `#define _GLIBCXX_TR1_CCOMPLEX`

## 6.62.1 Detailed Description

This is a TR1 C++ Library header.

## 6.63 ctype File Reference

## Namespaces

- [std](#)

## Macros

- `#define _GLIBCXX_CCTYPE`

### 6.63.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `cctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.64 cctype File Reference

## Macros

- `#define _GLIBCXX_TR1_CCTYPE`

### 6.64.1 Detailed Description

This is a TR1 C++ Library header.

## 6.65 cerrno File Reference

## Macros

- `#define _GLIBCXX_CERRNO`
- `#define errno`

### 6.65.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `errno.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.66 cenv File Reference

## Macros

- `#define _GLIBCXX_CFENV`

### 6.66.1 Detailed Description

This is a Standard C++ Library header.

## 6.67 **cfenv File Reference**

### Macros

- `#define _GLIBCXX_TR1_CFENV`

### 6.67.1 Detailed Description

This is a TR1 C++ Library header.

## 6.68 **cfloat File Reference**

### Macros

- `#define _GLIBCXX_CFLOAT`
- `#define DECIMAL_DIG`
- `#define FLT_EVAL_METHOD`

### 6.68.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `float.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.69 **cfloat File Reference**

### Macros

- `#define _GLIBCXX_TR1_CFLOAT`

### 6.69.1 Detailed Description

This is a TR1 C++ Library header.

## 6.70 char\_traits.h File Reference

### Classes

### 6.72.1 Detailed Description

This is a Standard C++ Library header.

### 6.72.2 Typedef Documentation

#### 6.72.2.1 high\_resolution\_clock

```
using std::chrono::\_V2::high\_resolution\_clock = typedef system_clock
```

Highest-resolution clock.

This is the clock "with the shortest tick period." Alias to `std::system_clock` until higher-than-nanosecond definitions become feasible.

Definition at line 878 of file `chrono`.

## 6.73 chrono File Reference

### Namespaces

- [std](#)
- [std::chrono](#)

### Macros

- `#define \_GLIBCXX\_EXPERIMENTAL\_CHRONO`

### Variables

- `template<typename _Rep >`  
`constexpr bool std::chrono::experimental::fundamentals\_v1::treat\_as\_floating\_point\_v`

### 6.73.1 Detailed Description

This is a TS C++ Library header.

## 6.74 cinttypes File Reference

### Macros

- `#define \_GLIBCXX\_CINTTYPES`

#### 6.74.1 Detailed Description

This is a Standard C++ Library header.

## 6.75 cinttypes File Reference

### Macros

- `#define _GLIBCXX_TR1_CINTTYPES`

#### 6.75.1 Detailed Description

This is a TR1 C++ Library header.

## 6.76 ciso646 File Reference

#### 6.76.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `iso646.h`, which is empty in C++.

## 6.77 climits File Reference

### Macros

- `#define _GLIBCXX_CLIMITS`
- `#define LLONG_MAX`
- `#define LLONG_MIN`
- `#define ULLONG_MAX`

#### 6.77.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `limits.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.78 climits File Reference

### Macros

- `#define _GLIBCXX_TR1_CLIMITS`

### 6.78.1 Detailed Description

This is a TR1 C++ Library header.

## 6.79 clocale File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CLOCALE`

### 6.79.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `locale.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.80 cmath File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CMATH`
- `#define _GLIBCXX_INCLUDE_NEXT_C_HEADERS`

## Functions

### 6.80.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `math.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.81 cmath File Reference

### Namespaces

- [\\_\\_gnu\\_cxx](#)

### Macros

- `#define _EXT_CMATH`

#### 6.81.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

### 6.82.1 Detailed Description

This is a TR1 C++ Library header.

## 6.83 cmp\_fn\_imps.hpp File Reference

### 6.83.1 Detailed Description

Contains implementations of `cc_ht_map_`'s entire container comparison related functions.

## 6.84 codecvt File Reference

### Namespaces

- [std](#)

## Macros

- `#define _GLIBCXX_CODECVT`
- `#define _GLIBCXX_CODECVT_SPECIALIZATION(_NAME, _ELEM)`
- `#define _GLIBCXX_CODECVT_SPECIALIZATION2(_NAME, _ELEM)`

## Enumerations

- enum `codecvt_mode` { `consume_header`, `generate_header`, `little_endian` }

### 6.84.1 Detailed Description

This is a Standard C++ Library header.

## 6.85 `codecvt.h` File Reference

### Classes

- class `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`
- class `std::codecvt< _InternT, _ExternT, _StateT >`
- class `std::codecvt< char, char, mbstate_t >`
- class `std::codecvt< char16_t, char, mbstate_t >`
- class `std::codecvt< char32_t, char, mbstate_t >`
- class `std::codecvt< wchar_t, char, mbstate_t >`
- class `std::codecvt_base`
- class `std::codecvt_byname< _InternT, _ExternT, _StateT >`

### Namespaces

- `std`

### 6.85.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

## 6.86 `codecvt_specializations.h` File Reference

### Classes

- struct `__gnu_cxx::encoding_char_traits< _CharT >`
- class `__gnu_cxx::encoding_state`
- class `std::codecvt< _InternT, _ExternT, encoding_state >`

## Namespaces

- [\\_\\_gnu\\_cxx](#)
- [std](#)

## Functions

- `template<typename _Tp >  
size_t std::__iconv_adaptor (size_t(*__func)(iconv_t, _Tp, size_t *, char **, size_t *), iconv_t __cd, char **↵  
__inbuf, size_t *__inbytes, char **__outbuf, size_t *__outbytes)`

## 6.86.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

## 6.87 compatibility.h File Reference

## 6.87.1 Detailed Description

This is an internal header file, included by other library sources. You should not attempt to use it directly.

## 6.88 compatibility.h File Reference

## Namespaces

- [\\_\\_gnu\\_parallel](#)

## Functions

- `template<typename _Tp >  
_Tp __gnu_parallel::__add_omp (volatile _Tp *__ptr, _Tp __addend)`
- `template<typename _Tp >  
bool __gnu_parallel::__cas_omp (volatile _Tp *__ptr, _Tp __comparand, _Tp __replacement)`
- `template<typename _Tp >  
bool \_\_gnu\_parallel::\_\_compare\_and\_swap (volatile _Tp *__ptr, _Tp __comparand, _Tp __replacement)`
- `template<typename _Tp >  
_Tp \_\_gnu\_parallel::\_\_fetch\_and\_add (volatile _Tp *__ptr, _Tp __addend)`
- `void \_\_gnu\_parallel::\_\_yield ()`

## 6.88.1 Detailed Description

Compatibility layer, mostly concerned with atomic operations.

This file is a GNU parallel extension to the Standard C++ Library and contains implementation details for the library's internal use.

## 6.89 compiletime\_settings.h File Reference

### Macros

- `#define _GLIBCXX_CALL(__n)`
- `#define _GLIBCXX_PARALLEL_ASSERTIONS`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`
- `#define _GLIBCXX_SCALE_DOWN_FPU`
- `#define _GLIBCXX_VERBOSE_LEVEL`

### 6.89.1 Detailed Description

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

### 6.89.2 Macro Definition Documentation

#### 6.89.2.1 \_GLIBCXX\_CALL

```
#define _GLIBCXX_CALL(  
    __n )
```

Macro to produce log message when entering a function.

#### Parameters

<code>_↔</code>	Input size.
<code>_n</code>	

#### See also

`_GLIBCXX_VERBOSE_LEVEL`

Definition at line 44 of file `compiletime_settings.h`.

#### 6.89.2.2 \_GLIBCXX\_PARALLEL\_ASSERTIONS

```
#define _GLIBCXX_PARALLEL_ASSERTIONS
```

Switch on many `_GLIBCXX_PARALLEL_ASSERTIONS` in parallel code. Should be switched on only locally.

Definition at line 61 of file `compiletime_settings.h`.

### 6.89.2.3 `_GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`

```
#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1
```

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the L1 cache for `gnu_parallel::__parallel_random_shuffle()`.

Definition at line 68 of file `comPILEtime_settings.h`.

### 6.89.2.4 `_GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`

```
#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB
```

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the TLB for `gnu_parallel::__parallel_random_shuffle()`.

Definition at line 74 of file `comPILEtime_settings.h`.

### 6.89.2.5 `_GLIBCXX_SCALE_DOWN_FPU`

```
#define _GLIBCXX_SCALE_DOWN_FPU
```

Use floating-point scaling instead of modulo for mapping random numbers to a range. This can be faster on certain CPUs.

Definition at line 55 of file `comPILEtime_settings.h`.

### 6.89.2.6 `_GLIBCXX_VERBOSE_LEVEL`

```
#define _GLIBCXX_VERBOSE_LEVEL
```

Determine verbosity level of the parallel mode. Level 1 prints a message each time a parallel-mode function is entered.

Definition at line 37 of file `comPILEtime_settings.h`.

## 6.90 complex File Reference

### 6.90.1 Detailed Description

This is a Standard C++ Library header.

## 6.91 complex File Reference

### Namespaces

- [std](#)
- [std::tr1](#)

### Macros

- `#define _GLIBCXX_TR1_COMPLEX`

### Functions

- `template<typename _Tp >  
std::complex< _Tp > std::tr1::conj (const std::complex< _Tp > &__z)`
- `template<typename _Tp >  
std::complex< typename __gnu_cxx::__promote< _Tp >::__type > std::tr1::conj (_Tp __x)`
- `template<typename _Tp >  
std::complex< _Tp > std::tr1::fabs (const std::complex< _Tp > &__z)`
- `template<typename _Tp, typename _Up >  
std::complex< typename __gnu_cxx::__promote_2< _Tp, _Up >::__type > std::tr1::polar (const _Tp &__rho,  
const _Up &__theta)`
- `template<typename _Tp, typename _Up >  
std::complex< typename __gnu_cxx::__promote_2< _Tp, _Up >::__type > std::tr1::pow (const std::complex<  
_Tp > &__x, const _Up &__y)`
- `template<typename _Tp, typename _Up >  
std::complex< typename __gnu_cxx::__promote_2< _Tp, _Up >::__type > std::tr1::pow (const _Tp &__x, const std::complex<  
_Up > &__y)`
- `template<typename _Tp, typename _Up >  
std::complex< typename __gnu_cxx::__promote_2< _Tp, _Up >::__type > std::tr1::pow (const std::complex<  
_Tp > &__x, const std::complex< _Up > &__y)`
- `template<typename _Tp >  
std::complex< _Tp > std::tr1::pow (const std::complex< _Tp > &__x, const _Tp &__y)`
- `template<typename _Tp >  
std::complex< _Tp > std::tr1::pow (const _Tp &__x, const std::complex< _Tp > &__y)`
- `template<typename _Tp >  
std::complex< _Tp > std::tr1::pow (const std::complex< _Tp > &__x, const std::complex< _Tp > &__y)`

### 6.91.1 Detailed Description

This is a TR1 C++ Library header.

## 6.92 complex.h File Reference

### Macros

- `#define __GLIBCXX_COMPLEX_H`

#### 6.92.1 Detailed Description

This is a Standard C++ Library header.

## 6.93 concept\_check.h File Reference

### Macros

- `#define __glibcxx_class_requires(_a, _b)`
- `#define __glibcxx_class_requires2(_a, _b, _c)`
- `#define __glibcxx_class_requires3(_a, _b, _c, _d)`
- `#define __glibcxx_class_requires4(_a, _b, _c, _d, _e)`
- `#define __glibcxx_function_requires(...)`

#### 6.93.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iterator>`.

## 6.94 concurrence.h File Reference

### Classes

- class [`\_\_gnu\_cxx::\_\_scoped\_lock`](#)

### Namespaces

- [`\_\_gnu\_cxx`](#)

### Enumerations

- enum `_Lock_policy` { `_S_single`, `_S_mutex`, `_S_atomic` }

### Functions

- void `__gnu_cxx::__throw_concurrency_lock_error()`
- void `__gnu_cxx::__throw_concurrency_unlock_error()`

#### Variables

- static const `_Lock_policy` `__gnu_cxx::__default_lock_policy`

#### 6.94.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

### 6.95 `cond_dealtor.hpp` File Reference

#### Classes

- class `__gnu_pbds::detail::cond_dealtor< Entry, _Alloc >`

#### Namespaces

- `__gnu_pbds`

#### 6.95.1 Detailed Description

Contains a conditional deallocator.

### 6.96 `cond_key_dtor_entry_dealtor.hpp` File Reference

#### Classes

- class `__gnu_pbds::detail::cond_dealtor< Entry, _Alloc >`

#### Namespaces

- `__gnu_pbds`

#### 6.96.1 Detailed Description

Contains a conditional key destructor, used for exception handling.

### 6.97 `condition_variable` File Reference

#### Classes

- class `std::_V2::condition_variable_any`
- class `std::condition_variable`

## Namespaces

- [std](#)

## Macros

- `#define _GLIBCXX_CONDITION_VARIABLE`

## Enumerations

- enum [std::cv\\_status](#) { `no_timeout`, `timeout` }

## Functions

- void `std::notify_all_at_thread_exit` (`condition_variable &`, `unique_lock< mutex >`)

## 6.97.1 Detailed Description

This is a Standard C++ Library header.

6.98 `const_iterator.hpp` File Reference

## Classes

- class [\\_\\_gnu\\_pbds::detail::binary\\_heap\\_const\\_iterator\\_](#)< `Value_Type`, `Entry`, `Simple`, `_Alloc` >

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## Macros

- `#define PB_DS_BIN_HEAP_CIT_BASE`

## 6.98.1 Detailed Description

Contains an iterator class returned by the table's `const` find and insert methods.

## 6.99 `const_iterator.hpp` File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::left\\_child\\_next\\_sibling\\_heap\\_const\\_iterator\\_< Node, \\_Alloc >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- `#define PB_DS_BASIC_HEAP_CIT_BASE`
- `#define PB_DS_CLASS_C_DEC`

#### 6.99.1 Detailed Description

Contains an iterator class returned by the table's const find and insert methods.

## 6.100 `const_iterator.hpp` File Reference

### Classes

- class [const\\_iterator\\_](#)

#### 6.100.1 Detailed Description

Contains an iterator class used for const ranging over the elements of the table.

## 6.101 `constructor_destructor_fn_imps.hpp` File Reference

#### 6.101.1 Detailed Description

Contains implementations of `cc_ht_map_`'s constructors, destructor, and related functions.

## 6.102 `constructor_destructor_fn_imps.hpp` File Reference

#### 6.102.1 Detailed Description

Contains implementations of `gp_ht_map_`'s constructors, destructor, and related functions.

## 6.103 constructor\_destructor\_fn\_imps.hpp File Reference

## 6.104 constructor\_destructor\_no\_store\_hash\_fn\_imps.hpp File Reference

### 6.104.1 Detailed Description

Contains implementations of cc\_ht\_map\_'s constructors, destructor, and related functions.

## 6.105 constructor\_destructor\_no\_store\_hash\_fn\_imps.hpp File Reference

### 6.105.1 Detailed Description

Contains implementations of gp\_ht\_map\_'s constructors, destructor, and related functions.

## 6.106 constructor\_destructor\_store\_hash\_fn\_imps.hpp File Reference

### 6.106.1 Detailed Description

Contains implementations of cc\_ht\_map\_'s constructors, destructor, and related functions.

## 6.107 constructor\_destructor\_store\_hash\_fn\_imps.hpp File Reference

### 6.107.1 Detailed Description

Contains implementations of gp\_ht\_map\_'s constructors, destructor, and related functions.

## 6.108 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.108.1 Detailed Description

Contains an implementation class for binary\_heap\_.

## 6.109 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.109.1 Detailed Description

Contains an implementation for binomial\_heap\_.

## 6.110 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.110.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

## 6.111 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.111.1 Detailed Description

Contains an implementation class for bin\_search\_tree\_.

## 6.112 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.112.1 Detailed Description

Contains an implementation class for left\_child\_next\_sibling\_heap\_.

## 6.113 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.113.1 Detailed Description

Contains an implementation class for ov\_tree\_.

## 6.114 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.114.1 Detailed Description

Contains an implementation class for a pairing heap.

## 6.115 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.115.1 Detailed Description

Contains an implementation class for pat\_trie.

**6.116 constructors\_destructor\_fn\_imps.hpp File Reference****6.116.1 Detailed Description**

Contains an implementation for `rb_tree_`.

**6.117 constructors\_destructor\_fn\_imps.hpp File Reference****6.117.1 Detailed Description**

Contains an implementation for `rc_binomial_heap_`.

**6.118 constructors\_destructor\_fn\_imps.hpp File Reference****6.118.1 Detailed Description**

Contains an implementation class for `splay_tree_`.

**6.119 constructors\_destructor\_fn\_imps.hpp File Reference****6.119.1 Detailed Description**

Contains an implementation for `thin_heap_`.

**6.120 container\_base\_dispatch.hpp File Reference****Classes**

- [struct `\_\_gnu\_pbds::detail::container\_base\_dispatch< Key, Mapped, \_Alloc, cc\_hash\_tag, Policy\_TI >`](#)

- `#define PB_DS_V2F(X)`
- `#define PB_DS_V2F(X)`
- `#define PB_DS_V2S(X)`
- `#define PB_DS_V2S(X)`

### 6.120.1 Detailed Description

Contains associative container dispatching.

## 6.121 `cpp_type_traits.h` File Reference

## Namespaces

- [std](#)

## Macros

- `#define __INT_N(TYPE)`

## Functions

- `template<typename _Iterator >  
_Iterator std::__miter_base (_Iterator __it)`

### 6.121.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/type_traits>`.

## 6.122 `cpu_defines.h` File Reference

### 6.122.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iosfwd>`.

## 6.123 `csetjmp` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSETJMP`
- `#define setjmp(env)`

### 6.123.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `setjmp.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.124 `csignal` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSIGNAL`

### 6.124.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `signal.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.125 cstdalign File Reference

### Macros

- `#define _GLIBCXX_CSTDALIGN`

### 6.125.1 Detailed Description

This is a Standard C++ Library header.

## 6.126 cstdarg File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSTDARG`
- `#define va_end(ap)`

### 6.126.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdarg.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.127 cstdarg File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDARG`

### 6.127.1 Detailed Description

This is a TR1 C++ Library header.

## 6.128 `cstdbool` File Reference

### Macros

- `#define _GLIBCXX_CSTDBOOL`

#### 6.128.1 Detailed Description

This is a Standard C++ Library header.

## 6.129 `cstdbool` File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDBOOL`

#### 6.129.1 Detailed Description

This is a TR1 C++ Library header.

## 6.130 `cstddef` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSTDDEF`

#### 6.130.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stddef.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.131 `cstdint` File Reference

### Namespaces

- [std](#)

#### Macros

- `#define _GLIBCXX_CSTDINT`

##### 6.131.1 Detailed Description

This is a Standard C++ Library header.

#### 6.132 cstdint File Reference

#### Namespaces

- [std](#)
- [std::tr1](#)

#### Macros

- `#define _GLIBCXX_TR1_CSTDINT`

##### 6.132.1 Detailed Description

This is a TR1 C++ Library header.

#### 6.133 cstdio File Reference

#### Namespaces

- [std](#)

#### Macros

- `#define _GLIBCXX_CSTDIO`

##### 6.133.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdio.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.134 `cstdio` File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDIO`

### 6.134.1 Detailed Description

This is a TR1 C++ Library header.

## 6.135 `cstdlib` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSTDLIB`
- `#define EXIT_FAILURE`
- `#define EXIT_SUCCESS`

### Functions

- void **std::abort** (void) throw ()
- int **std::atexit** (void(\*)(void)) throw ()
- void **std::exit** (int) throw ()

### 6.135.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdlib.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.136 `cstdlib` File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDLIB`

#### 6.136.1 Detailed Description

This is a TR1 C++ Library header.

### 6.137 cstring File Reference

#### Namespaces

- [std](#)

#### Macros

- `#define _GLIBCXX_CSTRING`

#### Functions

- `void * std::memchr (void *__s, int __c, size_t __n)`
- `char * std::strchr (char *__s, int __n)`
- `char * std::strpbrk (char *__s1, const char *__s2)`
- `char * std::strrchr (char *__s, int __n)`
- `char * std::strstr (char *__s1, const char *__s2)`

#### 6.137.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `string.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

### 6.138 ctgmath File Reference

#### Macros

- `#define _GLIBCXX_CTGMATH`

#### 6.138.1 Detailed Description

This is a Standard C++ Library header.

## 6.139 ctgmath File Reference

### Macros

- `#define _GLIBCXX_TR1_CTGMATH`

#### 6.139.1 Detailed Description

This is a TR1 C++ Library header.

## 6.140 ctime File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CTIME`

#### 6.140.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `time.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

## 6.141 ctime File Reference

### Macros

- `#define _GLIBCXX_TR1_CTIME`

#### 6.141.1 Detailed Description

This is a TR1 C++ Library header.

## 6.142 ctype\_base.h File Reference

### Classes

- struct [std::ctype\\_base](#)

#### Namespaces

- [std](#)

##### 6.142.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

#### 6.143 `ctype_inline.h` File Reference

#### Namespaces

- [std](#)

##### 6.143.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

#### 6.144 `cuchar` File Reference

#### Macros

- `#define _GLIBCXX_CCHAR`

##### 6.144.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `uchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

#### 6.145 `wchar` File Reference

#### Namespaces

- [std](#)

#### Macros

- `#define _GLIBCXX_WCHAR`

## Functions

- `wchar_t * std::wcschr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wcsbrk` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wcsrchr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wcsstr` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wmemchr` (`wchar_t *__p`, `wchar_t __c`, `size_t __n`)

## 6.145.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.146 `cwchar` File Reference

## Namespaces

- [std](#)
- [std::tr1](#)

## Macros

- `#define _GLIBCXX_TR1_CWCHAR`

## 6.146.1 Detailed Description

This is a TR1 C++ Library header.

6.147 `cwctype` File Reference

## Namespaces

- [std](#)

## Macros

- `#define _GLIBCXX_CWCTYPE`

#### 6.147.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

### 6.148 `cwctype` File Reference

#### Namespaces

- [std](#)
- [std::tr1](#)

#### Macros

- `#define _GLIBCXX_TR1_CWCTYPE`

#### 6.148.1 Detailed Description

This is a TR1 C++ Library header.

### 6.149 `cxxabi.h` File Reference

#### Classes

- class [\\_\\_gnu\\_cxx::recursive\\_init\\_error](#)

#### Namespaces

- [\\_\\_gnu\\_cxx](#)
- [abi](#)

#### Typedefs

- typedef `__cxa_cdtor_return_type(* __cxxabiv1::__cxa_cdtor_type) (void *)`

## Functions

### 6.149.1 Detailed Description

The header provides an interface to the C++ ABI.

### 6.149.2 Function Documentation

#### 6.149.2.1 `__cxa_demangle()`

```
char* __cxxabiv1::__cxa_demangle (
    const char * __mangled_name,
    char * __output_buffer,
    size_t * __length,
    int * __status )
```

Demangling routine. ABI-mandated entry point in the C++ runtime library for demangling.

#### Parameters

<code>__mangled_name</code>	A NUL-terminated character string containing the name to be demangled.
<code>__output_buffer</code>	A region of memory, allocated with <code>malloc</code> , of <code>*__length</code> bytes, into which the demangled name is stored. If <code>__output_buffer</code> is not long enough, it is expanded using <code>realloc</code> . <code>__output_buffer</code> may instead be <code>NULL</code> ; in that case, the demangled name is placed in a region of memory allocated with <code>malloc</code> .
<code>__length</code>	If <code>__length</code> is non- <code>NULL</code> , the length of the buffer containing the demangled name is placed in <code>*__length</code> .
<code>__status</code>	<code>*__status</code> is set to one of the following values: 0: The demangling operation succeeded. -1: A memory allocation failure occurred. -2: <code>mangled_name</code> is not a valid name under the C++ ABI mangling rules. -3: One of the arguments is invalid.

#### Returns

A pointer to the start of the NUL-terminated demangled name, or `NULL` if the demangling fails. The caller is responsible for deallocating this memory using `free`.

The demangling is performed using the C++ ABI mangling rules, with GNU extensions. For example, this function is used in `__gnu_cxx::__verbose_terminate_handler`.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext\\_demangling.html](https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_demangling.html) for other examples of use.

#### Note

The same demangling functionality is available via `libiberty` (`<libiberty/demangle.h>` and `libiberty`.↵a) in GCC 3.1 and later, but that requires explicit installation (`-enable-install-libiberty`) and uses a different API, although the ABI is unchanged.

## 6.150 `cxxabi_forced.h` File Reference

### Classes

- class [\\_\\_cxxabiv1::\\_\\_forced\\_unwind](#)

#### 6.150.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<cxxabi.h>`.

## 6.151 `cxxabi_init_exception.h` File Reference

### Namespaces

#### 6.154.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

## 6.155 debug\_fn\_imps.hpp File Reference

#### 6.155.1 Detailed Description

Contains an implementation class for a binary\_heap.

## 6.156 debug\_fn\_imps.hpp File Reference

#### 6.156.1 Detailed Description

Contains an implementation for binomial\_heap\_.

## 6.157 debug\_fn\_imps.hpp File Reference

#### 6.157.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

## 6.158 `debug_fn_imps.hpp` File Reference

### 6.158.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

## 6.159 `debug_fn_imps.hpp` File Reference

### 6.159.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

## 6.160 `debug_fn_imps.hpp` File Reference

### 6.160.1 Detailed Description

Contains implementations of `gp_ht_map_`'s debug-mode functions.

## 6.161 `debug_fn_imps.hpp` File Reference

### 6.161.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

## 6.162 `debug_fn_imps.hpp` File Reference

### 6.162.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

## 6.163 `debug_fn_imps.hpp` File Reference

### 6.163.1 Detailed Description

Contains an implementation class for `ov_tree_`.

## 6.164 `debug_fn_imps.hpp` File Reference

### 6.164.1 Detailed Description

Contains an implementation class for a pairing heap.

## 6.165 `debug_fn_imps.hpp` File Reference

### 6.165.1 Detailed Description

Contains an implementation class for `pat_trie_`.

## 6.166 `debug_fn_imps.hpp` File Reference

### 6.166.1 Detailed Description

Contains an implementation for `rb_tree_`.

## 6.167 `debug_fn_imps.hpp` File Reference

### 6.167.1 Detailed Description

Contains an implementation for `rc_binomial_heap_`.

## 6.168 `debug_fn_imps.hpp` File Reference

### 6.168.1 Detailed Description

Contains an implementation class for `splay_tree_`.

## 6.169 `debug_fn_imps.hpp` File Reference

### 6.169.1 Detailed Description

Contains an implementation for `thin_heap_`.

## 6.170 `debug_map_base.hpp` File Reference

### 6.170.1 Detailed Description

Contains a debug-mode base for all maps.

## 6.171 `debug_no_store_hash_fn_imps.hpp` File Reference

### 6.171.1 Detailed Description

Contains implementations of `cc_ht_map_'s` debug-mode functions.

## 6.172 `debug_no_store_hash_fn_imps.hpp` File Reference

### 6.172.1 Detailed Description

Contains implementations of `gp_ht_map_'s` debug-mode functions.

## 6.173 `debug_store_hash_fn_imps.hpp` File Reference

### 6.173.1 Detailed Description

Contains implementations of `cc_ht_map_'s` debug-mode functions.

## 6.174 `debug_store_hash_fn_imps.hpp` File Reference

### 6.174.1 Detailed Description

Contains implementations of `gp_ht_map_'s` debug-mode functions.

## 6.175 `decimal` File Reference

### 6.185.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly.

## 6.186 enc\_filebuf.h File Reference

### Classes

- `class __gnu_cxx::enc_filebuf< _CharT >`

### Namespaces

- `__gnu_cxx`

#### 6.186.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

### 6.187 `entry_cmp.hpp` File Reference

#### Classes

- [struct `\_\_gnu\_pbds::detail::entry\_cmp<\_VTp, Cmp\_Fn, \_Alloc, No\_Throw >`](#)
- [struct `\_\_gnu\_pbds::detail::entry\_cmp<\_VTp, Cmp\_Fn, \_Alloc, false >`](#)
- [struct `\_\_gnu\_pbds::detail::entry\_cmp<\_VTp, Cmp\_Fn, \_Alloc, false >::type`](#)
- [struct `\_\_gnu\_pbds::detail::entry\_cmp<\_VTp, Cmp\_Fn, \_Alloc, true >`](#)

#### Namespaces

- [\\_\\_gnu\\_pbds](#)

#### 6.187.1 Detailed Description

Contains an implementation class for a `binary_heap`.

### 6.188 `entry_list_fn_imps.hpp` File Reference

#### 6.188.1 Detailed Description

Contains implementations of `cc_ht_map_`'s entry-list related functions.

### 6.189 `entry_metadata_base.hpp` File Reference

#### Namespaces

- [\\_\\_gnu\\_pbds](#)

#### 6.189.1 Detailed Description

Contains an implementation for a list update map.

## 6.190 entry\_pred.hpp File Reference

### Classes

- struct [\\_\\_gnu\\_pbds::detail::entry\\_pred< \\_VTp, Pred, \\_Alloc, No\\_Throw >](#)
- struct [\\_\\_gnu\\_pbds::detail::entry\\_pred< \\_VTp, Pred, \\_Alloc, false >](#)
- struct [\\_\\_gnu\\_pbds::detail::entry\\_pred< \\_VTp, Pred, \\_Alloc, true >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

#### 6.190.1 Detailed Description

Contains an implementation class for a binary\_heap.

## 6.191 eq\_by\_less.hpp File Reference

### Classes

- struct [\\_\\_gnu\\_pbds::detail::eq\\_by\\_less< Key, Cmp\\_Fn >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

#### 6.191.1 Detailed Description

Contains an equivalence function.

## 6.192 equally\_split.h File Reference

### Namespaces

- [\\_\\_gnu\\_parallel](#)

### Functions

- template<typename \_DifferenceType , typename \_OutputIterator >  
\_OutputIterator [\\_\\_gnu\\_parallel::\\_\\_equally\\_split](#) (\_DifferenceType \_\_n, \_ThreadIndex \_\_num\_threads, \_OutputIterator \_\_s)
- template<typename \_DifferenceType >  
\_DifferenceType [\\_\\_gnu\\_parallel::\\_\\_equally\\_split\\_point](#) (\_DifferenceType \_\_n, \_ThreadIndex \_\_num\_threads, \_ThreadIndex \_\_thread\_no)

#### 6.192.1 Detailed Description

This file is a GNU parallel extension to the Standard C++ Library.

### 6.193 `erase_fn_imps.hpp` File Reference

#### 6.193.1 Detailed Description

Contains an implementation class for a `binary_heap`.

### 6.194 `erase_fn_imps.hpp` File Reference

#### 6.194.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

### 6.195 `erase_fn_imps.hpp` File Reference

#### 6.195.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

### 6.196 `erase_fn_imps.hpp` File Reference

#### 6.196.1 Detailed Description

Contains implementations of `cc_ht_map_`'s erase related functions.

### 6.197 `erase_fn_imps.hpp` File Reference

#### 6.197.1 Detailed Description

Contains implementations of `gp_ht_map_`'s erase related functions.

### 6.198 `erase_fn_imps.hpp` File Reference

#### 6.198.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

## 6.199 erase\_fn\_imps.hpp File Reference

### 6.199.1 Detailed Description

Contains implementations of lu\_map\_.

## 6.200 erase\_fn\_imps.hpp File Reference

### 6.200.1 Detailed Description

Contains an implementation class for ov\_tree\_.

## 6.201 erase\_fn\_imps.hpp File Reference

### 6.201.1 Detailed Description

Contains an implementation class for a pairing heap.

## 6.202 erase\_fn\_imps.hpp File Reference

### 6.202.1 Detailed Description

Contains an implementation class for pat\_trie.

## 6.203 erase\_fn\_imps.hpp File Reference

### 6.203.1 Detailed Description

Contains an implementation for rb\_tree\_.

## 6.204 erase\_fn\_imps.hpp File Reference

### 6.204.1 Detailed Description

Contains an implementation for rc\_binomial\_heap\_.

## 6.205 `erase_fn_imps.hpp` File Reference

### 6.205.1 Detailed Description

Contains an implementation class for `splay_tree_`.

## 6.206 `erase_fn_imps.hpp` File Reference

### 6.206.1 Detailed Description

Contains an implementation for `thin_heap_`.

## 6.207 `erase_if.h` File Reference

- `#define \_GLIBCXX\_TREE\_DYNAMIC\_BALANCING`
- `#define \_GLIBCXX\_TREE\_FULL\_COPY`
- `#define \_GLIBCXX\_TREE\_INITIAL\_SPLITTING`

### 6.220.1 Detailed Description

Defines on whether to include algorithm variants.

Less variants reduce executable size and compile time. This file is a GNU parallel extension to the Standard C++ Library.

### 6.220.2 Macro Definition Documentation

#### 6.220.2.1 `_GLIBCXX_BAL_QUICKSORT`

```
#define _GLIBCXX_BAL_QUICKSORT
```

Include parallel dynamically load-balanced quicksort.

See also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 55 of file features.h.

#### 6.220.2.2 `_GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS`

```
#define _GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS
```

Include the equal-sized blocks variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 67 of file features.h.

#### 6.220.2.3 `_GLIBCXX_FIND_EQUAL_SPLIT`

```
#define _GLIBCXX_FIND_EQUAL_SPLIT
```

Include the equal splitting variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 74 of file features.h.

#### 6.220.2.4 `_GLIBCXX_FIND_GROWING_BLOCKS`

```
#define _GLIBCXX_FIND_GROWING_BLOCKS
```

Include the growing blocks variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 61 of file features.h.

#### 6.220.2.5 \_GLIBCXX\_MERGESORT

```
#define _GLIBCXX_MERGESORT
```

Include parallel multi-way mergesort.

See also

`__gnu_parallel::Settings::sort_algorithm`

Definition at line 41 of file features.h.

#### 6.220.2.6 \_GLIBCXX\_QUICKSORT

```
#define _GLIBCXX_QUICKSORT
```

Include parallel unbalanced quicksort.

See also

`__gnu_parallel::Settings::sort_algorithm`

Definition at line 48 of file features.h.

#### 6.220.2.7 \_GLIBCXX\_TREE\_DYNAMIC\_BALANCING

```
#define _GLIBCXX_TREE_DYNAMIC_BALANCING
```

Include the dynamic balancing variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 91 of file features.h.

#### 6.220.2.8 \_GLIBCXX\_TREE\_FULL\_COPY

```
#define _GLIBCXX_TREE_FULL_COPY
```

In order to sort the input sequence of `_Rb_tree::insert_unique(_Iter beg, _Iter __end)` a full copy of the input elements is done.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 100 of file features.h.

### 6.220.2.9 `_GLIBCXX_TREE_INITIAL_SPLITTING`

```
#define _GLIBCXX_TREE_INITIAL_SPLITTING
```

Include the initial splitting variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 83 of file `features.h`.

## 6.221 `fenv.h` File Reference

### 6.221.1 Detailed Description

This is a Standard C++ Library header.

## 6.222 `filesystem` File Reference

Macros

- `#define __cpp_lib_experimental_filesystem`
- `#define _GLIBCXX_EXPERIMENTAL_FILESYSTEM`

### 6.222.1 Detailed Description

This is a TS C++ Library header.

## 6.223 `find.h` File Reference

`std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, constant_size_blocks_tag)`

#### 6.223.1 Detailed Description

Parallel implementation base for `std::find()`, `std::equal()` and related functions. This file is a GNU parallel extension to the Standard C++ Library.

### 6.224 find\_fn\_imps.hpp File Reference

#### 6.224.1 Detailed Description

Contains an implementation class for a `binary_heap`.

### 6.225 find\_fn\_imps.hpp File Reference

#### 6.225.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

### 6.226 find\_fn\_imps.hpp File Reference

#### 6.226.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

### 6.227 find\_fn\_imps.hpp File Reference

#### 6.227.1 Detailed Description

Contains implementations of `cc_ht_map_`'s find related functions.

### 6.228 find\_fn\_imps.hpp File Reference

#### 6.228.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions.

### 6.229 find\_fn\_imps.hpp File Reference

#### 6.229.1 Detailed Description

Contains implementations of `lu_map_`.

## 6.230 `find_fn_imps.hpp` File Reference

### 6.230.1 Detailed Description

Contains an implementation class for a pairing heap.

## 6.231 `find_fn_imps.hpp` File Reference

### 6.231.1 Detailed Description

Contains an implementation class for `pat_trie`.

## 6.232 `find_fn_imps.hpp` File Reference

### 6.232.1 Detailed Description

Contains an implementation for `rb_tree_`.

## 6.233 `find_fn_imps.hpp` File Reference

### 6.233.1 Detailed Description

Contains an implementation class for `splay_tree_`.

## 6.234 `find_fn_imps.hpp` File Reference

### 6.234.1 Detailed Description

Contains an implementation for `thin_heap_`.

## 6.235 `find_no_store_hash_fn_imps.hpp` File Reference

### 6.235.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions, when the hash value is not stored.

## 6.236 find\_selectors.h File Reference

## 6.253.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<experimental/filesystem>`.

## 6.253.2 Function Documentation

#### 6.253.2.1 hash\_value()

```
size_t std::experimental::filesystem::v1::hash_value (
    const path & __p ) [noexcept]
```

Compare paths.

#### 6.253.2.2 operator!=(())

```
bool std::experimental::filesystem::v1::operator!= (
    const path & __lhs,
    const path & __rhs ) [inline], [noexcept]
```

Compare paths.

Definition at line 512 of file experimental/bits/fs\_path.h.

#### 6.253.2.3 operator/()

```
path std::experimental::filesystem::v1::operator/ (
    const path & __lhs,
    const path & __rhs ) [inline]
```

Append one path to another.

Definition at line 516 of file experimental/bits/fs\_path.h.

#### 6.253.2.4 operator<()

```
bool std::experimental::filesystem::v1::operator< (
    const path & __lhs,
    const path & __rhs ) [inline], [noexcept]
```

Compare paths.

Definition at line 492 of file experimental/bits/fs\_path.h.

#### 6.253.2.5 operator<<()

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>& std::experimental::filesystem::v1::operator<< (
    basic_ostream< _CharT, _Traits > & __os,
    const path & __p )
```

Write a path to a stream.

Definition at line 526 of file experimental/bits/fs\_path.h.

#### 6.253.2.6 operator<=()

```
bool std::experimental::filesystem::v1::operator<= (
    const path & __lhs,
    const path & __rhs ) [inline], [noexcept]
```

Compare paths.

Definition at line 496 of file experimental/bits/fs\_path.h.

#### 6.253.2.7 operator==()

```
bool std::experimental::filesystem::v1::operator== (
    const path & __lhs,
    const path & __rhs ) [inline], [noexcept]
```

Compare paths.

Definition at line 508 of file experimental/bits/fs\_path.h.

#### 6.253.2.8 operator>()

```
bool std::experimental::filesystem::v1::operator> (
    const path & __lhs,
    const path & __rhs ) [inline], [noexcept]
```

Compare paths.

Definition at line 500 of file experimental/bits/fs\_path.h.

#### 6.253.2.9 operator>=()

```
bool std::experimental::filesystem::v1::operator>= (
    const path & __lhs,
    const path & __rhs ) [inline], [noexcept]
```

Compare paths.

Definition at line 504 of file experimental/bits/fs\_path.h.

**6.253.2.10 operator>>()**

```
template<typename _CharT , typename _Traits >
basic_istream<_CharT, _Traits>& std::experimental::filesystem::v1::operator>> (
    basic_istream< _CharT, _Traits > & __is,
    path & __p )
```

Read a path from a stream.

Definition at line 538 of file experimental/bits/fs\_path.h.

**6.253.2.11 swap()**

```
void std::experimental::filesystem::v1::swap (
    path & __lhs,
    path & __rhs ) [inline], [noexcept]
```

Compare paths.

Definition at line 487 of file experimental/bits/fs\_path.h.

**6.253.2.12 u8path()** [1/2]

```
template<typename _Source >
path std::experimental::filesystem::v1::u8path (
    const _Source & __source ) [inline]
```

Compare paths.

Definition at line 551 of file experimental/bits/fs\_path.h.

References std::experimental::filesystem::v1::u8path().

Referenced by std::experimental::filesystem::v1::u8path().

**6.253.2.13 u8path()** [2/2]

```
template<typename _InputIterator >
path std::experimental::filesystem::v1::u8path (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Compare paths.

Definition at line 563 of file experimental/bits/fs\_path.h.

References std::experimental::filesystem::v1::u8path().

- `template<typename _Tp>`  
`constexpr int std::experimental::fundamentals\_v1::is\_placeholder\_v`

### 6.259.1 Detailed Description

This is a TS C++ Library header.

### 6.259.2 Function Documentation

#### 6.259.2.1 make\_boyer\_moore\_horspool\_searcher()

```
template<typename _RAIter , typename _Hash = std::hash<typename std::iterator_traits<_RAIter>↵
::value_type>, typename _BinaryPredicate = equal_to<>>
boyer_moore_horspool_searcher<_RAIter, _Hash, _BinaryPredicate> std::experimental::fundamentals↵
_v1::make_boyer_moore_horspool_searcher (
    _RAIter __pat_first,
    _RAIter __pat_last,
    _Hash __hf = _Hash(),
    _BinaryPredicate __pred = _BinaryPredicate() ) [inline]
```

Generator function for boyer\_moore\_horspool\_searcher.

Definition at line 302 of file experimental/functional.

#### 6.259.2.2 make\_boyer\_moore\_searcher()

```
template<typename _RAIter , typename _Hash = std::hash<typename std::iterator_traits<_RAIter>↵
::value_type>, typename _BinaryPredicate = equal_to<>>
boyer_moore_searcher<_RAIter, _Hash, _BinaryPredicate> std::experimental::fundamentals_v1::make↵
_boyer_moore_searcher (
    _RAIter __pat_first,
    _RAIter __pat_last,
    _Hash __hf = _Hash(),
    _BinaryPredicate __pred = _BinaryPredicate() ) [inline]
```

Generator function for boyer\_moore\_searcher.

Definition at line 292 of file experimental/functional.

#### 6.259.2.3 make\_default\_searcher()

```
template<typename _ForwardIterator , typename _BinaryPredicate = std::equal_to<>>
default_searcher<_ForwardIterator, _BinaryPredicate> std::experimental::fundamentals_v1::make_↵
default_searcher (
    _ForwardIterator __pat_first,
    _ForwardIterator __pat_last,
    _BinaryPredicate __pred = _BinaryPredicate() ) [inline]
```

Generator function for default\_searcher.

Definition at line 282 of file experimental/functional.

#### 6.259.2.4 not\_fn()

```
template<typename _Fn >
auto std::experimental::fundamentals_v2::not_fn (
    _Fn && __fn ) [inline], [noexcept]
```

[func.not\_fn] Function template not\_fn

Definition at line 371 of file experimental/functional.

### 6.259.3 Variable Documentation

#### 6.259.3.1 is\_bind\_expression\_v

```
template<typename _Tp >
constexpr bool std::experimental::fundamentals_v1::is_bind_expression_v
```

Variable template for std::is\_bind\_expression.

Definition at line 60 of file experimental/functional.

#### 6.259.3.2 is\_placeholder\_v

```
template<typename _Tp >
constexpr int std::experimental::fundamentals_v1::is_placeholder_v
```

Variable template for std::is\_placeholder.

Definition at line 64 of file experimental/functional.

## 6.280.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

## 6.281 indirect\_array.h File Reference

## Classes

- class [std::indirect\\_array< \\_Tp >](#)

## Namespaces

- [std](#)

## Macros

- `#define DEFINE_VALARRAY_OPERATOR(_Op, _Name)`

#### 6.281.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

### 6.282 info\_fn\_imps.hpp File Reference

#### 6.282.1 Detailed Description

Contains an implementation class for a `binary_heap`.

### 6.283 info\_fn\_imps.hpp File Reference

#### 6.283.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

### 6.284 info\_fn\_imps.hpp File Reference

#### 6.284.1 Detailed Description

Contains implementations of `cc_ht_map_`'s entire container info related functions.

### 6.285 info\_fn\_imps.hpp File Reference

#### 6.285.1 Detailed Description

Contains implementations of `gp_ht_map_`'s entire container info related functions.

### 6.286 info\_fn\_imps.hpp File Reference

#### 6.286.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

### 6.287 info\_fn\_imps.hpp File Reference

#### 6.287.1 Detailed Description

Contains implementations of `lu_map_`.

## 6.288 info\_fn\_imps.hpp File Reference

### 6.288.1 Detailed Description

Contains an implementation class for ov\_tree\_.

## 6.289 info\_fn\_imps.hpp File Reference

### 6.289.1 Detailed Description

Contains an implementation class for pat\_trie.

## 6.290 info\_fn\_imps.hpp File Reference

### 6.290.1 Detailed Description

Contains an implementation for rb\_tree\_.

## 6.291 info\_fn\_imps.hpp File Reference

### 6.291.1 Detailed Description

Contains an implementation.

## 6.292 initializer\_list File Reference

### Classes

- class [std::initializer\\_list<\\_E>](#)

### Namespaces

- [std](#)

### Functions

- [template<class \\_Tp>](#)  
constexpr const \_Tp \* [std::begin](#) (initializer\_list<\_Tp> \_\_ils) noexcept
- [template<class \\_Tp>](#)  
constexpr const \_Tp \* [std::end](#) (initializer\_list<\_Tp> \_\_ils) noexcept

#### 6.292.1 Detailed Description

This is a Standard C++ Library header.

### 6.293 `insert_fn_imps.hpp` File Reference

#### 6.293.1 Detailed Description

Contains an implementation class for a `binary_heap`.

### 6.294 `insert_fn_imps.hpp` File Reference

#### 6.294.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

### 6.295 `insert_fn_imps.hpp` File Reference

#### 6.295.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

### 6.296 `insert_fn_imps.hpp` File Reference

#### 6.296.1 Detailed Description

Contains implementations of `cc_ht_map_`'s insert related functions.

### 6.297 `insert_fn_imps.hpp` File Reference

#### 6.297.1 Detailed Description

Contains implementations of `gp_ht_map_`'s insert related functions.

### 6.298 `insert_fn_imps.hpp` File Reference

#### 6.298.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

## 6.299 insert\_fn\_imps.hpp File Reference

### 6.299.1 Detailed Description

Contains implementations of lu\_map\_.

## 6.300 insert\_fn\_imps.hpp File Reference

### 6.300.1 Detailed Description

Contains an implementation class for ov\_tree\_.

## 6.301 insert\_fn\_imps.hpp File Reference

### 6.301.1 Detailed Description

Contains an implementation class for a pairing heap.

## 6.302 insert\_fn\_imps.hpp File Reference

### 6.302.1 Detailed Description

Contains an implementation for rb\_tree\_.

## 6.303 insert\_fn\_imps.hpp File Reference

### 6.303.1 Detailed Description

Contains an implementation for rc\_binomial\_heap\_.

## 6.304 insert\_fn\_imps.hpp File Reference

### 6.304.1 Detailed Description

Contains an implementation class for splay\_tree\_.

### 6.305 `insert_fn_imps.hpp` File Reference

#### 6.305.1 Detailed Description

Contains an implementation for `thin_heap_`.

### 6.306 `insert_join_fn_imps.hpp` File Reference

#### 6.306.1 Detailed Description

Contains an implementation class for `pat_trie`.

### 6.307 `insert_no_store_hash_fn_imps.hpp` File Reference

#### 6.307.1 Detailed Description

Contains implementations of `cc_ht_map_`'s insert related functions, when the hash value is not stored.

### 6.308 `insert_no_store_hash_fn_imps.hpp` File Reference

#### 6.308.1 Detailed Description

Contains implementations of `gp_ht_map_`'s insert related functions, when the hash value is not stored.

### 6.309 `insert_store_hash_fn_imps.hpp` File Reference

#### 6.309.1 Detailed Description

Contains implementations of `cc_ht_map_`'s insert related functions, when the hash value is stored.

### 6.310 `insert_store_hash_fn_imps.hpp` File Reference

#### 6.310.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions, when the hash value is stored.

### 6.311 `invoke.h` File Reference

#### 6.315.1 Detailed Description

This is a Standard C++ Library header.

### 6.316 iostream File Reference

#### Namespaces

- [std](#)

#### Macros

- `#define \_GLIBCXX\_IOSTREAM`

#### Variables

- static ios\_base::Init [std::\\_\\_ioinit](#)

#### Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/io.html> and the [I/O forward declarations](#)

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the section of the manual linked to above.

- istream [std::cin](#)

### 6.356.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

### 6.356.2 Macro Definition Documentation

#### 6.356.2.1 `__glibcxx_check_erase`

```
#define __glibcxx_check_erase(  
    _Position )
```

Verify that we can erase the element referenced by the iterator `_Position`. We can erase the element if the `_Position` iterator is dereferenceable and references this sequence.

Definition at line 145 of file macros.h.

#### 6.356.2.2 `__glibcxx_check_erase_after`

```
#define __glibcxx_check_erase_after(  
    _Position )
```

Verify that we can erase the element after the iterator `_Position`. We can erase the element if the `_Position` iterator is before a dereferenceable one and references this sequence.

Definition at line 159 of file macros.h.

#### 6.356.2.3 `__glibcxx_check_erase_range`

```
#define __glibcxx_check_erase_range(  
    _First,  
    _Last )
```

Verify that we can erase the elements in the iterator range `[_First, _Last)`. We can erase the elements if `[_First, _Last)` is a valid iterator range within this sequence.

Definition at line 173 of file macros.h.

**6.356.2.4 \_\_glibcxx\_check\_erase\_range\_after**

```
#define __glibcxx_check_erase_range_after(  
    _First,  
    _Last )
```

Verify that we can erase the elements in the iterator range (`_First`, `_Last`). We can erase the elements if (`_First`, `_Last`) is a valid iterator range within this sequence.

Definition at line 185 of file macros.h.

**6.356.2.5 \_\_glibcxx\_check\_heap\_pred**

```
#define __glibcxx_check_heap_pred(  
    _First,  
    _Last,  
    _Pred )
```

Verify that the iterator range [`_First`, `_Last`) is a heap w.r.t. the predicate `_Pred`.

Definition at line 335 of file macros.h.

**6.356.2.6 \_\_glibcxx\_check\_insert**

```
#define __glibcxx_check_insert(  
    _Position )
```

Verify that we can insert into `*this` with the iterator `_Position`. Insertion into a container at a specific position requires that the iterator be nonsingular, either dereferenceable or past-the-end, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the iterator is a `_Safe_iterator`.

Definition at line 79 of file macros.h.

**6.356.2.7 \_\_glibcxx\_check\_insert\_after**

```
#define __glibcxx_check_insert_after(  
    _Position )
```

Verify that we can insert into `*this` after the iterator `_Position`. Insertion into a container after a specific position requires that the iterator be nonsingular, either dereferenceable or before-begin, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the iterator is a `_Safe_iterator`.

Definition at line 96 of file macros.h.

### 6.356.2.8 \_\_glibcxx\_check\_insert\_range

```
#define __glibcxx_check_insert_range(  
    _Position,  
    _First,  
    _Last,  
    _Dist )
```

Verify that we can insert the values in the iterator range `[_First, _Last)` into `*this` with the iterator `_Position`. Insertion into a container at a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range `[_First, _Last)` is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the `_Position` iterator is a `_Safe_iterator`.

Definition at line 113 of file `macros.h`.

### 6.356.2.9 \_\_glibcxx\_check\_insert\_range\_after

```
#define __glibcxx_check_insert_range_after(  
    _Position,  
    _First,  
    _Last,  
    _Dist )
```

Verify that we can insert the values in the iterator range `[_First, _Last)` into `*this` after the iterator `_Position`. Insertion into a container after a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range `[_First, _Last)` is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the `_Position` iterator is a `_Safe_iterator`.

Definition at line 132 of file `macros.h`.

### 6.356.2.10 \_\_glibcxx\_check\_partitioned\_lower

```
#define __glibcxx_check_partitioned_lower(  
    _First,  
    _Last,  
    _Value )
```

Verify that the iterator range `[_First, _Last)` is partitioned w.r.t. the value `_Value`.

Definition at line 279 of file `macros.h`.

**6.356.2.11 \_\_glibcxx\_check\_partitioned\_lower\_pred**

```
#define __glibcxx_check_partitioned_lower_pred(  
    _First,  
    _Last,  
    _Value,  
    _Pred )
```

Verify that the iterator range [\_First, \_Last) is partitioned w.r.t. the value \_Value and predicate \_Pred.

Definition at line 301 of file macros.h.

**6.356.2.12 \_\_glibcxx\_check\_partitioned\_upper\_pred**

```
#define __glibcxx_check_partitioned_upper_pred(  
    _First,  
    _Last,  
    _Value,  
    _Pred )
```

Verify that the iterator range [\_First, \_Last) is partitioned w.r.t. the value \_Value and predicate \_Pred.

Definition at line 314 of file macros.h.

**6.356.2.13 \_\_glibcxx\_check\_sorted\_pred**

```
#define __glibcxx_check_sorted_pred(  
    _First,  
    _Last,  
    _Pred )
```

Verify that the iterator range [\_First, \_Last) is sorted by the predicate \_Pred.

Definition at line 245 of file macros.h.

**6.356.2.14 \_GLIBCXX\_DEBUG\_VERIFY\_AT**

```
#define _GLIBCXX_DEBUG_VERIFY_AT(  
    _Condition,  
    _ErrorMessage,  
    _File,  
    _Line )
```

Macros used by the implementation to verify certain properties. These macros may only be used directly by the debug wrappers. Note that these are macros (instead of the more obviously *correct* choice of making them functions) because we need line and file information at the call site, to minimize the distance between the user error and where the error is reported.

Definition at line 41 of file macros.h.

`_RankType &__offset, _Compare __comp=std::less< _Tp >())`

### 6.379.1 Detailed Description

Functions to find elements of a certain global `__rank` in multiple sorted sequences. Also serves for splitting such sequence sets.

The algorithm description can be found in

P. J. Varman, S. D. Scheufler, B. R. Iyer, and G. R. Ricard. Merging Multiple Lists on Hierarchical-Memory Multiprocessors. *Journal of Parallel and Distributed Computing*, 12(2):171177, 1991.

This file is a GNU parallel extension to the Standard C++ Library.

### 6.382.1 Detailed Description

Implementation of sequential and parallel multiway merge.

Explanations on the high-speed merging routines in the appendix of

P. Sanders. Fast priority queues for cached memory. ACM Journal of Experimental Algorithmics, 5, 2000.

This file is a GNU parallel extension to the Standard C++ Library.

### 6.382.2 Macro Definition Documentation

#### 6.382.2.1 \_GLIBCXX\_PARALLEL\_LENGTH

```
#define _GLIBCXX_PARALLEL_LENGTH(  
    __s )
```

Length of a sequence described by a pair of iterators.

Definition at line 54 of file multiway\_merge.h.

### 6.386.1 Detailed Description

This is a Standard C++ Library header.

The header `new` defines several functions to manage dynamic memory and handling memory allocation errors; see [http://gcc.gnu.org/onlinedocs/libstdc++/18\\_support/howto.html#4](http://gcc.gnu.org/onlinedocs/libstdc++/18_support/howto.html#4) for more.

### 6.386.2 Function Documentation

**6.386.2.1 operator delete()** [1/3]

```
void operator delete (  
    void * ) [noexcept]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.2 operator delete()** [2/3]

```
void operator delete (  
    void * ,  
    const std::nothrow_t & ) [noexcept]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.3 operator delete()** [3/3]

```
void operator delete (  
    void * ,  
    void * ) [inline], [noexcept]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 174 of file `new`.

**6.386.2.4 operator delete[]()** [1/3]

```
void operator delete[] (
    void * ) [noexcept]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.5 operator delete[]()** [2/3]

```
void operator delete[] (
    void * ,
    const std::nothrow_t & ) [noexcept]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.6 operator delete[]()** [3/3]

```
void operator delete[] (
    void * ,
    void * ) [inline], [noexcept]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 175 of file new.

**6.386.2.7 operator new()** [1/3]

```
void* operator new (
    std::size_t )
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.8 operator new()** [2/3]

```
void* operator new (
    std::size_t ,
    const std::nothrow_t & ) [nothrow]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.9 operator new()** [3/3]

```
void* operator new (
    std::size_t ,
    void * __p ) [inline], [nothrow]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 168 of file new.

**6.386.2.10** `operator new[]()` [1/3]

```
void* operator new[] (
    std::size_t )
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.11** `operator new[]()` [2/3]

```
void* operator new[] (
    std::size_t ,
    const std::nothrow_t & ) [nothrow]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.386.2.12** `operator new[]()` [3/3]

```
void* operator new[] (
    std::size_t ,
    void * __p ) [inline], [nothrow]
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 170 of file `new`.

### 6.399.1 Detailed Description

Parallel STL function calls corresponding to `stl_numeric.h`. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

`constexpr common_type_t<_Mn, _Nn> std::experimental::fundamentals\_v2::lcm (_Mn __m, _Nn __n)`

#### 6.400.1 Detailed Description

This is a TS C++ Library header.

#### 6.400.2 Function Documentation

##### 6.400.2.1 gcd()

```
template<typename _Mn, typename _Nn >
constexpr common_type_t<_Mn, _Nn> std::experimental::fundamentals_v2::gcd (
    _Mn __m,
    _Nn __n ) [noexcept]
```

Greatest common divisor.

Definition at line 56 of file experimental/numeric.

##### 6.400.2.2 lcm()

```
template<typename _Mn, typename _Nn >
constexpr common_type_t<_Mn, _Nn> std::experimental::fundamentals_v2::lcm (
    _Mn __m,
    _Nn __n )
```

Least common multiple.

Definition at line 74 of file experimental/numeric.

#### 6.429.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

##### Author

Bob Walters

Provides reusable `_Pointer_adapter` for assisting in the development of custom pointer types that can be used with the standard containers via the `allocator::pointer` and `allocator::const_pointer` typedefs.

#### 6.430 `policy_access_fn_imps.hpp` File Reference

##### 6.430.1 Detailed Description

Contains an implementation class for a `binary_heap`.

#### 6.431 `policy_access_fn_imps.hpp` File Reference

##### 6.431.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

#### 6.432 `policy_access_fn_imps.hpp` File Reference

##### 6.432.1 Detailed Description

Contains implementations of `cc_ht_map_`'s policy access functions.

#### 6.433 `policy_access_fn_imps.hpp` File Reference

##### 6.433.1 Detailed Description

Contains implementations of `gp_ht_map_`'s policy access functions.

#### 6.434 `policy_access_fn_imps.hpp` File Reference

##### 6.434.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

## 6.435 policy\_access\_fn\_imps.hpp File Reference

### 6.435.1 Detailed Description

Contains an implementation class for `ov_tree`.

## 6.436 policy\_access\_fn\_imps.hpp File Reference

### 6.436.1 Detailed Description

Contains an implementation class for `pat_trie`.

## 6.437 pool\_allocator.h File Reference

type __n)`

## 6.445.1 Detailed Description

Algorithms used by the profile extension.

This file is needed to avoid including `<algorithm>` or `<bits/stl_algo.h>`. Including those files would result in recursive includes. These implementations are oversimplified. In general, efficiency may be sacrificed to minimize maintenance overhead.

- `#define \_GLIBCXX\_VOLATILE`

### 6.461.1 Detailed Description

Lock-free double-ended queue. This file is a GNU parallel extension to the Standard C++ Library.

### 6.461.2 Macro Definition Documentation

#### 6.461.2.1 \_GLIBCXX\_VOLATILE

```
#define _GLIBCXX_VOLATILE
```

Decide whether to declare certain variable volatile in this file.

Definition at line 40 of file queue.h.

### 6.462.1 Detailed Description

Implementation of a unbalanced parallel quicksort (in-place). This file is a GNU parallel extension to the Standard C++ Library.

### 6.478.1 Detailed Description

This is a TS C++ Library header.

## 6.479 rb\_tree File Reference

### Classes

- `struct \_\_gnu\_cxx::rb\_tree< \_Key, \_Value, \_KeyOfValue, \_Compare, \_Alloc >`

## Namespaces

- [\\_\\_gnu\\_cxx](#)

## Macros

- `#define _RB_TREE`

### 6.479.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

## 6.480 rb\_tree.hpp File Reference

## Classes

- class [\\_\\_gnu\\_pbds::detail::rb\\_tree\\_map](#)< Key, Mapped, Cmp\_Fn, Node\_And\_It\_Traits, \_Alloc >

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_RB_TREE_BASE`
- `#define PB_DS_RB_TREE_BASE_NAME`
- `#define PB_DS_RB_TREE_NAME`
- `#define PB_DS_STRUCT_ONLY_ASSERT_VALID(X)`

### 6.480.1 Detailed Description

Contains an implementation for Red Black trees.

## 6.481 rc.hpp File Reference

## Classes

- class [\\_\\_gnu\\_pbds::detail::rc](#)< \_Node, \_Alloc >

## Namespaces

- [\\_\\_gnu\\_pbds](#)

### 6.481.1 Detailed Description

Contains a redundant (binary counter).

## 6.482 rc\_binomial\_heap.hpp File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::rc\\_binomial\\_heap< Value\\_Type, Cmp\\_Fn, \\_Alloc >](#)

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_RC_C_DEC`

### 6.482.1 Detailed Description

Contains an implementation for redundant-counter binomial heap.

## 6.483 rc\_string\_base.h File Reference

### Classes

- class [\\_\\_gnu\\_cxx::\\_\\_rc\\_string\\_base< \\_CharT, \\_Traits, \\_Alloc >](#)

## Namespaces

- [\\_\\_gnu\\_cxx](#)

### 6.483.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/vstring.h>`.

## 6.484 refwrap.h File Reference

## Classes

- struct [std::\\_Maybe\\_get\\_result\\_type<\\_Functor, typename >](#)
- struct [std::\\_Maybe\\_unary\\_or\\_binary\\_function<\\_Res, \\_ArgTypes >](#)
- struct [std::\\_Maybe\\_unary\\_or\\_binary\\_function<\\_Res, \\_T1 >](#)
- struct [std::\\_Maybe\\_unary\\_or\\_binary\\_function<\\_Res, \\_T1, \\_T2 >](#)

- struct [std::\\_Weak\\_result\\_type\\_impl<\\_Res\(\\_ArgTypes...\) \\_GLIBCXX\\_NOEXCEPT\\_QUAL >](#)
- struct [std::\\_Weak\\_result\\_type\\_impl<\\_Res\(\\_ArgTypes.....\) \\_GLIBCXX\\_NOEXCEPT\\_QUAL >](#)
- class [std::reference\\_wrapper<\\_Tp >](#)

## Namespaces

- [std](#)

## Macros

- `#define \_GLIBCXX\_MEM\_FN\_TRAITS(_REF, _LVAL, _RVAL)`
- `#define \_GLIBCXX\_MEM\_FN\_TRAITS2(_CV, _REF, _LVAL, _RVAL)`

## Functions

- `template<typename _Tp >`  
`reference_wrapper<_Tp > std::ref (_Tp &__t) noexcept`
- `template<typename _Tp >`  
`reference_wrapper< const _Tp > std::cref (const _Tp &__t) noexcept`
- `template<typename _Tp >`  
`void std::ref (const _Tp &&)=delete`
- `template<typename _Tp >`  
`void std::cref (const _Tp &&)=delete`
- `template<typename _Tp >`  
`reference_wrapper<_Tp > std::ref (reference_wrapper<_Tp > __t) noexcept`
- `template<typename _Tp >`  
`reference_wrapper< const _Tp > std::cref (reference_wrapper<_Tp > __t) noexcept`

## 6.484.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<functional>`.

## 6.485 regex File Reference

### Macros

- `#define _GLIBCXX_REGEX`

### 6.485.1 Detailed Description

This is a Standard C++ Library header.

## 6.486 regex File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_EXPERIMENTAL_REGEX`

### 6.486.1 Detailed Description

This is a TS C++ Library header.

## 6.487 regex.h File Reference

### 6.540.1 Detailed Description

Parallel implementations of set operations for random-access iterators. This file is a GNU parallel extension to the Standard C++ Library.

## 6.541 settings.h File Reference

### Classes

- struct [\\_\\_gnu\\_parallel::\\_Settings](#)

### Namespaces

- [\\_\\_gnu\\_parallel](#)

### Macros

- `#define \_GLIBCXX\_PARALLEL\_CONDITION(__c)`

### 6.541.1 Detailed Description

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

## 6.541.2 parallelization\_decision

The decision whether to run an algorithm in parallel.

There are several ways the user can switch on and \_\_off the parallel execution of an algorithm, both at compile- and run-time.

Only sequential execution can be forced at compile-time. This reduces code size and protects code parts that have non-thread-safe side effects.

Ultimately, forcing parallel execution at compile-time makes sense. Often, the sequential algorithm implementation is used as a subroutine, so no reduction in code size can be achieved. Also, the machine the program is run on might have only one processor core, so to avoid overhead, the algorithm is executed sequentially.

To force sequential execution of an algorithm ultimately at compile-time, the user must add the tag `gnu_parallel↵::sequential_tag()` to the end of the parameter list, e. g.

```
std::sort(__v.begin(), __v.end(), __gnu_parallel::sequential_tag());
```

This is compatible with all overloaded algorithm variants. No additional code will be instantiated, at all. The same holds for most algorithm calls with iterators not providing random access.

If the algorithm call is not forced to be executed sequentially at compile-time, the decision is made at run-time. The global variable `__gnu_parallel::_Settings::algorithm_strategy` is checked. It is a tristate variable corresponding to:

a. `force_sequential`, meaning the sequential algorithm is executed. b. `force_parallel`, meaning the parallel algorithm is executed. c. `heuristic`

For heuristic, the parallel algorithm implementation is called only if the input size is sufficiently large. For most algorithms, the input size is the (combined) length of the input sequence(`__s`). The threshold can be set by the user, individually for each algorithm. The according variables are called `gnu_parallel::_Settings::[algorithm]_minimal_n`.

For some of the algorithms, there are even more tuning options, e. g. the ability to choose from multiple algorithm variants. See below for details.

## 6.541.3 Macro Definition Documentation

## 6.541.3.1 \_GLIBCXX\_PARALLEL\_CONDITION

```
#define _GLIBCXX_PARALLEL_CONDITION(
    __c )
```

Determine at compile(?)-time if the parallel variant of an algorithm should be called.

## Parameters

<code>↵</code>	A condition that is convertible to bool that is overruled by <code>__gnu_parallel::_Settings::algorithm_strategy</code> .
<code>__c</code>	Usually a decision based on the input size.

Definition at line 95 of file settings.h.

### 6.578.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<algorithm>`.

### 6.578.2 Function Documentation

#### 6.578.2.1 \_\_rotate() [1/3]

```
template<typename _ForwardIterator >
_FowardIterator std::_V2::__rotate (
    _ForwardIterator __first,
    _ForwardIterator __middle,
    _ForwardIterator __last,
    forward_iterator_tag )
```

This is a helper function for the rotate algorithm.

Definition at line 1249 of file `stl_algo.h`.

References `std::_V2::__rotate()`, and `std::iter_swap()`.

Referenced by `std::_V2::__rotate()`.

#### 6.578.2.2 `__rotate()` [2/3]

```
template<typename _BidirectionalIterator >
_BidirectionalIterator std::_V2::__rotate (
    _BidirectionalIterator __first,
    _BidirectionalIterator __middle,
    _BidirectionalIterator __last,
    bidirectional_iterator_tag )
```

This is a helper function for the rotate algorithm.

Definition at line 1290 of file `stl_algo.h`.

References `std::_V2::__rotate()`.

#### 6.578.2.3 `__rotate()` [3/3]

```
template<typename _RandomAccessIterator >
_RandomAccessIterator std::_V2::__rotate (
    _RandomAccessIterator __first,
    _RandomAccessIterator __middle,
    _RandomAccessIterator __last,
    random_access_iterator_tag )
```

This is a helper function for the rotate algorithm.

Definition at line 1328 of file `stl_algo.h`.

References `std::_V2::__rotate()`.

### 6.582.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<deque>`.

### 6.582.2 Macro Definition Documentation

#### 6.582.2.1 `_GLIBCXX_DEQUE_BUF_SIZE`

```
#define _GLIBCXX_DEQUE_BUF_SIZE
```

This function controls the size of memory nodes.

#### Parameters

<code>__size</code>	The size of an element.
---------------------	-------------------------

#### Returns

The number (not byte size) of elements per node.

This function started off as a compiler kludge from SGI, but seems to be a useful wrapper around a repeated constant expression. The **512** is tunable (and no other code needs to change), but no investigation has been done since inheriting the SGI code. Touch `_GLIBCXX_DEQUE_BUF_SIZE` only if you know what you are doing, however: changing it breaks the binary compatibility!!

Definition at line 88 of file `stl_deque.h`.

#### 6.585.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iterator>`.

This file implements `reverse_iterator`, `back_insert_iterator`, `front_insert_iterator`, `insert_iterator`, `__normal_iterator`, and their supporting functions and overloaded operators.

- `template<class _Tp>`  
`bool std::rel_ops::operator>= (const _Tp &__x, const _Tp &__y)`

#### 6.597.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<utility>`.

Inclusion of this file has been removed from all of the other STL headers for safety reasons, except `std::utility.h`. For more information, see the thread of about twenty messages starting with <http://gcc.gnu.org/ml/libstdc++/2001-01/msg00223.html>, or [http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous\\_overloads](http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous_overloads)

Short summary: the `rel_ops` operators should be avoided for the present.

#### 6.625.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains two exception-generating types (`throw_value`, `throw_allocator`) intended to be used as value and allocator types while testing exception safety in templated containers and algorithms. The allocator has additional log and debug features. The exception generated is of type `forced_exception_error`.

## 6.626 time\_members.h File Reference

## 6.648.1 Detailed Description

This is a Standard C++ Library header.

## 6.648.2 Macro Definition Documentation

### 6.648.2.1 \_GLIBCXX\_HAS\_NESTED\_TYPE

```
#define _GLIBCXX_HAS_NESTED_TYPE(  
    _NTYPE )
```

Use SFINAE to determine if the type `_Tp` has a publicly-accessible member type `_NTYPE`.

Definition at line 2354 of file `type_traits`.

### 6.676.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

### 6.677.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

## 6.678 valarray\_array.tcc File Reference

### Namespaces

- [std](#)

### Macros

- `#define VALARRAY_ARRAY_TCC`

## Functions

### 6.689.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of work-stealing.

Work stealing is described in

R. D. Blumofe and C. E. Leiserson. Scheduling multithreaded computations by work stealing. *Journal of the ACM*, 46(5):720748, 1999.

This file is a GNU parallel extension to the Standard C++ Library.
